author/company : John Harris
available..... : umich
package....... : assembler, menu, editor, monitor, docs
features...... : macros, source include, data include,
conditional assembly
Two pass 6502/65816 assembler with integrated editor/
monitor. Extra RAM supported.

- NASM65 (disk)
version, year : ?, 1992
author/company : Nat!
available..... : ?
package....... : assembler, linker, librarian
features...... : macros, relocation, source include
One pass 6502 portable cross assembler (initially for
the ST). Highly compatible with MAC/65.

- PC-65 (disk)
version, year : 1.0 beta, 1996
author/company : Jan Feenstra & Freddy Offenga
available..... : -
package....... : assembler
features...... : macros, source include, data include,
boundary directive
Two pass 6502 cross assembler for the PC. The source
format is highly compatible with the ST-65 assembler.

- Quick Assembler (disk)
version, year : 1.0, 1990?
author/company : JBW, Avalon?
available..... : ?
package....... : assembler, editor, menu, debugger
features...... : source include
Two pass 6502 cross assembler with integrated editor.
Very user friendly menu environment.

- Ra65 (disk)
version, year : 1.0, 1989
author/company : John R. Dunning
available..... : public domain, umich
package....... : assembler, linker, librarian
part of cc65 (c-compiler)
features...... : ?

- Synassembler (disk|cart)
version, year : ?, 1982
author/company : Steve Hales, Synapse Soft

available..... : http://www.atariland.com/members/oldatarian/
package..... : assembler, editor, monitor, manual
features..... : source include
Two pass 6502 assembler.

- ST-65 (disk)
version, year : ?, 1991
author/company : A. Stauffenberg, F. Offenga
available..... : -
package..... : assembler, menu shell, manual
features..... : macros, conditional assembly,
source include, data include,
boundary directive
Two pass 6502/65c02 cross assembler for the Atari ST
written in 68000 assembly. As far as I know this is
the first assembler with the boundary directive.

- X-Assembler (xasm)
version, year : 2.5.2, 2002
author/company : Piotr Fusik
available..... : http://xasm.atari.org
package..... : assembler, docs
features..... : conditional assembly, source include,
binary include, pseudo commands,
pseudo addressing modes
Two pass 6502 cross assembler for PC. The source
format is backward compatible with Quick Assembler.

b) BASIC

- A BASIC Compiler (?)
version, year : 1.05, 1987
author/company : Monarch Data Systems
available..... : ?
package..... : BASIC compiler
features..... : ?

- Advan BASIC (disk)
version, year : ?, ?
author/company : Advan Language Designs
available..... : ?
package..... : BASIC compiler
features..... : ?

- Atari 800 Basic (disk)
version, year : 1.0, 1981
author/company : Microsoft
available..... : ?
package..... : ?
features..... : ?

- Atari BASIC (cart)
version, year : Rev.C, 1983
author/company : Atari
available..... : standard ROM in Atari XL/XE
package..... : BASIC interpreter, manual
features..... : pretty plain BASIC implementation

- Atari Microsoft BASIC II (cart)
version, year : ?, 1991
author/company : Atari
available..... : ?
package..... : BASIC interpreter
features..... : ?

- BASIC A+ (disk)
version, year : 3.05, 1981
author/company : OSS
available..... : ?
package..... : BASIC interpreter
features..... : ?

- BASIC XL (cart)
version, year : ?, ?
author/company : OSS
available..... : ?
package..... : BASIC interpreter
features..... : ?

- BASIC XE (cart)
version, year : ?, 1985
author/company : OSS
available..... : ?
package..... : BASIC interpreter
features..... : ?

- CTH Fast Basic (disk)
version/year : ?
author/company : Tom Hunt/Closer to Home
avaiable.....: PD, Freeware or Shareware;
package.....: language plus several test files
and examples; english docs;
features.....: faster than Atari Basic, not much
slower than TB, does not use Ram under OS;
avaiable at Tom Hunt's homepage or elsewhere...

- Der BASIC Compiler (?)
version, year : ?, 1983
author/company : Datasoft
available..... : ?
package..... : BASIC compiler
features..... : ?

- Frost BASIC (?)
version, year : 1.04, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package..... : BASIC interpreter, compiler
features..... : ?
Version of Turbo Basic XL that runs on 48k machines (400/800).

- MMG BASIC Compiler 2.0 (?)
version, year : 2.0, 1984
author/company : Special Software Systems
available..... : ?
package..... : BASIC compiler
features..... : ?
It appears that this is a newer version of Der BASIC Compiler,
licensed to some other company.

- TT-BASIC XL (disk)
version, year : 2.11, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package..... : BASIC interpreter, compiler
features..... : ?
Published in the German magazine "Happy Computer".
Appears to be a newer version of Turbo Basic XL.

- Turbo Basic XL (disk)
version, year : 1.5, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package..... : BASIC interpreter, compiler (V1.1)
features..... : ?
Published in the German magazine "Happy Computer".

c) C

- ACE C (disk)
version, year : ?
author/company : John Palevich & Ralph Walden
available..... : ?
package..... : ?
features..... : ?
This is a newer version of 'Deep Blue C'.

- C/65 (?)
version, year : ?
author/company : OSS
available..... : ?
package..... : ?
features..... : ?
Probably derived from Dr.Dobbs "Small C". Compiles to 6502
code which emulates the 8080 instruction set.

- C65 (?)
version, year : ?
author/company : Keith Ledbetter
available..... : ?
package....... : ?
features...... : good macro assembler
This compiler does not support structs.

- CC65 (disk)
version, year : 1989
author/company : John R. Dunning
available..... : umich archive,
http://www.umich.edu/~archive/atari/8bit/Languages/Cc65/
package....... : compiler, linker, assembler, librarian
features...... : ?
Public domain compiler. Also used as cross compiler.
Relocatable object linkage files, and the most thorough
K&R C for the 8-bit. Comes with an relocatable assembler.

- CC8 (disk)
version, year : 2.3
author/company : John Palevich & Steve Kennedy
available..... : ?
package....... : Compiler
features...... : ?
ACE C with more "real" C support (e.g. arrays of pointers
to structs). Requires ACE C runtime libs and linker.

- Deep Blue C (disk)
version, year : 1.2, 1982
author/company : John Palevich, APX
available..... : http://www.atariarchives.org/APX/showinfo.php?cat=20166
Source code "Deep Blue Secrets" downloadable at
http://www.atariarchives.org/APX/showinfo.php?cat=20179
package....... : Compiler, Linker
features...... : ?
Deep Blue C was originally an independent product, but it
then became available from APX. It converts C to pseudo-
code and then interprets the pseudo code (8080 instruction
set emulation).
Drawn from Ron Cain's public domain C-compiler (Small-C).

- DVC C (disk)
version, year : 1.05, 1985
author/company : Ralph E. Walden
available..... : ?
package....... : Editor, Compiler, Optimizer, Linker
features...... : Quite user friendly program
The compiler generates special object files (.CCC)
which can be optimized and linked. The package uses a
special DOS called DVC DOS which contains runtime stuff.

- LightSpeed C (disk)
version, year : 1.08, 1986
author/company : Clearstar Softechnology
available..... : ?
package..... : Compiler, Optimizer, Linker
features..... : ?
Runs under CLI DOS's and MENU DOS's.

- Tiny-C
version, year : ?
author/company : OSS
available..... : ?
package..... : ?
features..... : ?
First sold C compiler by OSS. This compiler was used to
compile itself! First true language "bootstrap" on any
8-bit machine (it was also available for Apple and CP/M
machines). Derived from Dr.Dobbs "Small C". Compiles to
6502 code which emulates the 8080 instruction set.

d) PASCAL

- Atari Pascal (disk)
version, year : 1.0, 1982
author/company : APX
available..... : APX-20102
Information at http://www.atariarchives.org/APX/showinfo.php?cat=20102
package..... : ?
features..... : ?
Needs two drives.

- Draper Pascal (disk)
version, year : 2.1, 1989
author/company : Norm Draper
available..... : ?
package..... : ?
features..... : ?

- Kyan Pascal (disk)
version, year : 1986
author/company : Kyan Software, APX
available..... : ?
package..... : editor, compiler, linker, macro-assembler
and manual
features..... : ?
Kyan Pascal would run off a single floppy. The Atari (APX)
version needs two drives. A version which runs entirely in
128k should be available too.

e) LISP

- INTER-LISP/65 (disk)
version, year : 2.1, 1981

author/company : Special Software Systems, DataSoft
available..... : ?
package....... : ?
features...... : ?

f) FORTH

- ES-FORTH
version, year : 1.2, 1984
author/company : The English Software Company
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthESForth
package....... : ?
features...... : says Carsten Strotmann:"Seems to be based an fig-FORTH,
but with some unique "Words". Works with normal DOS.

- Extended fig-FORTH, (disk)
version, year : 11/10/1981
author/company : Patrick Mullarky, APX
available..... : APX-20029
http://www.atariarchives.org/APX/showinfo.php?cat=20029
package....... : ?
features...... : ?

- Extended fig-FORTH, (disk)
version, year : 1.1 Rev. 2.0, 01/15/82
author/company : Patrick L. Mullarky, APX
available..... : APX-20029
http://www.atariarchives.org/APX/showinfo.php?cat=20029
http://www.strotmann.de/twiki/bin/view/APG/LangForthFigOneOne
package....... : ?
features...... : ?

- fig-FORTH (disk)
version, year : 1.0D
author/company : ?
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthFigOneZeroD
package....... : ?
features...... : ?

- fig-FORTH
version, year : 1/26/81 and 4/01/82 releases
author/company : Steven R. Calfee "Team FORTH"
available..... : ?
package....... : ?
features...... :
http://www.atariarchives.org/APX/showinfo.php?cat=unknown_fig

- fig-FORTH
version, year : 4/10/82
author/company : Peter Lipson / Robin Ziegler "Team FORTH"

available..... : ?
package..... : ?
features..... : based on 4/1/82 release of fig-FORTH by Steve Calfee

- fig-FORTH
version, year : 5/5/82 - 10/16/82
author/company : Harald Striepe "Team FORTH"
available..... : ?
package..... : ?
features..... : based on 4/10/82 release of fig-FORTH by Lipson/Ziegler

- fig-FORTH, Antic (disk)
version, year : 1.4S REV.H, 18Jun85
author/company : John Stanley/Antic Magazine "Team FORTH"
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthAntic
package..... : ?
features..... : based on 10/16/82 release of fig-FORTH by Striepe

- fun-FORTH (disk)
version, year : ?
author/company : Joel Gluck, APX
available..... : APX-20146
http://www.atariarchives.org/APX/showinfo.php?cat=20146
package..... : ?
features..... : ?

- Grafik-FORTH
version, year : 1990
author/company : RAI Production
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthGraphicForth
package..... : ?
features..... : based on fig-FORTH 1.4S and TURBO-GRAPHICS-SYSTEM 256

- MesaForth
version, year : 12/03/81
author/company : ?
available..... :http://www.strotmann.de/twiki/bin/view/APG/LangForthMesa
package..... : language, source code, documents, examples
features..... : based on 6502 fig-Forth. The major difference is in
the size of the screen on disk (512 bytes instead of
1024 bytes). Runs under ATARI DOS 2.0S.

- QS FORTH
version, year : 1.0, 3/27/81
author/company : James Abanese / [QS] Quality Software
available..... : http://www.strotmann.de/twiki/bin/view/APG/LangForthQS
package..... : Editor, Assembler, I/O routines
Single Density 5.25 Floppy and Manual in Binder
features..... : Editor, Assembler, I/O Routines. based on fig-FORTH.

- turbo-4th
version, year : January 1985
author/company : Steven R. Calfee
available..... : ?
package..... : ?
features..... : compatible with fig-FORTH and Team FORTH. It's fast.
Not threaded, it is a true compiler

- ValForth (disk)
version, year : 1.1, 1982
author/company : Valpar International
available..... : ?
package..... : (8) disks in the set including: 1)master disk,
2)display formatter, 3)text compression and auto text formatting,
4)valDOS-I, 5)valDOS-II, 6)player-missile graphics, character editor and
sound editor, 7)general utilities and video editor, 8) Turtle &
valGraphics and advanced floating point routines.
features..... : based on fig-FORTH

- X-FORTH
version, year : 26 Jan 2003
author/company : Carsten Strotmann
available..... : http://www.strotmann.de/twiki/bin/view/APG/ProjXForth
package..... : binary, source, disk image with samples & editor
features..... : aims to be compatible with new ANSI standard.
works with normal DOS.

g) PILOT

- Atari PILOT (cart)
version, year : 1980
author/company : Atari
available..... : ?
package..... : ?
features..... : ?

h) LOGO

- Atari LOGO (cart)
version, year : 1983
author/company : LCSI, Atari
available..... : ?
package..... : ?
features..... : ?

i) All the rest

- Action! (cart)
version, year : 1983
author/company : OSS
available..... : ?
package..... : compiler, editor, monitor and library
features..... : fast compiler which generates good code
Needs cartridge for runtime procedures. A PD runtime

library is also available.
All variables are static, so recursive routine calls
are not possible. No floating point type (though a
PD library should make this possible). No arrays of
objects (arrays of POINTERS to objects are possible).

- Extended WSFN, WSFN = Which Stands For Nothing
version, year : ?
author/company : Harry Stewart, APX
available..... : APX-20026
package....... : ?
features...... : ?
Info at http://www.atariarchives.org/APX/showinfo.php?cat=20026

- Quick (disk)
version, year : 2.0, 1990
author/company : Raindorf Soft
available..... : ?
package....... : ?
features...... : ?
This is the "poor man's Action!". Same restrictions as
Action! apply also to Quick. Further restrictions are:
only simple assignment expressions, no records and no
pointers.

- PL65 (disk)
version, year : 1.0, 1987
author/company : Noahsoft
available..... : commercial, Extremely rare.
package....... : compiler, editor, library, sample game
features...... : Similar features to Action with same restrictions.
Highly flexible language that includes inline assembler features and
pointers. Robust and well-engineered editor. Does not require
additional runtime library - automatically generated and included in
the compiled code during compilation.

- Test Computer Language (disk)
version, year : 2.2, 1985-1990
author/company : D.Firth
available..... : public domain, ?
package....... : compiler and editor
features...... : ?

Subject: 8.2) What cartridges were released for the Right Slot of the 800?

Contributors: Gene, Larry White, others

Austin Franklin Austin 80 Console Software
Eastern House KISS
Eastern House Monkey Wrench
Eastern House Monkey Wrench II

Geminisoft/Sar-An Magic Dump
Geminisoft Magic Dump II
Radical Systems Cartridge Maker (eprom burner)
Block (first right cart/first "backup" program hardware device)
R-Time 8 ICD (battery-backed clock, for left or right cart slots)
Real Time Cartridge Sunmark, http://www.sunmark.com/

Subject: 8.3) What games support 4 or more simultaneous players?

Contributors to this section: Jeff M Lodoen, Vidar \"Hawk\" Olavesen, Pat Mulvey, Steven E. Posey (Party Quiz), Andreas Magenheimer, Florian Dingler

a) The following games support 3 simultaneous players:
(2 players via joystick, 1 player via keyboard)

- Dynakillers by GMG/Slovakia (Freeware!)
- Blastermind by Numbercruncher/Germany (Freeware!)
- M.U.L.E. cracked+changed by CSS/Germany (pirate copy!)
- some more PD and commercial games...

b) The following games support 4-joystick head-to-head play:
(Only the 400 and 800 computer models sport 4 controller ports)

- Asteroids cart. by Atari,
- Basketball cart. by Atari,
- Dandy disk by APX,
- M.U.L.E. disk by ECA,
- Maze War disk or cart. by ???,
- Silicon Warrior disk or tape by Epyx,
- Survivor disk or cart. by Synapse,
- Major League Soccer cart. by Thorn EMI,
- Major League Hockey cart. by Thorn EMI,
- Volleyball by ???
(PD game written in Atari BASIC);
- Tank Battle by ??? from Antic magazine
- Roadblock by Brian Holness from Compute! magazine
- Battle Room (CIA vs. KGB) a PD game by SNACC
- Aliens a PD-game by ??? using an altered Dandy program
(the Dandy font and thus the graphics were changed, however,
the levels remain the same and can be used in both games);
- Sky Warrior by ??? from ROM magazine, June 1984 ***
- Depth Warrior by ??? from ROM magazine, Aug. 1984 ***
- Yellow-Brick-Road by ??? from ROM magazine, Feb. 1984 ***

*** these programs are reported to be 4-player programs, I'm
not sure if they are meant to be 4-players simultaneously
or 4-players - one after another (try to find out!);

c) The following games support 8 players on the 400/800 or 4 on the other computer models, using the 2 controllers-per-port CX30 Paddle controllers:

- Super Breakout by Atari,
- Worms by Electronic Arts
(has nothing to do with the PC game!)

d) The following game supports 4 players on all machines, using special
4-button keypad controllers linked together with RJ-11 jacks (standard
phone jacks) to a box with 2 joystick port connectors:

- Party Quiz by Suncom

e) The following programs support multi-joystick games, using extra
hardware called Quadrotron (from the german Atari magazin 2/1989):

- test program for 4 joysticks (and assembler source);
- Quadro-Tron by H.Schoenfeld (4-player Tron-clone);

f) The following programs support multi-joystick games, using extra
hardware called Multijoy (multijoy4 for up to 4 players, multijoy8
for up to 8 players and multijoy16 for up to 16 players; originally
developed by Raster/Radek Sterba, but also available from ABBUC):

- Cervi by R.Sterba (up to 8-players Snake-clone);
- Multijoy by R.Sterba (up to 4 players Tetris-clone)
- Bremspunkt by T.Butschke (up to 4 players Car-race);
- Sheeprace by F.Dingler (1 to 8 players Sheep-race);
- Cardgrabber by F.Dingler (2 to 8 players grab-a-card-game);
- Ice-Hockey by F.Dingler (4 to 8 players Icehockey-game);
- Quadrotron-M4 by R.Sterba (patched Quadro-Tron for Multijoy);
- Shoot Em' All by R.Sterba (16 players shooting-game)

Subject: 8.4) What programs run only on the 400 and 800 models, and why?

The following are reported as incompatible with models other than the
original Atari 400/800. Most probably do work on XL/XE's if you use a
translator to run the original 400/800 OS on your XL/XE.

Apple Panic Broderbund
Aquatron Sierra On-Line
Astro Chase (by First Star Software) Parker Bros.
Atari Word Processor Atari
(this is not the same as AtariWriter!)
Atlantis (some versions!) Imagic
Attack at EP-CYG-4 (by Bram) Romox
Bacterion! Kyle Peacock/Tom Hudson/ANALOG#20
(http://www.cyberroach.com/analog/an20/bacterion.htm
patch for XL/XE available:
http://www.cyberroach.com/analog/an20/bacterion_patch.htm)
Bandits Sirius Software
BearJam Chalkboard
Boulders And Bombs CBS
Chicken Synapse
Dancing Feats (by Softsync) Romox

Demon Attack Imagic
Dreadnaught Factor, The Activision
Drelbs Synapse
File Manager 800+ Synapse
Forbidden Forest Cosmi
(later versions by different companies work ok on XL/XE!)
Fort Apocalypse Synapse
(cart version is 400/800 only! tape+disk versions work ok on XL/XE!)
Galahad And The Holy Grail APX
(Downloadable: http://www.atariarchives.org/APX/showinfo.php?cat=20132)
Go Hayden
Gorf Roklan
Jawbreaker II Sierra On-Line
Jet Boot Jack English Software
(can be found on various tapes/disks; at least the re-release
version by Byte Back works alright on XL/XE computers!)
Juggler IDSI
K-Razy Antiks K-Byte
K-razy Kritters CBS
K-razy Kritters K-Byte
Kangaroo Atari prototype
KoalaPainter Koala
Leo's 'Lectric Paintbrush Chalkboard
Leo's Links Chalkboard
Letter Perfect (before v6) LJK

Squish 'Em Sirius
Super Pac-Man Atari prototype

Synassembler Synapse
Text Wizard Datasoft
Zaxxon (early release only!) Datasoft

Konrad M.Kokoszkiewicz writes:

XL/XE software won't work on 400/800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Andreas Magenheimer adds:

To get an overview or see a chart of OS changes from the 800 to the XL
line, refer to Antic magazine Volume 3, Number 2 (June 1984), pages 10-14;
(online: http://www.atarimagazines.com/v3n2/insideatari.html)
Also note, that some software will not work correct (or not at all) on
newer XE/XEGS versions (which have a new OS with a new version number,
a new selftest/memory-test/keyboard-test, larger RAM chips, etc. etc.);

Thomas Richter contributes further details (16 Jan 2004):

There are a couple of reasons why some games don't run on the XL/XE
models. I try to order them by "likeliness", of course biased by my
personal observations:

i) The printer buffer of the XL Operating System in page 3 is a couple
of bytes shorter. The additional bytes are used for extended OS
variables not available in the 800 series. Most prominent is the $3fa
location, holding a shadow register of GTIA's TRIG3 signal. While a
true joystick trigger line in the 400/800 series, this signal is used
as "cart inserted" signal for XL/XE models. Unfortunately, the OS
compares GTIA trig3 with the shadow register at $3fa in each vertical
blank, running into an endless loop if the register contents don't
match. This causes hangs for games using page 3 either as copy-buffer
or for player-missile graphics. (Hangs by Ms. Pac-Man and
Bacterion! are caused by this, and many others...) This is "fixable"
either by the translator disk, or by a quick hack into the game,
replacing the OS vertical blank or poking TRIG3 frequently into its
shadow. The reason for the OS behaviour might be that Atari wanted to
prevent crashes if the cartridge is inserted or removed while the
machine is running. The 400/800 is powered down when a cart is
inserted, the XL/XE lacks the cover of the older models that triggered
a little switch to interrupt the power line.

ii) Similar to the above, writes to $3f8. This OS equate defines
whether on a warm start, the BASIC ROM shall be mapped back in. If
its contents are altered, a program triggering a reset as part of its
initialization will find itself then with 8K less RAM occupied by
a BASIC ROM, making it crash. Similarly, writes to the cartridge checksum

$3eb could cause a cold-start on a "reset initialization". This is
fixable by the translator disk.

iii) Some games use a four-joystick setup, or at least initialize
PIA itself. If this happens inadequately, PIA Port B, bit 0 gets changed,
disabling the ROM, and thus crashing the machine. This is not fixable
by the translator since it is a hardware issue.

iv) Direct jumps into the OS ROM, not using the documented vectors in
the $e450 area. Interestingly, this fault is not as common as it may
sound since games hardly ever use the OS. It causes failures of
some "serious applications", most notably "QS Forth" and applications
compiled by it. This is fixable by the translator disk.

As a side remark, it is interesting to note that no such documented
jump-ins exist for the math-pack ($d800 to $dfff). It is not really
part of the OS, but looks more like a part of the BASIC interpreter
that didn't make it into the OS because there was no room left. Thus,
direct jump-ins have to be used here that are documented in the De Re
Atari (for example). Atari never changed them, but it seems likely
that this documentation happened more or less as an accident since the
same source also lists some mathematics-related jump-ins into the
Basic (namely, to compute SIN and COS and related) that are only valid
for the Rev. A BASIC. Thus, the math pack might be a couple of
routines that have been originally intended for "private use" of the
BASIC ROM, but then have been found "too useful" by many others to
remain "closed". Otherwise, it is hard to explain why the otherwise
pretty cleaned-up OS comes with a construction like this.

Subject: 8.5) What programs make use of the Light Gun or a light pen?

Bertrand M. (LEXX) writes:

- Bug Hunt cart. by Atari;
- Barnyard Blaster cart. by Atari;
- Crossbow cart. by Atari;
- Crimebuster cart. by Atari;
- Operation Blood disk by ANG/Mirage;
- Operation Blood II - Special Forces disk by ANG/Mirage;
- Light Gun Blaster (PD from Page 6);
- enhanced Lightgun Blaster (PD from Pedrokko);
- Gangsterville disk by Linda Soft
(an italian game written in BASIC);
- maybe a couple more...

James Bradford mentions:
"On the 400, the light gun /pen will only work in joystick port 4."
This renders much light gun and light pen software unusable on the 400.

Andreas Magenheimer adds:
All Lightgun games can be used with a lightpen (which is not as accurate

as a Lightgun however). And all lightpen programs can be used with a
lightgun. thus add:

- Atari Graphics cart. by Atari
(a painting/drawing program);
- Matrix a PD game by Dave Oblad
(a 4-wins or 5-wins clone!)
- Alien Invaders disk by R.Gore (available from DGS);
- Bembelwo a PD game by Thorsten Butschke
(a sort of golf/minesweeper game, written in Quick);
- Sharp Shooter by Mat*Rat a PD game from Analog,
(also available on cart from Video 61/Lance Ringquist);
- Lightgun Shooter by ??? from ABBUC mag.
(a simple shooter game, at least PD!)
- Flyshot or Flyshoot a PD game by Kemal Ezcan
(a Turbo BASIC game from ZONG, the KE Soft magazine);
- Geisterschloss game+editor disk by KE Soft;
- Lightpen Doodle by ??? from Antic magazine;
- some more PD programs and utilities for Lightpen or Lightgun;

Subject: 8.6) What programs have a track ball mode or support a mouse?

Contributors: Andreas Magenheimer, Mirko Sobe

Title Keystroke Required
-------------- ----------
- Missile Command by Atari CTRL-T
- Slime by Synapse [T]
- Shanghai by Activision choose controller type: ST mouse !
(plug it into port 2; if you do not
have one, you have to reboot!!)
- Bombdown by Roemer of Uno choose between Joystick, Amiga
mouse, ST mouse or CX85 numeric
keypad (use port 2 for any mice)
- Minesweeper by Raindorf-Soft use an ST mouse in port 2
- The Brundles by KE-Soft use an ST mouse in port 2
- The Brundles Editor by KE-Soft, PD use an ST mouse in port 2
- Geisterschloss by KE-Soft, PD choose Lightgun (port 1) or ST
mouse (port 2)
- Vanish (ZONG, Vol. 5+6/1993); use an ST-mouse in port 2
- Hong Kong (ZONG, Vol. 5+6/1993); use an ST-mouse in port 2
- Maus-DOS (ZONG 5+6/1993); use an ST-mouse in port 2
- Faecher-Patience (ZONG 1/1993); use an ST-mouse in port 2
- Macao (Zong 5+6/1994); use an ST-mouse in port 2
- Multi-Mouse manager (PD) drivers for mice, TB, etc.
- Multiplayer 2.1 by Madteam supports ST + Amiga mouse in port A
- Unriagh I (german PD adventure) has drivers for ST mouse+Joystick
(stick=port 1, mouse=port2)
- Unriagh II (german PD adventure) has drivers for ST mouse+joystick
(stick=port 1, mouse=port 2)

- little Calculator (AMC-Verlag, PD) uses ST-mouse only (port 2)
- big UPN calculator (PD) uses ST mouse, TB, Touch tab. and
joystick; (there are different COM
files, rename the one you wish to
use to *.EXE; all drivers use port
1 - if I remember correctly)
- Operation Blood (ANG/Mirage) press mouse fire or Select to start
in ST mouse mode (port 2)
- Operation Blood 2 / Special Forces press mouse fire or Select to start
(ANG/Mirage) in ST mouse mode
- Sprint XL (ABBUC Jahresgabe 1992) uses an ST mouse in port 2
- M.O.S. (ABBUC magazine) uses an ST mouse in port 2
- Diamond GOS (Reeve software) all three versions support an ST
mouse in port 2
- S.A.M. (Power per Post) german GUI, supports an ST mouse in
port 2
- G.O.E. (TCS) supports an ST mouse in port 1
- BOSS-X (MS-Software, Mirko Sobe) supports ST-Mouse in Port 2

RE: Missile Command, Andreas writes:
there are many different versions available... I know the old Atari 800
cart version, which works correct with Joystick and Trakball, but not at
all with a mouse. The newer XL version works with Mouse, trackball and
Joystick, also the newest (built-in) XEGS version of MC. But, there is
also a tape version (and maybe a disk version) of MC available. I am not
sure if this tape version behaves like the old 800 version or like the
newer XL and XE/XEGS versions...

And about mice, Andreas adds:
Maybe you did not know, there is a little difference between Trackball
and ST-mouse. Although MC works with both input devices does not mean,
they are the same. they are not !! Connect the TB to an ST computer and
you see: it does not work at all !! You have to do a small conversion to
convert the TB to an ST mouse. (Plans are avaiable from ABBUC, Germany).

Subject: 8.7) What programs have a paddle(s) or Koala Pad mode?

Andreas Magenheimer contributes:

- Super Breakout (Atari) breakout clone
- Live Wire (Analog) tempest clone
- Live wire 2 (Analog) tempest clone
- Planetary Defense (Analog)
- Pong (Antic) Pong clone
- Pong (Analog) Pong clone
- Super Ball (Compy Shop Magazin) Breakout clone
- Arkanoid (Taito/Imagic) Breakout clone
- Koala/Micro-Illustrator (Island graphics/Koala Ware) graphics program
- Chiseler (Antic or Analog) a breakout clone
- Slime (Synapse) a slimy shooter...

- Chicken (Synapse) catch the chicken eggs...
- One on One (Compute!) a breakout/warlords clone
- Paratroop Attack by David Plotkin
- all Pinballs created with the P.C.S.
(use left paddle trigger for left flipper and right paddle trigger for
right flipper; or simply use a joystick and left/right/fire button);
- many more Pong and Breakout clones
(forgot their names, maybe someone can help here!)
- many more programs (which I do not remember right now!)

for Koala Pad only: - Micro-Illustrator / Koala Painter
- other Koala Pad painters or programs

Subject: 8.8) What programs have a CX85 Numerical Keypad mode?

Andreas Magenheimer contributes:

- Bombdown (Roemer of Uno);
- The Bookkeeper (Atari);
- Multi mouse Management (PD);
- UPN calculator (PD);
- Ball Harbour (Zong 8/1992);
- The Big Quest (Zong 7/1992);
- Blob (Zong 2/1992);
- Bomber Jack (KE-Soft);
- Catch (Zong 6/1992);
- Code table (Zong 11+12/1993);
- CX-85-Driver (Zong 7+8/1994);
- CX-85-Keycode-driver (Zong 7+8/1995);
- Donald (by KE-Soft);
- Drag (by KE-Soft);
- Dragon Fire (Zong 1/1993);
- Gravitar (Zong 4/1992);
- Hungry Goblin (Zong 5/1992);
- Invaders (Zong 5+6/1993);
- Joshi (Zong 3+4/1993);
- Lasermaze (by KE-Soft);
- Lost in the Antarctic (Zong 2/1992);
- Mampfman (Zong 8/1992);
- Minipac (Zong 3/1992);
- Minipac 2 (Zong 6/1992);
- Money Raider (Zong 2/1992);
- Monster Tracking (Zong 9/1992);
- Oblitroid (by KE-Soft)
- Pac-Man (Zong 11/1992);
- Schlumpf/Smurf (Zong 5/1992);
- Slurp (Zong 3/1992);
- Techno Ninja (by KE-Soft)
- Transsylvania (Zong 3+4/1993);
- Viro-Mania (Zong 2/1993);

- Zador XL (by KE-Soft)
- Zador II (by KE-Soft)
- many more games from KE-Soft and Powersoft;
(forgot their names, help needed!)

Subject 8.9) What programs have a Touch tablet mode?

Andreas Magenheimer writes:

- Atari Artist (Atari) graphics program
- Pixel Artist Deluxe 1.3 (PD) graphics program
- The Brundles (KE-Soft) Lemmings clone
- Musorqua (Analog computing) educational program
- many more (which I do not remember right now!)

Subject: 8.10) What kinds of RAMdisks can be set up on the Atari?

This section by Andreas Magenheimer.

8.10 Atari Ramdisks - An (incomplete) Overview:
[This is version 2.10 from October 2003]

Right from the start of the Atari 8-bit computer era in the late 70`s, Atari users wanted to have as much RAM as possible (or as their purse could afford). Having a 16k machine with a tape device was nice and cheap, but having full 48k or 64k and a floppy drive was much nicer (and very expensive). Thus many Atari users began to create selfmade RAM extensions and enhancements, just to save some money. Also a lot of firms provided extra RAM, RAM enhancements, RAM extensions and Ramdisks. Besides Atari there were (and still are) quite a lot of producers, manufacturers, distributors and authors of such RAM enhancements...

This "short" and incomplete overview does not provide any docs or manuals, but gives some info about the various Ramdisks on the market. Since these notes are written by me, they will merely contain the information I have. And as you all can see - it is still incomplete. So any help and extra info, as well as corrections, are very welcome. It would be nice to see this text & info growing. For now let us start here, the info-section is divided into 8 groups:

1) Name (Name of the RD, e.g. Megaram 2 or Rambo XL or MIO, etc.);
2) Vendor/Author (or distributor, manufacturer, producer, etc.);
3) Size (size of the Ramdisk only; NOT the full computer memory);
4) [Bankswitching] Area (for XL/XE computers usually 4000-7FFF);
5) Banks (hexadecimal input count, as in MyDOS or RAMDTEST.BIN);
6) Control Bits (which bits are used to control the Rambanks);
7) Port (control Port - usually Port B for XL/XE machines);
8) Notes (any extra info, comments, miscelleanous things, etc.);

If you wish to add any other type of info, let me know. The above information should be enough for most programmers to support a RD in their programs (especially to support more than just one type of RD). Hopefully future programs will take care about this info or just use a small setup program to setup any kind of RD. Now let me begin:

A) Atari 400/800 Ramdisks:

Name Vendor Size Area
Banks Bits Port Notes

- Axlon Axlon/Atari 64k 4000-7FFF
0 thru 3 0,1 (CFFF) plug-in-board
Note: total memory = 96kbytes (32k RAM + 64k RD);

- Axlon Axlon/Atari 128k 4000-7FFF
0 thru 7 0,1,2 (CFFF) plug-in-board
Note: total memory = 160kbytes (32k RAM + 128k RD);

- 288k800 D.Byrd and others 256k 4000-7FFF
0 thru 15 0,1,2,3 (CFFF) selfmade-board
Note: total memory = 288kbytes, Axlon compatible;

- 544k800 various authors 512k 4000-7FFF
0 thru 31 0,1,2,3,4 (CFFF) selfmade-board
Note: total memory = 544kbytes, Axlon compatible;

- 1056k800 various authors 1024k 4000-7FFF
0 thru 63 0,1,2,3,4,5 (CFFF) selfmade-board
Note: total memory = 1056kbytes, Axlon compatible;

- 2080k800 various authors 2048k 4000-7FFF
0 thru 127 0,1,2,3,4,5,6 (CFFF) selfmade-board
Note: total memory = 2080kbytes, Axlon compatible;

- 4128k800 various authors 4096k 4000-7FFF
0 thru 255 0,1,2,3,4,5,6,7 (CFFF) selfmade-board
Note: total memory = 4128kbytes, Axlon compatible;

=> Note that all so-called Axlon "compatible" (256k-4096k) Ramdisks normally do not homebank when RESET is pressed (a fix should be available somewhere), whereas original Axlon Ramdisks do homebank properly !! (Special thanks to Lee Barnes for this note !!)

- Mosaic RAMpower by Mosaic Electronics is actually a Ramboard, that enhances the memory of your Atari 800; avaiable in 3 sizes: 16k, 32k and 64k (where max. 52k can be utilized from 64k). Looks like these are no Ramdisks, just (normal/main) RAM enhancements. But maybe the 64k Ramboard can be patched in some way to gain a small 16k or 32k Ramdisk (48k RAM + 16k RD or 32k RAM + 32k RD) ?!?

- ...

B) Atari XL/XE Ramdisks:

Name Vendor Size
Area Bits Port
Banks
Notes

=> Note that bit 4 is always used in all Port B type memory upgrades to
turn on the CPU's access to the extended memory. Thus, it is not reported
in bit use tables as a used bit as it does not control which bank gets
switched into the 4000-7FFF region. This seems to be a standard convention
as the majority of ramdisk users don't want bit 4 counted as a control bit.
And it's not a control bit - its the 'on' bit. Likewise, bit 5 is the 'on'
bit for ANTIC's access to the extended memory for 'compatible' (to 130XE)
machines as well. If bit 5 does show up in a bit use table, one can only
assume that this is an incompatible machine which doesn't have or use ANTIC
access at all. In that special case, bit 5 is then available for use in
switching in the various banks and thus gets counted as a control bit in
bit use tables. (Special thanks to Lee Barnes for this note !!)

- 130XE-Ramdisk Atari 64k
4000-7FFF 2,3 B ($D301)
Banks: E3,E7,EB,EF;
Notes: old=8kbyte chips (west), new=32kbyte chips (east);
XE`s made in China have faulty GTIAs => replace them!;
XE`s and XEGS made in China also have a new OS which causes
some incompatibility problems (try: Encounter / disk version
by Novagen or try: Muad`Dib-Demo by Hurek, etc.); just replace
the new OS with an older XL/XE one if you want less trouble!;
standard Atari RD - available with all XE-compatible ramdisks;
Antic access: YES! Atari Basic: YES! XL/XE Selftest: YES!;

- 192k-600XL Compyshop 128k
4000-7FFF 2,3,? B ($D301)
Banks: e3,e7,eb,ef,a3,a7,ab,af;
Notes: early CS upgrade version for 600XL only!;
afaik this was a piggy-back version...;
Antic access: no! Atari Basic: YES! XL/XE Selftest: YES!;

- 320k-800XL Compyshop 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2b,2f,63,67,6b,6f,a3,a7,ab,af,e3,e7,eb,ef;
Notes: afaik this was a piggy-back version...;
Antic access: no! Atari Basic: YES! XL/XE Selftest: YES!;

- 320k-130XE Compyshop 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2b,2f,63,67,6b,6f,a3,a7,ab,af,e3,e7,eb,ef;
Notes: afaik this was a piggy-back version with sep. Antic!;
(XE meant 130XE only! this excluded 65XE and 800XE!);
Antic access: YES! Atari Basic: YES! XL/XE Selftest: YES!;

- 512k XL various authors 448k
4000-7FFF 2,3,4,5,6,7 B ($D301)
Banks: ef,eb,e7,e3,cf,cb,c7,c3,af,ab,a7,a3,8f,8b,87,83
6f,6b,67,63,4f,4b,47,43,2f,2b,27,23;
Notes: This 512k upgrade is not the same as the one thats on the
British Underground. That one dont work, I had to fix it years ago.
The new version will replace the 64k main RAM with 512k RAM, thus
you gain 64k RAM and 448k Ramdisk. (A.M.: Afaik, it has the same
problems as the 256k RAM enhancements [with 64k RAM and 192k Ramdisk],
meaning *some* programs will try to use the main RAM as rambanks...)
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!;

- A.M. Ramdisk Atari Magazin 256k
4000-7FFF 2,3,5,6 B ($D301)
Banks: 83,87,8B,8F,A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: manual and schematics, as well as a parts list can be found
in german Atari Magazin 2/1987 (includes a Basic test program!);
bugfixes and updates in Atari Magazin 3/1987, 4/1988 and 5/1988;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!;

- Bob Woolley`s Atari 1200XL 1MB upgrade 960k
4000-7FFF 1,2,3,5,6,7 B ($D301)
Banks: EF, ED, EB, E9, E7, E5, E3, E1
CF, CD, CB, C9, C7, C5, C3, C1
AF, AD, AB, A9, A7, A5, A3, A1
8F, 8D, 8B, 89, 87, 85, 83, 81
4F, 4D, 4B, 49, 47, 45, 43, 41
2F, 2D, 2B, 29, 27, 25, 23, 21
0F, 0D, 0B, 09, 07, 05, 03, 01
Notes: this upgrade uses 64k as main RAM and 960k as Ramdisk;
Selftest: Yes!, Basic: "no" (not built-in), Antic access: no! ;

- Mathy`s RD M.v.Nisselroy 1024k
4000-7FFF 0,1,2,3,6,7 B ($D301)
Banks: EF EE ED EC EB EA E9 E8 E7 E6 E5 E4 E3 E2 E1 E0
AF AE AD AC AB AA A9 A8 A7 A6 A5 A4 A3 A2 A1 A0
6F 6E 6D 6C 6B 6A 69 68 67 66 65 64 63 62 61 60
2F 2E 2D 2C 2B 2A 29 28 27 26 25 24 23 22 21 20
Notes: uses a PC-SIMM (30-Pin-SIMM), pin-switching in RD: 4,5;
XL/XE/XEGS: Selftest+Basic=YES, XEGS: Missile Command=YES!;
no use of any switches!; Antic access: YES!; (CS-compatible!);

- Megaram 1 Klaus Peters 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
Notes: used 16kbyte Chips x16 (very big/huge pcb);
originally designed (and maybe produced?) by Ralf David;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 2 Klaus Peters 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
Notes: uses 128kbyte Chips x2 (much smaller pcb);

originally designed (and maybe produced?) by Ralf David;
newer MegaRAM version; fully compatible to Megaram 1;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 1,2 => 512k B.Pahl 512k
4000-7FFF 2,3,5,6,7 B ($D301)
Banks: 03,07,0B,0F,23,27,2B,2F,43,47,4B,4F,63,67,6B,6F,
83,87,8B,8F,A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: upgrade for Megaram 1 or 2 to 512kbytes (which means
a total of 576kbytes memory); requires a small pcb (in
connection with the existing Megaram 1 or 2 pcb) and the
following chips: 2x 414256 (RAM), 1x 74LS138 plus some more
wires inside the computer; additionally one may install a
switch to switch down to 320k or even 64k (no RD!) if needed;
advantage: more RAM, Basic still there, 26AE & 8ACE banks...;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 3 Klaus Peters 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
Notes: uses 256kx4 Chips (514256-70); fully compatible to
K.P./R.D. Megaram 1+2; originally designed by Ralf David;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 3 Klaus Peters 1024k
4000-7FFF 2,3,6,7 B ($D301)
0,1 (or switches) B ($D600)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
$D600: F3,F7,FB,FF...
Notes: uses 1Mx4 Chips (514400-70); can be a) 1 Ramdisk of 1 Mb
or b) 2 Ramdisks of 512kb each or c) 4 Ramdisks of 256kb each;
uses four switches; the 1MB mode seems to be very incompatible!!;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

=> Note that all XL-type Megaram-Ramdisks (Megaram 1, 2, 3)
have Refresh bugs/problems which can be solved quite easily
with one 74LS08 chip (see ABBUC magazine 63, pages 19+20);
None of the Megaram Ramdisks do have the separate Antic access
built-in, but XE-types can be upgraded easily for this mode!!;

- Newell Newell Ind. 192k
4000-7FFF 2,3,5,6 B ($D301)
Banks: a) older version: 83,87,8B,8F,C3,C7,CB,CF,E3,E7,EB,EF;
b) newer version: A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: replaces the 8 RAM 4164 with 8 RAM 41256 and thus uses
64k as main RAM and 192k as Ramdisk/extra RAM (therefore some
RD-testers will see 240k memory or 15 RD-banks which is untrue!);
the older 256k Newell version was not compatible to Rambo XL,
Buchholz and Peterson, since these were not available then;
Newell was earlier on the market than Rambo and Peterson,
while early Buchholz Ramdisks used 32k banks instead of 16k
banks; all this changed with the appearance of the 130XE

and thus Buchholz designed 16k Rambanks and finally Newell
256k Ramdisks became Buchholz/RamboXL/Peterson compatible !!
Atari Basic: YES! XL/XE Selftest: YES! Antic access: YES!

- Newell Newell Ind. 1024k
4000-7FFF 1,2,3,5,6,7 B ($D301)
Banks: 01,03,05,07,09,0B,0D,0F,21,23,25,27,29,2B,2D,2F
41,43,45,47,49,4B,4D,4F,61,63,65,67,69,6B,6D,6F
81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF
Notes: uses 8 pc. 1Mx1 Chips (511000-80); Basic: To be able to
select the internal Basic, connect a toggle switch between ground
and the motherboard where PB1 was removed (PIA `Hole' 11). The
switch is not much different than the Option Key, and I found it
more versatile. (Wes Newell) => see also ABBUC mag. 29, page 6+7;
Atari Basic: yes/no! XL/XE Selftest: YES! Antic access: YES!

=> Note that so-called "Newell-compatible" Ramdisks (clones or
selfmade ones...) most likely do NOT have Antic access, due to
the lazyness of its creators or their intentions of simply not
needing it. However, original Newell Ramdisks created and sold
by Wes Newell do have the separate Antic access !!

- Newell Newell Ind. 4096k
4000-7FFF 0,1,2,3,4,5,6,7 B ($D301)
Banks: 00,01,02,03,04,05,06,07,08,09,0A,0B,0C,0D,0E,0F
10,11,12,13,14,15,16,17,18,19,1A,1B,1C,1D,1E,1F
20,21,22,23,24,25,26,27,28,29,2A,2B,2C,2D,2E,2F
30,31,32,33,34,35,36,37,38,39,3A,3B,3C,3D,3E,3F
40,41,42,43,44,45,46,47,48,49,4A,4B,4C,4D,4E,4F
50,51,52,53,54,55,56,57,58,59,5A,5B,5C,5D,5E,5F
60,61,62,63,64,65,66,67,68,69,6A,6B,6C,6D,6E,6F
70,71,72,73,74,75,76,77,78,79,7A,7B,7C,7D,7E,7F
80,81,82,83,84,85,86,87,88,89,8A,8B,8C,8D,8E,8F
90,91,92,93,94,95,96,97,98,99,9A,9B,9C,9D,9E,9F
A0,A1,A2,A3,A4,A5,A6,A7,A8,A9,AA,AB,AC,AD,AE,AF
B0,B1,B2,B3,B4,B5,B6,B7,B8,B9,BA,BB,BC,BD,BE,BF
C0,C1,C2,C3,C4,C5,C6,C7,C8,C9,CA,CB,CC,CD,CE,CF
D0,D1,D2,D3,D4,D5,D6,D7,D8,D9,DA,DB,DC,DD,DE,DF
E0,E1,E2,E3,E4,E5,E6,E7,E8,E9,EA,EB,EC,ED,EE,EF
F0,F1,F2,F3,F4,F5,F6,F7,F8,F9,FA,FB,FC,FD,FE,FF
Notes: uses 8 pc. 4Mx1 Chips (541000-80); made by Newell, later by
FTE; seems to be very incompatible to existing software and
bankswitching cartridges (OSS, Atari, etc.), because normal RAM at
4000-7FFF is NOT available - only extra Ram/Ramdisk banks. With one
PIA chip there is simply no bit left to switch between main RAM and
extra RAM / Ramdisk. But with the installation of a second PIA chip
one would be able to do so. Furthermore one may use (almost) any
setup or banks he likes then (with a second PIA chip one could
control up to 256 Megabytes of RAM). Basic: To be able to select the
internal Basic, connect a toggle switch between ground and the

motherboard where PB1 was removed (PIA `Hole' 11). The switch is not
much different than the Option Key, and I found it more versatile.
(Wes Newell); OS: It is possible to maintain OS bankink using 4 Megs.
It requires moving the OS into RAM before any banking of that Bit
occurs. Use MOVEOS File on the [Newell-Software-] Disk. (Wes Newell)
Atari Basic: no! XL/XE Selftest: no (?) Antic access: no!

- Peterson 256k S.Peterson 192k
4000-7FFF 2,3,5,6 B ($D301)
Banks: A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: compatible to Buchholz, Rambo XL and newer Newell versions;
replaces the 8 RAM 4164 with 8 RAM 41256 and thus uses 64k as main RAM
and 192k as Ramdisk (most RD-testers will therefore see 240k memory);
Antic access: no!, Atari Basic: YES!, XL/XE Selftest: YES!

- Peterson 320k S.Peterson 256k
4000-7FFF 2,3,5,6 B ($D301)
Banks: 83,87,8B,8F,A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: compatible to TOMS (?), incompatible to Compyshop!;
there are still the 64k main RAM plus this 256k extra RAM;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Peterson 576k S.Peterson 512k
4000-7FFF 1,2,3,5,6 B ($D301)
Banks: 81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF,
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF;
Notes: should be fully compatible to TOMS-Ramdisk (?);
Atari Basic: no! XL/XE Selftest: YES! Antic access: no!

- Peterson 1088k S.Peterson 1024k
4000-7FFF 1,2,3,5,6,7 B ($D301)
Banks: 01,03,05,07,09,0B,0D,0F,21,23,25,27,29,2B,2D,2F
41,43,45,47,49,4B,4D,4F,61,63,65,67,69,6B,6D,6F
81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF
Notes: fully compatible to Newell and TOMS (?) Ramdisks;
Atari Basic: no! XL/XE Selftest: YES! Antic access: no!

=> Note that (separate) Antic access can be done to all Peterson
and compatible XE-type Ramdisks; just refer to Ed Bachman`s fine
article (supplied with the manual for the Wedge) on how to
update/upgrade your Peterson or compatible Ramdisk for Antic access;
(Afaik only XE-type computers can be upgraded for separate Antic
access, since XL-type computers don`t have the Freddie and Gate
Array chips; the Freddie chip controls the Gate-Array chip; the
Gate-Array chip is responsible for the separate Antic mode...)

- Quarter-Mega-XL C.Buchholz 192k
4000-7FFF 2,3,5,6 B ($D301)
Banks: A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF (=newer version);
Notes: compatible to Peterson, Rambo XL and newer Newell versions;
replaces the 8 RAM 4164 with 8 RAM 41256 and thus uses 64k as main RAM

and 192k as Ramdisk (therefore most RD-testers will see 240k memory);
older versions were designed for 32k banks, but with the appearance of
the 130XE as the new standard, the design had been changed to 16k banks;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Rambo XL ICD 192k
4000-7FFF 2,3,5,6 B ($D301)
Banks: A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: compatible to Buchholz, Peterson and newer Newell versions;
replaces the 8 RAM 4164 with 8 RAM 41256 and uses 64k as main RAM and
192k as Ramdisk (therefore most RD-testprograms will see 240k memory);
built in Atari Basic: YES!, XL/XE Selftest: YES! Antic access: no!

- Rambo=>512k Dan Schmid 512k
4000-7FFF 2,3,5,6,7 B ($D301)
Banks: 00,04,08,0C,20,24,28,2C,40,44,48,4C,60,64,68,6C, (Basic
80,84,88,8C,A0,A4,A8,AC,C0,C4,C8,CC,E0,E4,E8,EC; on??)
Notes: this "project" should upgrade a Rambo XL to 576kbytes;
the docs were found on Pooldisk Too (SUBDIR: ACE/Acec202 a+b);
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no (?)

- Satantronic`s 1MB PC-SIMM Ramdisk 1024k
4000-7FFF 1,2,3,5,6,7 B ($D301)
Banks: 01,03,05,07,09,0B,0D,0F,21,23,25,27,29,2B,2D,2F
41,43,45,47,49,4B,4D,4F,61,63,65,67,69,6B,6D,6F
81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF
Notes: Extended RAM is not available from BASIC. But with a small
patch it is possible to access 512 KB from Basic. This is compatible
with 256 KB and 1024 KB SIMM modules. There also exists some light
modified version of this RD with some switches for better
compatibility with some "old" software. (XI of Satantronic);
Atari Basic: no! XL/XE Selftest: YES! Antic access: no!

- TOMS-RD T.O. + M.S. 256k
4000-7FFF 2,3,5,6 B ($D301)
Banks: 83,87,8B,8F,A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: made+standard in Poland; supported in most polish demos;
should be fully compatible to A.M. and Scott Peterson Ramdisks (?);
Atari Basic: YES!, XL/XE Selftest: YES!, Antic access: no (?);

- TOMS-RD T.O. + M.S. 512k
4000-7FFF 1,2,3,5,6 B ($D301)
Banks: 81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF,
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF;
Notes: should be fully compatible to S.Peterson Ramdisk (?)
Atari Basic: no! XL/XE Selftest: YES! Antic access: no! (?)

- TOMS-RD T.O. + M.S. 1024k
4000-7FFF 1,2,3,5,6,7 B ($D301)
Banks: 01,03,05,07,09,0B,0D,0F,21,23,25,27,29,2B,2D,2F
41,43,45,47,49,4B,4D,4F,61,63,65,67,69,6B,6D,6F

81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF
Notes: should be compatible to Newell & S.Peterson (?)
Atari Basic: no! XL/XE Selftest: YES! Antic access: no (?)

C) Parallel-Bus-Devices:
(600XL/800XL = parallel bus, XE = cart-port + ECI and/or adapter)

- Turbo Freezer XL Bernhard Engl 256k
4000-7FFF 2,3,4,5,6 B ($D301)
Banks: E3,E7,EB,EF,93,97,9B,9F,A3,A7,AB,AF,B3,B7,BB,BF;
Notes: The Turbo Freezer XL is an external device for the XL-PBI
with its own Operating-Sytem. It has a built-in Freezer, Monitor
and DOS. The Antic access for the RD can simply be built with one
wire from CPU to PBI. The RD Access works with Port-Bits 2,3 for
Bank Switching, Bits 4,5 for Groups and Bit 6 for "Mode-Select".
PortB D7 = Selftest (0=on)
D6 = Mode (1 = XE, 0 = Groups)
D5 = XE: ANTIC-Access (0 = on), Groups: Group H
D4 = XE: CPU-Access (0 = on), Groups: Group L
D3 = Bank Number H
D2 = Bank Number L
D1 = BASIC ROM (0 = on)
D0 = OS ROM (0 = off)
Atari Basic: YES! XL/XE Selftest: YES! Antic access: optional;

- missing info for the following Ramdisks:
other Bob Woolley Ramdisks, more 600XL Ramdisks, Rambo XL (512k by
ICD), some Irata Ramdisks, MIO, as well as many other types;
- (?) means: info is missing or I am not absolutely sure about this
information; so this has to be verified by other Atarians;

For this 20th edition special thanks and credits go to: Lee Barnes,
Russ Gilbert, Mathy van Nisselroy, Erhard Puetz, Mathias Reichl,
Ron Hamilton, Wes Newell, Guy Ferrante, XI of Satantronic, Bernhard
Pahl and Walter Lojek for sharing their info with me. Also thanks to
John Picken for writing an excellent article about ramdisks and
cartridges (especially about bank-switching, which both devices can
do). And thanks to Jindrich Kubec (Jindroush) for presenting this fine
article on his homepage... Finally thanks to Michael Current for
publishing/including this "spam" in his A8FAQ and all the nice Atarians
at comp.sys.atari.8bit for their help and patience. -Thank you Folks !!-
Well, thats it for today - there is still a lot of information missing,
I know, but any help is appreciated. If you have some more information
or other things that might help, let me know. Please do also send
corrections since there will always be some updates and corrections
nescessary. Atarian Greetings - Andreas Magenheimer.

Subject: 8.11) What programs support a RAMdisk?

This section by Andreas Magenheimer.

8.11 Ramdisk-supporting Software:
(This is Version 2.10 from October 2003)

Well, I will only list those programs here that have BUILT-IN! ramdisk
support. Why? Simply, because most if not all PD programs can support
a RD, as soon as the user a) has a certain DOS or RD driver or b) has
a special OS inside the computer or c) has any kind of special and
non-standard hardware. Just one example: With the use of QMEG+ OS it
is possible to freeze ZORK (or any other protected / unprotected program)
into the RD, then re-direct the RD as being drive 1 and finally boot
Zork off of the Ramdisk, allthough Zork does not support a RD in any way.
The same funny things can be done to other copy protected programs and
especially to unprotected public domain programs... Now, let me begin:

A) DOS programs:

a) Name(s) b) Author(s)
c) RD-type(s) d) max. size

- Atari DOS 2.0 (Atari Corp.) OSS/Atari;
a) Axlon-RDs (selfmade drivers!) 128k;
b) XE-RDs (selfmade drivers!) 130XE (=64k);
(there are some more selfmade RD-drivers available!)

- Atari DOS 2.5 (Atari Corp.) OSS/Atari;
a) 130XE-RD (standard driver!) 64 kbytes;
b) XE-RDs (selfmade drivers!) max. 2x128 kbytes;
c) Axlon-RDs (selfmade drivers!) 128 kbytes;
(there are very many selfmade RD-drivers available!)

- DOS 3.0 (Atari Corp.) ???/Atari;
=> there should be some selfmade drivers for 130XE Ramdisks (and
maybe Axlon), but I have not yet seen any (nor used DOS 3);

- DOS 4.0 (Atari/Antic) Michael Barall;
=> there should be some selfmade drivers for 130XE Ramdisks (and
maybe Axlon), but I have not yet seen them (nor used DOS 4);

- Bewe-DOS Bewesoft/J.Bernasek;
a) XE-RDs (standard driver!) up to 1024 kbytes;
b) Rambox (standard driver!) up to 256 kbytes;
(Bewe-DOS is compatible to Sparta-DOS but does not use the RAM
under the OS ROM! many tools can be used under both DOS versions);

- Bibo DOS Compyshop/E.Reuss;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) other RDs (selfmade drivers!) up to 256 kbytes;

- DOS II+D Version 6.x Stefan Dorndorf;
a) XE-RDs (standard driver!) max. 2x128 kbytes;
b) Rambox (selfmade drivers!) up to 256 kbytes;

- DOS-XE (Atari Corp.) ???/Atari;
a) 130XE-RD (standard driver!) 64 kbytes;
b) other RDs (really?!?) unknown;
=> has the same author as the unpopular (Atari) DOS 3.0 !!;
(in the Atari scene it is as unpopular as DOS 3 and DOS 4!);

- DOS-XF (Atari Germany) Reitershan Comp.
=> similar in function to Turbo-DOS 2.1XF (but with a nice
DOS 2.0 / 2.5 DUP-menu!) => see Turbo-DOS !!

- My-DOS 4.5x Wordmark/R.Puff+C.Marslett
a) XE-RDs (standard driver!) up to 1024 kbytes;
b) Axlon-RDs (standard driver!) up to ??? kbytes;
c) other RDs (MIO, BB, etc.) up to 1024 kbytes?;

- Smart-DOS Version 6.1 Ron Bieber;
a) XE-RDs (selfmade drivers!) up to 64 kbytes;
b) Axlon-RDs (selfmade-driver!) up to 128 kbytes;

- Sparta-DOS 1.x (400/800) ICD;
a) Axlon-RDs (??? drivers) up to 128 kbytes;
b) other RDs (??? drivers) up to ??? kbytes;

- Sparta DOS 2.x, 3.x (XL/XE) ICD / FTE;
a) XE-RDs (standard drivers!) up to 1024 kbytes?;
b) others (MIO, BB, etc.) up to 1024 kbytes?;
(maybe also RD-drivers for up to 16 Megabytes ?!?)

- Sparta DOS 3.3x (XL/XE) Stephen J. Carden;
=> see Sparta DOS 2.x and 3.x !!
(especially made for use with BBS-Express-Pro!)

- Sparta DOS X / 4.x (XL/XE cart.) John Harris/FTE;
=> see Sparta DOS 2.x and 3.x !!
(maybe with RD-driver for up to 16 Megabytes ?!?)

- Super DOS 2.x Paul Nichols;
a) XE-RDs (standard driver!) up to 128 kbytes;
b) Axlon-RDs (standard driver!) up to 128 kbytes;

- Super DOS 5.x Paul Nichols;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) Axlon-RDs (standard driver!) up to 128 kbytes;

- Top-DOS 1.x R.K. Bennett
a) Axlon-RDs (standard driver!) up to 128 kbytes;
b) 130XE-RD (standard driver!) 64 kbytes;
c) other RDs (Mosaic?! driver!) up to ??? kbytes;

- Turbo-DOS 1.x, 2.x Reitershan Comp.;
a) XE-RDs (standard driver!) up to 256 kbytes;

b) other RDs (MIO, Irata, etc.) up to 256 kbytes;

- X-DOS 2.x Stefan Dorndorf;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) other RDs (selfmade drivers!) up to 256 kbytes;

B) Non-DOS programs:

a) Name(s) b) Author(s)
c) supported memory d) RD-type(s)

- A-Base 130XE (TOOL) ??? (author unknown);
64k, 128k 130XE-Ramdisk;

- ABBUC-Magazine-Intro 52 (DEMO) Karolij N./Heaven
64k, 128k 130XE-Ramdisk
(has different intros on 64k / 128k machines!)

- ABBUC-Magazine-Intro 55 (DEMO) Karolij N./Heaven
64k, 128k 130XE-Ramdisk
(with different intros on 64k / 128k machines!)

- Adalmar (GAME) F.Buettner (PPP);
64k, 128k 130XE-Ramdisk;

- Alphasys-Sample-Software (TOOLs) (Mirage+ANG);
a) 64k, 128k 130XE-Ramdisk;
b) 320k 26AE = YES!, 8ACE = ???;
(there are several programs for 64k or 128k memory; there
is also one -and only one- program for 320k Ataris)

- Anime 4ever (DEMO) Sente-Software-Group;
64k, 320k 26AE ???, 8ACE ??? ;
(on 64k Ataris all pics load from disk, on 320k Ataris from Ramdisk)

- A.R.-The Dungeon (GAME) P.Price/Datasoft;
48k, 64k, 128k 130XE-RD;

- A-Text (TOOL) ??? (author unknown);
64k, 128k 130XE-RD;

- Atari-Writer-80 (TOOL) (Atari);
48k, 64k, 128k 130XE-RD;

- Atari-Writer-Plus (TOOL) (Atari);
48k?, 64k?, 128k 130XE-RD;

- Basic-XE (TOOL) OSS/ICD/FTE
64k, 128k 130XE-RD;

- Bop N'Wrestle (GAME) (Mindscape)
64k, 128k 130XE-RD
(on 64k Ataris the floppy will never stand still!)

- [The] Brundles (GAME) A.R.+C.S.S. (KE-Soft);
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;
(merely copies the levels into the RD and loads them from there;
if you don't want to play all 100 levels at once, 64k is enough!)

- Datei 4.x (database TOOL) Norbert Schlia;
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;

- Desktop Atari (TOOL) H.B.S.F
64k, 128k RAM 130XE-RD;
(the Key "7" in the Main Menu copies the whole program into the RD)

- Diskcomm. 2.x, 3.x (TOOL) Robert "Bob" Puff;
a) extra RAM (answer with Yes) detects up to 10 banks (hex.)?;
b) Ramdisk (answer with No) all DOS 2, My-DOS and Sparta RDs;
(Ramdisk size depends on the DOS and RD driver you are using, i.e.
with TurboDOS up to 256k, with MyDOS or Sparta maybe up to 1 Megabyte)

- Diskworker 130XE (Tools) PETSOFT
64k, 128k RAM 130XE-RD;

- Extended-Atari-Basic (TOOL) ??? (author unknown);
64k, 128k (RAM under OS-ROM!) 130XE-RD;

- Extended-Turbo-Basic (TOOL) ??? (author unknown);
64k, 128k (RAM under OS-ROM!) 130XE-RD;

- Fampy 2.3 (Bootdisk; TOOL) Friday-Soft/W.Freitag;
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;

- Fampy 6.1i+ (ML-File; TOOL) Friday-Soft/W.Freitag;
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;

- Grafik+Sound Demo (DEMO) Dendrit-Soft/P.Sabath;
(48k?) 64k, 128k 130XE-Ramdisk;

- Howfen-DOS 3.x, 4.x (TOOL) ??? (author unknown);
48k, 64k, 128k and more 130XE-RD and more;

- Howfen-Tape-to-Disk (TOOL) ??? (author unknown);
48k, 64k, 128k and more 130XE-RD and more;

- Human Torch & The Thing Questprobe (SAGA+Marvel);
48k/64k, 128k RAM 130XE-Ramdisk
(The main program or some pics will be copied to the Ramdisk)

- Inertia 2.9 (TOOL) Mad Team;
a) 64k RAM (16k only) 16k usable memory (1 bank);
b) 128k RAM (16k+64k) 130XE-Ramdisk; (5 banks);
c) 320k RAM (16k+256k) 26AE & 8ACE RDs (17 banks);

- I.K. Plus Demo (GameDEMO) ??? (authors unknown)
a) 64k RAM only graphics;
b) 128k RAM graphics + sound;

- Megablast 1 (GAME) Thorsten Karwoth;
64k, 128k 130XE-Ramdisk;

- Midi-Mate II (Tool) Hybrid Arts;
64k, 128k 130XE-Ramdisk;

- Midi-Pattern-Editor (TOOL) Raster/Radek Sterba;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE-RDs?;

- Midi-Player (TOOL) Ireneusz Kuczek;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE RDs?;

- Midi-Recorder (TOOL) Ireneusz Kuczek;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE RDs?;

- Midi-Sequencer (TOOL) Maciej Sygit;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE RDs?;

- MSC-IDE interface software (TOOLs) M.Belitz+S.Birrmanns;
64k, 128k 130XE-Ramdisk
(some programs/drivers use the Ramdisk, if no Ramdisk is
available, they will use & erase the RAM area 4000-7FFF)

- [The] Muppet-Movie (DEMO) Mad Team;
64k, 128k 130XE-Ramdisk;
(on 128k Ataris some pics are loaded from the Ramdisk)

- [The] Page Designer (TOOL) XLent
64k, 128k 130XE-Ramdisk;

- Paperclip II (TOOL) Batteries Included;
48k?, 64k, 128k 130XE-Ramdisk;

- Questprobe featuring Spiderman - see: Spiderman;
(afaik, THE HULK does not support 128k RAM);
- Questprobe featuring Human Torch and Thing - see Human Torch;

- Spiderman Questprobe (SAGA+Marvel);
48k/64k, 128k RAM 130XE-Ramdisk;
(The main program or some pics will be copied to the Ramdisk)

- Sweet Fantasy (DEMO) Tight;
64k, 128k 130XE-Ramdisk;
(on 128k machines the gr.9 pics are loaded from the ramdisk,
on 64k Ataris the gr.9 pics are loading from the disk drive);

- Syncalc "+" (TOOL) Synapse;
48k, 64k, 128k RAM and more Axlon-Ramdisks;

- Synfile "+" (TOOL) Synapse;
48k, 64k, 128k RAM and more Axlon-Ramdisks;

- Synhome "+" (TOOL) Synapse;
48k, 64k, 128k RAM and more Axlon-Ramdisks;

(other programs by Synapse should also support Axlon-Ramdisks)

- Textpro 5.x (TOOL) Ronnie Riche;
48k, 64k, 128k and more 130XE-RD, 26AE & 8ACE RDs;
(here the RD-bank Macros *.ADN and/or *.BNK will require extra RAM
/ Ramdisk; simply don`t use them if you merely have 48k or 64k !!)

- The Browser (TOOL) CTH / Tom Hunt;
64k, 128k and more all Sparta-DOS Ramdisks;

- The Top-3 Demo (DEMO) W.F.M.H.;
64k, 128k 130XE-Ramdisk;
(the dancing girl -"Veronika"- supports 64k and 128k memory!)

- Typesetter XL/XE (TOOL) XLent;
64k, 128k 130XE-Ramdisk;

- [The] X-Files Shpoon;
64k, 128k, 320k 130XE-RD, 26AE or 8ACE RDs?;

- thats all I remember right now...

Note: - Axlon means any Axlon compatible Ramdisk;
- 130XE means 128k memory (64k RAM + 64k RD);
- AE means 192k memory (64k RAM + 128k RD);
- 26AE means 320k memory (64k RAM + 256k RD)
=> Compyshop types (and compatibles, like Mathy`s RD);
- ACE means 256k memory (64k RAM + 192k RD)
=> Newell, Buchholz, Peterson, Rambo XL (and compatibles);
- 8ACE means 320k memory (64k RAM + 256k RD)
=> Newell?, TOMS, Peterson, Rambo XL? (and compatibles);
- ? means I am (generally) unsure -or:- I am not sure if
the given information is correct (just check it out!);

Thats all for now. Thanks and credits go to Russ Gilbert, Lee Barnes
Bernhard Pahl and Mathy van Nisselroy for sharing some info with me.
Any further help or info is welcome !! -Andreas Magenheimer.

Subject: 8.12) What programs require a RAMdisk?

This section by Andreas Magenheimer.

8.12 Atari-programs that require Extra-RAM / Ramdisk:
[This is version 2.10 from October 2003]

A) Non-Demo-Programs:

a) name(s): b) author(s):
c) memory (min.): d) RD-Type(s):
e) notes

- 130XE-(Bank-)Tester (TOOL) various authors (PD);
128k memory (64k RAM + 64k RD) 130XE-Ramdisk (E3,E7,EB,EF);
(1 block with 4 banks, overall: 4 banks);

- 192k-Memory-Tester (TOOL) various authors (PD);
192k memory (64k RAM + 128k RD) A,E Ramdisk blocks;
(2 blocks each with 4 banks, overall: 8 banks);

- 256k-Memory-Tester (TOOL) various authors (PD);
256k memory (64k RAM + 192k RD) A,C,E or 8,A,E blocks;
(3 blocks each with 4 banks, overall: 12 banks);

- 320k-Memory-Tester (TOOL) various authors (PD);
320k memory (64k RAM + 256k RD) 8,A,C,E or 2,6,A,E blocks;
(4 blocks each with 4 banks, overall: 16 banks);

- 576k-Memory-Tester (TOOL) various authors (PD);
576k memory (64k RAM + 512k RD) (overall: 32 banks);
(8 blocks x 4 banks -or- 4 blocks x 8 banks);

- 1088k-Memory-Tester (TOOL) various authors (PD);
1088k memory (64k RAM + 1024k RD) (overall: 64 banks);
(4 blocks x 16 banks for Mathy van Nisselroy`s RD and maybe others);
(8 blocks x 8 banks for Newell, Peterson, TOMS and compatibles);
(16 blocks x 4 banks should also be possible, but do not exist yet!);

- 2112k-Memory Tester (TOOL) Satantronic`s XRAM 0.18;
2112k memory (64k RAM + 2048k RD) (overall: 128 banks);
(8 blocks x 16 banks -or- 16 blocks x 8 banks);

- 4160k-Memory-Tester (TOOL) ??? (authors unknown);
4160k memory (64k RAM + 4096k RD) (overall: 256 banks);
(16 blocks x 16 banks, means blocks 0-F each with banks 0-F);
(note: with 1 PIA chip the main RAM 4000-7FFF is not available!);

- 8256k-Memory-Tester (TOOL) ??? (authors unknown);
8256k memory (64k RAM + 8192k RD) (overall: 512 banks);
(afaik, this upgrade requires 2 PIA chips or some uncool tricks!);

- 16448k-Memory-Tester (TOOL) ??? (authors unknown);
16448k memory (64k RAM + 16384k RD) (overall: 1024 banks);
(afaik, this upgrade requires 2 PIA chips or some uncool tricks!);

=> Note that 2MB-16MB extra RAM / Ramdisks are very uncommon
in the Atari scene! These upgrades were once sold by ICD and
Newell (maybe a few ones also by FTE) and of course they were
and still are selfmade by some crazy Atarians. It is not clear
if there is any software (games, apps., demos) available, that
supports these mega-upgrades fully. Afaik, only few Atarians
have and use them, mostly users of mailboxes / BBS`es...;

- APC-Archiver 1.0 (TOOL) LBS/APC;
320kbytes minimum memory 26AE = no!, 8ACE = YES!;
(It seems like this program does not work on Ataris which have
more than 320kbytes of RAM, i.e. it crashes on my 576k Atari)

- APC-Packer 1.1 (TOOL) LBS/APC;
320kbytes minimum memory 26AE = no!, 8ACE = YES!;
(It seems like this program does not work on Ataris which have

more than 320kbytes of RAM, i.e. it crashes on my 576k Atari)

- Atari Writer Plus Super Menu Ken Siders;
a) AWP + Super Menu 128k RAM 130XE-Ramdisk;
b) AWP-XE + Super Menu 256k RAM 26AE = ???, 8ACE = ???;

- ATOS/ATari Operating System (TOOL) CTH / Tom Hunt;
64k RAM + 16MB-HDD-Partition all Sparta-DOS Ramdisks;
(the standard system is configured for a 16MB harddisk partition,
however it is possible to change this and use an Atari with a big
floppy drive and/or ramdisk; but this requires quite some work!)

- Audio/Studio Master ANG/Mirage;
minimum 320k RAM 26AE = YES!, 8ACE = ???;
(the program is a part of the 4Bit A/D converter software!)

- Boot-Majster (TOOL) Electron;
128k RAM 130XE-Ramdisk;

- Boss-X - Version 10.x (TOOL) MS-Soft / Mirko Sobe;
128k RAM and more all DOS 2 und MyDOS RD`s;

- Boss-XE - Version 8.x (TOOL) MS-Soft / Mirko Sobe;
128k RAM and more all DOS 2 und MyDOS RD`s;

- CAD-XE (TOOL) (HAPS-PD 0350);
128k RAM 130XE-Ramdisk;

- Castle of Blackthorne (GAME) L.o.D. / Thimo Graef;
128k RAM 130XE-Ramdisk;

- Cavepack (Game) KE-Soft / Kemal Ezcan;
XE-Version = 128k RAM 130XE-Ramdisk;

- Computer Baseball (GAME) Douglas Blackwell
128k RAM 130XE-Ramdisk

- Degas-View-XE (Tool) Mat*Rat / Mathew Ratcliff;
128k RAM 130XE-Ramdisk;

- Diskettenverwaltung 130XE (TOOL) (ABBUC PD 86);
(database 130XE) 128k RAM 130XE-Ramdisk;

- Draw XE (TOOL) (ABBUC PD 387);
128k RAM 130XE-Ramdisk;

- Dream Vision (TOOL) (ABBUC PD 480);
(IFF-Viewer) 256k RAM 26AE = YES!! ; 8ACE = ??? ;

- Filemanager/Filecopiers (TOOLS) various authors (PD);
128k=> 1 floppy is enough Sparta and DOS 2.x RD`s;

- Fraktale & Colorprint (TOOLS) (ABBUC PD 349); P.Woetzel;
(fractals & colorprint) 128k RAM 130XE-Ramdisk;

- Gizmo`s Castle (GAME) Black Panther / M. Kugler
XE-Version = 128k RAM 130XE-Ramdisk;

- Grafik-Zeilen-Editor (TOOL) (HAPS PD 0296);
(graphic-line-editor) 128k RAM 130XE-Ramdisk;

- Hi-Res Designer (TOOL) (HAPS PD 0015);
(gr.8 drawing program) 128k RAM 130XE-Ramdisk;

- Hires-Dump (TOOL) (ABBUC PD 113);
(gr.8 print-program) 128k RAM 130XE-Ramdisk;

- Inertia 4.5 (MODplayer TOOL) MadTeam
a) 128k RAM 130XE-Ramdisk
b) more than 128k RAM 26AE = YES!, 8ACE = YES!;

- Kaiser II (GAME) Phoenix Softcrew / C.Strotmann;
a) 64k RAM Version any 64k XL/XE computer;
b) 128k RAM Version 130XE-Ramdisk;
c) 320k RAM Version 26AE = YES!, 8ACE = YES!;
(this game comes in 3 separate versions; plays good on 64k
computers, but needs less disk-swaps on bigger machines !!)

- Kassettencopy (TOOL) (ABBUC PD 466); J.Gernreich;
(Cass.copy) Copy64 = 128k RAM 130XE-Ramdisk;

- Kemna-Video (TOOL) (ABBUC PD 185);
(intro-creator) 128k RAM 130XE-Ramdisk;

- Koala Slideshow XE (TOOL) Charles Johnson/Analog
128k RAM 130XE-Ramdisk

- Koenigsdiamanten (Game) KE-Soft / Kemal Ezcan;
XE-Version = 128k RAM 130XE-Ramdisk;

- Lightraces (Game) (Power per Post);
XE-Version = 128k RAM 130XE-Ramdisk;

- Macro-Assembler-XE 4.32 (TOOL) (ABBUC PD 297); T.Karwoth;
(older version!) 128k RAM 130XE-Ramdisk;

- Macro-Assembler-XE+ 2.x (TOOL) (ABBUC PD 368); T.Karwoth;
(newer version!) a) 128k RAM 130XE-Ramdisk (MyDOS only!);
b) 128k - 1088k (MyDOS only!) 26AE = YES!! ; 8ACE = YES!! ;
(has a rambank-finder program that can be loaded from Basic or the
menu!; the assembler does not work on a CS ramdisk with refresh bugs!)

- Masher-XE V1.0 ??? (author unknown);
minimum 128k RAM 130XE-Ramdisk;
192k, 256k and max. 320k RAM AE, ACE and max. 8ACE RDs;

- Memdrv10 (RAM-Tester TOOL) Andre 'MacFalkner' Bertram
$D301 all Portbits 16k up to 4 MB (all standard RD`s);
$D600 up to ??? MB (Klaus Peters Megaram 3 Ramdisk)
includes 16k Bankswitching and exotic 32k (Buchholz) Bankswitching

- Menu 130 (TOOL) Les Howarth/Page 6
128k RAM 130XE-Ramdisk

- Midi Mate III Hybrid Arts;
128k RAM 130XE-Ramdisk;

- Minesweeper 1-4 (GAMEs) J.R.Chiko/S.A.S.;
128k RAM (4 game versions) 130XE-Ramdisk

- Mister X (Game) (Power per Post);
128k RAM 130XE-Ramdisk;

- Monitors, Debuggers & more (TOOLS) (HAPS PD 0109);
some programs require 128k RAM 130XE-Ramdisk;

- Multi-DOS 130 (TOOL) Kuchera/Excellent;
128k RAM 130XE-Ramdisk;

- Multi-DOS 320 (TOOL) Kuchera/Excellent;
320k RAM 26AE = ???, 8ACE = ???;
(note that Multi-DOS 130 and 320 are no DOS-Versions, they can
be used as *.CMC players; all the rest is unknown to me...)

- Multi-Tasking-OS (various ABBUC magazines);
128k RAM minimum 130XE-Ramdisk (+ST-mouse);

- MTOS XE (Tool) CTH / Tom Hunt;
128k RAM 130XE-Ramdisk;

- MTOS 256 (Tool) CTH / Tom Hunt;
256k RAM (64k+192k) 26AE = NO!! , 8ACE = YES!!;

- [Der] Neffe (Game) (ABBUC PD 52);
(the Nephew) XE-Version = 128k RAM 130XE-Ramdisk;

- Neo-Tracker (TOOL) EPI/Allegresse;
192k RAM minimum 26AE = ??? , 8ACE = ???;

- [The] Newspaper-Editor (TOOL) (HAPS PD 0294 english!);
XE-Version = 128k RAM 130XE-Ramdisk;

- Oelbaron (Game) ??? (author unknown);
XE-Version = 128k RAM 130XE-Ramdisk;

- Programmverwaltung 130XE (TOOL) (HAPS PD 0434);
(database 130XE) 128k RAM 130XE-Ramdisk;

- Protracker 1.5 (TOOL) MadTeam;
128k RAM minimum 130XE-Ramdisk;

- (various) Ramdisk drivers (TOOLs) various authors (PD);
128k RAM and more XE-RD`s, Axlon-RD`s, etc.;

- Rechnen fuer Kinder (TOOLs) (ABBUC PD 85);
(calculations for children) 128k RAM 130XE-Ramdisk;

- Rund um die Ramdisk (TOOLs) (ABBUC PD 383, HAPS PD 1084);
(RD-testers, etc.) 256k RAM and more various XE-RD`s & Axlon-RD`s;

- Sample-Art-XE Mozart/WSL
a) minimum 128k RAM 130XE-Ramdisk;
b) more than 128k RAM 26AE = ???, 8ACE = ???;
(on my 576k-XL the program has some gr.-bugs and crashes very often!)

- Shrink-XE Peter Fitzsimmons;
min. 128k RAM 130XE-comp.-Ramdisks;

- [The] Small Printery (TOOL) Walter Lojek;
128k RAM or more (up to 1MB) 130XE-Ramdisk (minimum!);

- Snapshot (Tool) ??? (author unknown);
128k RAM 130XE-Ramdisk;

- [The] Sound-Utility (TOOL) CTH / Tom Hunt;
(64k), 128k, 256k, 576k, 1MB 130XE-RD; 8,A,C,E Ramdisks;

- Space Harrier (Game) Sheddy / Chris Hutt;
128k RAM 130XE-Ramdisk;

- Strategy Baseball (Game) (HAPS PD 0302);
128k RAM 130XE-Ramdisk;

- Studio/Audio Master ANG/Mirage
minimum 320k RAM 26AE = YES!, 8ACE = ???;
(the program is a part of the 4Bit A/D converter software!)

- Super-Print-Lab-XE (TOOL) (HAPS PD 0909);
(demo-version) 128k RAM 130XE-Ramdisk;

- System+Memory Tester (TOOLs) various authors (PD);
128k RAM and more XE-RD`s, Axlon-RD`s, etc.;

- T-34 (Game) (ANG / Mirage);
128k RAM 130XE-Ramdisk;

- (various.) Tape-Copiers (TOOLs) various authors (PD);
128k RAM 130XE-Ramdisk;

- Tape-Ramdisk-Drivers (TOOLs) various authors (PD);
128k RAM and more XE-Ramdisks;

- Text-130 (TOOL) B.Russmann;
128k RAM 130XE-Ramdisk;

- Textpro "+" (TOOL) Ronnie Riche;
(e.g. Vers. 4.54+) 128k RAM 130XE-Ramdisk;

- The Code Cruncher (TOOL) Soused Teat / A.Bienias;
128k RAM and more XE-Ramdisks;

- The Cruncher 5.0 (Tool) MSL / Magnus;
128k RAM and more XE-Ramdisks;

- The [Sparta DOS] Wedge (TOOL) Ed Bachman;
128k RAM and more + sep. Antic! XE-RD`s with separate Antic!;

- The Works (Tool) CTH / Tom Hunt;
128k RAM and more 130XE and A,C,E Ramdisks;

- [Die] Wuerttemberger-Disk (TOOLS) (ABBUC PD 361, HAPS PD 1050);
also contains the XE-version of Gizmo`s castle => see Gizmo`s Castle!;

- (various) XE-Sectorcopiers (TOOLs) various authors (PD);
128k RAM and more XE-Ramdisks;

- XE-Utilities (10 XE-TOOLs) (HAPS PD 0031);
128k RAM 130XE-Ramdisk;

- XL-2 (Tool) John K. Picken;
128k RAM and more all Sparta und DOS 2.x RD`s;

- Zargon (german text-adv. GAME) (ABBUC PD 611, HAPS PD 0485);
128k RAM 130XE-Ramdisk;

- [Der] Zeitungsredakteur (ABBUC PD 121, german!);
(newspaper-editor) 128k RAM 130XE-Ramdisk;

B) Demo-Programs:

- 130XE-Artshow (Koala!) (HAPS PD 0013);
128k RAM 130XE-Ramdisk;
(simply exchange the picture viewer for use with 48k or 64k Ataris!)

- 130XE-Autoshow (Oldtimers!) (ABBUC PD 191, HAPS PD 0637);
(130XE carshow) 128k RAM 130XE-Ramdisk;
(simply exchange the picture viewer for use with 48k or 64k Ataris!)

- 130XE-Demo S.A.G. (Netherlands);
128k RAM 130XE-Ramdisk;
(written in TB; change all D8: entries into D1: for use with 48k and
64k Ataris; exchange Turbo-Basic XL with TB 3.2q, TB 400 or Frost
Basic for use with older 48k Ataris or (most versions of) Sparta-DOS)

- 130XE-Impossible-Demo Rudy Haegemann / V.T.B.;
128k RAM 130XE-Ramdisk;

- Amiga-Boink-XE Bob Armour;
128k RAM 130XE-Ramdisk;

- American Natives Fox-1 / R.Verdaasdonk;
256k RAM all DOS 2 und MyDOS RD`s;

- (X-Files) Animation-Demo Mad Team;
128k RAM ($04 banks / $4b frames) 130XE-Ramdisk;
(the real name of this demo is unknown to me; maybe it is also called
X-Files-Demo, like the X-Files (picture) demo by Sphoon, maybe it has
a different name; on all tested XL/XE Ataris this demo has graphic bugs)

- Animkomials meet Boris Valleyo Animkomials+Boris Valleyo;
128k RAM (gr.9+11 pictures!) 130XE-Ramdisk; (has a setup!);

- Base-33 AIDS / AIDZ;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> hold down SHIFT upon bootup to get to the Setup-menu!)

- Bill-Pie-Demo ??? (maybe Mad Team?);
a) 128k RAM ($1E frames) 130XE-Ramdisk; RD-block E;
b) 192k RAM ($36 frames) RD-blocks A+E (CS, Rambo, etc.);
b) 320k RAM ($4C frames) RD-blocks 8+A+C+E (TOMS, etc.);
(=> this demo chooses the Ramdisk & Setup automatically! users of
a Compyshop or compatible RD can merely see the 192k version!)

- BMW-Animation MS-Soft / Mirko Sobe;
128k RAM 130XE-Ramdisk;

- CES-XE-Demo XANTH (full version);
128k RAM (580 sectors) 130XE-Ramdisk;

- Cogito-Demo AIDS / AIDZ;
192k RAM 26AE = no?! ; 8ACE = YES!! ;

- Comet-Ani MadTeam;
a) 128k RAM ($36 frames) 130XE-Ramdisk; RD-block E;
b) 192k RAM ($6D frames) RD-blocks A+E (CS, Rambo, etc.);
b) 320k RAM ($96 frames) RD-blocks 8+A+C+E (TOMS, etc.);
(=> this demo chooses the Ramdisk & Setup automatically! users of
a Compyshop RD and compatible can merely see the 192k version!)

- Critical-Sound-Demo Innovative;
128k RAM 130XE-Ramdisk;

- Danielle-(Gr.9-TB-)Ani NBS / Bill Kendrick;
a) 64k RAM (499 sectors) Disk = very slowww!;
b) 128k RAM or Harddisk RD/HD = much faster !!;
(=> use your favourite DOS, Turbo-Basic and a RD/HD driver!)

- Edelweiss-Demo A.R. + C.S.S. + S.V.L.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s you can see all demo-parts, however the mainpart,
known as the Edelweiss-Digi-Sample is shorter & sounds strange!)

- Ergo-Bibamus Quasimodos;
128k RAM (with Setup!) 130XE-Ramdisk;
(well, for 130XE and compatible Ramdisks no setup needed!)

- Extract-Slideshow Bit Busters / Replay;
128k RAM 130XE-Ramdisk;

- Glasshead / HTPPD A.R. + C.S.S.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- Halle 1994b: The Wormhole Magic Arts;
320k RAM 26AE = YES!! ; 8ACE = NO!! ;
(well, this demo does not work at all on 8ACE-Ramdisks!)

- (Atari) Hardware-Demo A.R. + C.S.S.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- Igor Demo MadTeam;
a) 128k (Part 1, Part 2) 130XE-Ramdisk;
b) 192k (Part 3) 26AE = YES!! ; 8ACE = YES!! ;
c) 320k (Parts 1+2+3) 26AE = NO!! ; 8ACE = YES!! ;
(=> the demo normally runs a setup for 320k memory; but there are 2-3
batch files for each Setup; goto DOS and install the one you want or
need with the JOB command: JOB @xxxx.BAT [RETURN], then reboot disk)

- Imperial (Sounddemo) Innovative;
320k RAM 26AE = YES!! ; 8ACE = YES!! ;

- Impossible but Real! MacGyver / AIDS;
256k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> press A for 8ACE-RDs, press B for manual setup of other RDs)

- Isolation Demo Masters of Electric City;
128k RAM 130XE-Ramdisk;

- Journey Polynomials
a) 128k RAM ($36 frames) 130XE-Ramdisk;
b) 320k RAM ($96 frames) 26AE = YES!! ; 8ACE = yes!? ;
(=> this demo chooses the Ramdisk & Setup automatically! the demo
has quite some graphic bugs on 8ACE ramdisks, but is viewable!)

- Journey into Sound DGS / Dean Garaghty;
128k RAM 130XE-Ramdisk;

- Khai-Et AIDS / AIDZ;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> hold down SHIFT key upon bootup for the Setup-menu)

- Killer-Whales MadTeam
a) 128k RAM ($2E frames) 130XE-Ramdisk; RD-block E;
b) 192k RAM ($54 frames) RD-blocks A+E (CS, Rambo, etc.);
b) 320k RAM ($94 frames) RD-blocks 8+A+C+E (TOMS, etc.);
(=> this demo chooses the Ramdisk & Setup automatically! users of
a Compyshop RD and compatible can merely see the 192k version!)

- Lajf-Demo MadTeam;
128k RAM 130XE-Ramdisk;

- Landscape-XE-Demo Karl Pelzer;
128k RAM 130XE-Ramdisk;

- Megablast-Sounddemo DGS / Dean Garaghty;
128k RAM 130XE-Ramdisk;

- MTV`s-Danielle see: Danielle-Ani.;

- Nascar-Animation MS-Soft / Mirko Sobe;
128k RAM 130XE-Ramdisk;

- Nonjm-Demo TIGHT;
128k RAM 130XE-Ramdisk;

- Numen-Demo Taquart;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> the newer/updated version has an auto-setup for 26AE & 8ACE RD`s!)

- Owca-Demo Animkomials;
128k RAM 130XE-Ramdisk;

- Owca-2-Demo Animkomials;
128k RAM 130XE-Ramdisk;

- Parrot-X-MAS-Demo Anthony Ramos;
128k RAM 130XE-Ramdisk;

- Pedrokko-Sounddemos Pedrokko (10 Disks / 20 S.);
128k RAM (some demos) 130XE-Ramdisk;

- P.I.T. - Demo Quasimodos;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> a menu appears automatically; setup 15 banks to run the demo!
this demo does not work correct on Ramdisks with refresh-bugs!)

- Raving Vierpz Pentagram;
128k RAM 130XE-Ramdisk;

- Raytracing 320k Elsni/Stephan Elsner;
320k RAM (TB listings!) 26AE = NO!! ; 8ACE = YES!! ;

- Raytracing 1MB Solocoder of A.C.E.;
1088k RAM (K.Peters Megaram 3) works only on K.P.-1MB-RD !!;
(=> Bootdisk with 8 disksides; loading time: approx. 17 minutes!)

- Raytracing Animation Karl Pelzer;
128k RAM 130XE-Ramdisk;

- Revenge of Hacker Rasero Team;
192k RAM (RD-blocks A+E) 26AE = YES!! ; 8ACE = YES!! ;

- Sweet Fantasy TIGHT;
128k RAM 130XE-Ramdisk;

- Sheol Bit Busters;
320k RAM 26AE = NO!! ; 8ACE = YES!! ;
(on 26AE / CS - Ramdisks you will merely receive an error
message like this: sorry, this demo needs 256k of xms RAM)

- Shiny-Bubbles-XE Brian Paul / LACE;
XE-Version = 128k RAM 130XE-Ramdisk;

- Stash-Demo Rasero-Team;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> in the first menu press A for 8ACE Ramdisks or press B for
manual setup of other Ramdisks like Compyshop; in the second menu
press A for 8ACE Ramdisks or C for manual input of Rambanks; don`t
press B -Compyshop- here, since this CS setup is faulty/wrong)

- Starwars-Demo A.R. + C.S.S.;
320k RAM (hold down Option-Key!) 26AE = YES!! ; 8ACE = yes!? ;
(the program checks if Basic is disabled via the Option key, thus
an OS with inverted Basic / Option-key function does not work here!;
with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- The Asskicker Shadows Computer Group;
128k RAM 130XE-Ramdisk;

- The Turtles-Demo (Animation!) Ultra-Software;
128k RAM 130XE-Ramdisk;
(the file version by John E. requires 128k, maybe this bootdisk also)

- The Wormhole Magic Arts;
320k RAM 26AE = YES!!, 8ACE = NO!!;
(this demo is part of the Halle Project 1994 demo, side B!)

- Timekeep(er) New Generation;
320k RAM ??? 26AE = NO!! ; 8ACE = YES!! ;
(after loading on an 8ACE-RD be patient! the demo requires some time
for depacking - don`t switch off when you see a black screen, wait!)

- Tit-Demo MadTeam;
256k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> the Setup appears automatically; accept or change it !)

- Too-Hard-2 Animkomials (Rippers!);
128k RAM 130XE-Ramdisk;

- Too-Hard-3 Animkomials (Rippers!);
192k RAM 26AE = YES!! ; 8ACE = YES ;
(=> the Setup appears automatically; accept or change it!)

- Too-Hard-4 Animkomials (Rippers!);
320k RAM 26AE = YES!!, 8ACE = YES!!;
(=> the Setup appears automatically; accept or change it!)

- Total Daze TIGHT;
128k RAM 130XE-Ramdisk;

- Trabant Demo / HTPPD A.R. + C.S.S.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- Trip-6-Demo Shadows Computer Group;
128k RAM 130XE-Ramdisk;

- Ultra Taquart;
128k RAM 130XE-Ramdisk;

- Vengeance Excellent;
128k RAM 130XE-Ramdisk;

- Vent Excellent+Pentagram;
128k RAM 130XE-Ramdisk;

- Video Blitz Helvetica Bold;
128k RAM (+sep. Antic!) 130XE-Ramdisk + sep. Antic!;

- WAF-Demo (Side B) ABBUC regional group W.A.F.;
128k RAM (2 Parts!) 130XE-Ramdisk;
(=> here the Raytracing and Vector part require 128k memory!)

- Worms-Demo Datri;
320k RAM 26AE = yes!? ; 8ACE = YES!! ;
(with 8ACE-RD`s you see the complete+bug-free version; with 26AE
RD`s you see a shorter and very buggy version with many deja-vues!)

- X-Demo Mad Team;
320k RAM 26AE = YES!! ; 8ACE = NO!! ;

- Xyberscape-XE Bill Le Masurier;
128k RAM 130XE-Ramdisk;

- Zero-Demo New Generation;
128k RAM 130XE-Ramdisk;

Notes: - 256k Compyshop-Ramdisks, 256k K.Peters-Megaram 1,2,3
and Mathy`s 1024k RD have/use 26AE Ramdisk blocks;
- afaik all other 192k / 256k Ramdisks have ACE (8CE)
or 8ACE blocks (Newell, Peterson, Buchholz, TOMS, etc.);
- ??? means unknown; TB means Turbo-Basic (XL);
- HTPPD means Hobby-Tronic-Power-Pack-Demo;
- YES!! means the demo works as it should (100% correct);
- yes!? means the demo works but has some bugs or is shorter
(50-80% correct);
- no?! means the demo almost does not work and has many bugs
(10-40% correct);
- NO!! means the demo does not work at all - it refuses to load
or crashes shortly after loading (0% correct);
- sep. Antic means separate Antic access of the Ramdisk;
(only 2 programs seem to exist: Video Blitz & The Wedge);

Thanks and credits go to Russ Gilbert, Bernhard Pahl and Mathy van
Nisselroy for sharing their info with me. Any corrections and/or updates
are welcome... - Andreas Magenheimer

Subject: 8.13) What voice/sound synthesis software is there for the Atari?

This section by Andreas Magenheimer.

- S.A.M. - the Software Automated Mouth by Don't Ask Software (a software package; you can find it at Don`s / the author's homepage: http://www.retrobits.net)
- Softsynth (a PD program, that creates sounds and sound effects via modulation of the tv/monitor speaker; available from the ABBUC library);
- MOD-Sounds (sound-MODulation, allthough I do not know any software to create such sounds on an A8, some programs to edit (Protracker) and playback (Inertia, Modplayer, Neotracker, etc.) these sounds do exist);

Subject: 8.14) What programs support stereo and upgraded sound?

This section by Andreas Magenheimer.

There is already a lot of stereo software for the upgraded Atari computers available, of course most of these programs are limited to certain/special upgrades and merely perform their stereo effects on these items (with otherwise upgraded or non-upgraded Ataris, the sounds or programs will only play in mono):

a) software for the various stereo-upgrades:

- stereo with one Pokey (POPS-software): Afaik for this kind of upgrade, there merely exists a patched version of the Pokey player program, I am not sure if there is anything else for it; anyway, refer to Analog Computing, issue 66, november 1988, pages 54 -60;

- stereo with two computers (thus two Pokeys): Afaik for this simple trick there merely exist two programs, they are "Perestroyka" and "Sky Network" by T.Liebich. In order to achieve the stereo effect, you have to boot/load one of these demos on two computers (connected to different TV's or monitors, there is no need to connect the computers to each other!). When done, press 1-5 on the first computer while pressing Shift-1-5 on the second computer. Meaning, if you want to hear the first sound in stereo then press 1 on computer 1 and press Shift-1 on computer 2 simultanously (that`s a little tricky, I know). If you want to hear sound 5 in stereo, then press 5 on computer 1 and Shift-5 on computer 2 simultanously. Tricky at first, but sooner or later you will get the hang of it. Of course you can also connect the two Ataris to a hifi-system, using the sound output of one Atari for the left channel and the sound output of the other Atari for the right channel...

- stereo-sound with Stereo-Blaster Pro (Portronic/AMC): Afaik there was at least one demo disk (early version was single-sided only, later versions were double-sided), that contained some demo-software, namely the simple "Stereo-demos" (by AMC, side 1) and the "Stereoblaster-Demo" (by HU-Soft, side 2 if available). The Stereoblaster demo was written in Turbo-Basic and played back via Compiled-Turbo-Basic, it uses Chaos Music-Composer Sounds (*.CMC) and a few of these provide stereo effects, if equipped with a stereo-blaster-pro and a hifi-system. The simple stereo-demos included some programs written in Atari Basic, for example

a (pong-like) bouncing ball and a flying helicopter. Equipped with a stereo-blaster-pro and a hifi-system, one could see the ball bouncing left and right and simultanously hear the sound fx on the left or right channel. The helicopter started at the left side and produced a loud sound on the left channel, when it was flying to the right side, the sound faded on the left channel and got louder on the right channel, until the helicopter disappeared (and the sound completely faded away). There were some more of these simple demos available, but I don`t remember them anymore.

- Stereo with two Pokeys: There already exist dozens of sounds and demos, that support this upgrade, most of these programs were made in Poland, but a few sound-demos were also made in other countries. Anyway, the following programs support stereo via two Pokey chips:

- Alf-Demo by the Unknown Base (Netherlands);
- Alpha-Demo by GMG (Slovakia);
- AMS-Stereo player by ??? (author unknown), USA;
(there are at least two AMS-stereo-players, that let you play *.AMS sounds in true stereo or at least simulated stereo!);
- ARS-Mori 16k Intro by Tristesse (music shortened and ripped from Drunk Chessboard by Infinity!), Poland of course;
- Ballada sound by DJ V / BK (Poland);
- Base 33 by AIDS (msx by Greg, Poland);
- Chaos Music Composer version x.x patched by ??? , Poland;
(=> the original version by Janusz Pelc / LK Avalon is only mono, but there is a patch available, as well as various patched CMC versions on the internet; thus *.CMC sounds can be generated in stereo!);
- (many) *.CMC sounds created by one of the many stereo-versions of Chaos Music Composer;
- Cogito-Demo by AIDS (Poland)
- Do you see the light? sound-demo by Roemer of UNO (Germany);
- Draconus, patched version by ANG and/or Micro Discount (NL/UK)
(the original version by Zeppelin games is only mono!);
- Drunk Chessboard by Infinity (music by X-Ray!), Poland;
- Dynakillers (Game) by GMG, Slovakia;
- First of All (sound) by Raster, Czech Republic;
- Impossible but Real Demo by MacGyver (Poland);
- King of Aggregat by X-Ray / Slight (Poland);
- Megaplayer Versions 1.6 and 2.0 by MacGyver (Poland)
(=> and thus all *.CMC, *.MPT, *.TMC, etc. sounds played with this sound-player tool can be heard in true or simulated stereo!);
- Multi-Pro-Tracker 2.4 (various versions) by Jaskier/Taquart?
(=> thus *.MPT sounds can be generated in stereo!), Poland;
- (many) *.MPT sounds created by the stereo-version of Multi Protracker;
- Nazebany by DJ V / BK (Poland);
- Overload sound by X-Ray / Slight (Poland);
- Raster Music Tracker 1.x by Raster, Radek Sterba (a PC program that creates mono/4-channels or stereo/8-channels *.RMT sounds that can be played back on the A8 or any Atari 800/XL/XE emulator);

- (most) *.RMT sounds created by Raster Music Tracker;
- Stereo-Patch for Pokey Player by ??? (author unknown)
(=> thus all Pokey-Player / *.V sounds can be heard in stereo!);
- Stereo-Patch for Softsynth by Freddy Offenga (Netherlands)
(=> thus Softsynth will create stereo-sounds!);
- Stereo Patch for World of Wonders by Freddy Offenga (Netherlands)
(World of Wonders is a great Softsynth sound-demo!);
- Still Alive (TMC-sound) by Greg, Poland;
- Time sound by X-Ray / Slight (Poland);
- Theta-Music-Composer version 1.x by Greg (Poland)
(=> thus *.TMC sounds can be generated in stereo!);
- (most) *.TMC sounds created by Theta Music Composer;
- Vanity sound by Kuchara / Excellent (Poland) ;
- Worms (320k-Demo) by Datri, Czech Republic;
- Zybex, patched version by ANG and/or Micro Discount (NL/UK)
(the original version by Zeppelin games is only mono!);
- thats all what I found so far... (A.M.)

b) software for other sound enhancements:

- enhanced-sound with Covox: Afaik this upgrade will playback digitised or
sampled sound in 8Bit resolution rather than in 4Bit resolution. The
following programs support the Covox-Upgrade:
- Inertia 2.9, a MOD-player by MadTeam;
- Inertia 4.5, a MOD player by MadTeam;
- Protracker x.x, a MOD-editor and player by ???;
- NeoTracker 1.x, a MOD+NEO+... player by EPI/Allegresse;
- that's all I have found so far;
note that all programs (except neo-tracker?) will still work with pokey...;

Subject: 8.15) What games support online action via modem?

This section by Andreas Magenheimer.

- Modem Chess, a PD game in Basic by ???
- Modem-Battleships, a PD game in Basic by ???
- Tele-Chess, a PD game in Basic by ???
- probably some more games...

(I have also seen an advert from GCP in Analog or Antic, that listed
the following games: The City, Cybertank, Cybership, Bio-War, Lords
of Space; I am not sure if they are all available for the Atari, A.M.)

To play these games online, one would not only require an Atari computer,
but also a modem, a modem-driver and/or a terminal program (like Kermit,
Bobterm, Teleterm, A-Term, Ice-T, BBS Express Pro, etc.). See also the
sections 7.8, 10.1 and 10.2 which tell you more about modem/terminal
programs and modem hardware for the Atari...

Subject: 8.16) What programs support Atari computer networking?

This section by Andreas Magenheimer.

There are two different hardware add-ons which provide a "computer-
network" (two or more Ataris linked together). Thus, there is software
that supports either one or the other hardware (namely Gamelink-1 or
Gamelink-2). The following software supports the networking hardware:

- Gamelink-1 (by Dataque):
- info-text about GL-1 and where to buy it, by Dataque;
- Tic-Tac-Two by J.Potter/Dataque, a tic-tac-toe clone;
- Modem-Battleships, patched by Rick Detlefsen for Gamelink-1;

- Gamelink-2 / Multilink (by Dataque & Bewesoft):
- info-text about GL-2 and where to buy it, by Dataque;
- info text about Maze of Agdagon demo, by Dataque;
- Maze of Agdagon demo (1 player only) by Dataque;
- documentation for Maze of Agdagon (full version) by Dataque;
- Maze of Agdagon (full version, 2-8 players) by Dataque;
- description of multilink/gamelink-2 hardware and schematics by
Bewesoft (two texts, one in czech and one in english; schematics
presented as an Atari Gr.8 picture for a) easy-2-computer hardware
and b) more complicated 2-8 computer hardware);
- Multi-Dash (2-8 players, XL/XE only) by Bewesoft;
- Multi-Race (2-16 players, XL/XE only) by Bewesoft;
- description of "how to program networking games for multilink
[gamelink-2] hardware" (text available in english and czech, with
lots of source codes and OS adresses/variables/...) by Bewesoft;
- Multi-Worms (2-8 or 2-16? players, XL/XE only) by Bewesoft;
- complete + documented source code for Multi-Worms by Bewesoft;
- "starter-kit" module to use in your own networking-games by Bewesoft
(free use of this module is granted by Bewesoft/Jiri Bernasek);

Subject: 9.1) How can I work with .arc files on my 8-bit Atari?

ARC.EXE for MS-DOS was released by System Enhancement Associates (SEA) around
1985. It will compress and store groups of files as one file, making it
easier and quicker to download programs and support files at once. Because of
the ease of use and availability of this program, it quickly became the
defacto standard for file archives on Intel-based IBM machines. Files
compressed and stored with ARC or a compatible utility are normally given the
filename extender ".arc".

The 8-bit Atari computers have several software utility options that are fully
compatible with ARC.EXE, the most important being:

Super UnArc 2.4 and Super Arc 2.4 - shareware by Bob Puff, released 01/31/89
Available:
http://www.nleaudio.com/css/files/superarc.arc (complete package + docs)

Also, SpartaDOS X includes a fully compatible ARC command for both creating
and extracting .arc files.

Subject: 9.2) What file formats for entire disks/tapes/cartridges are there?

It is now common, especially when working on Windows PCs or Macs, to work with
Atari software as files or "images" containing the data from an entire disk,
data cassette, or cartridge as duplicated from the native media for the Atari.

Here is a list of file formats, arranged by their associated filename
extensions. These are all filename extensions used to name files containing
entire 8-bit Atari floppy disk images, cassette tape images, or cartridge
images.

.DCM -Image format invented by Bob Puff for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.
DISKCOMM is at http://www.nleaudio.com/css/files/DISKCOM.ARC
DCM specs at: http://home.planet.nl/~ernest/diskcomm.zip

.ATR -Image format invented by Nick Kennedy, for his SIO2PC project.
Used with most 8-bit Atari emulators running on other computer
platforms. SIO2PC is at http://www.tcainternet.com/wa5bdu/

.XFD -Image format invented by Emulators Inc, for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used with ST Xformer and PC Xformer emulators.
Xformer is at http://www.emulators.com/

.PRO -Image format invented by Steven Tucker, for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.
APE and APE ProSystem are at http://www.atarimax.com/

.SCP -SpartaDOS SCOPY image file. SCOPY was a utility by ICD.

.DI -Image format invented by Kolja Koischwitz & Christian Kruger for their
800XL DJ emulator for the Atari ST.

.CAS -Cassette image format invented by Ernest R. Schreurs, for his
Digital Cassette Image system (includes CAS2SIO, WAV2CAS, and CAS2WAV
MS-DOS utilities. See: http://home.planet.nl/~ernest/

Atari Disk Image FAQ (Steve Tucker)
http://www.atarimax.com/ape/docs/DiskImageFAQ/

One tool for converting among all of these disk image formats is:
Acvt v1.07 by Jindrich Kubec, found at http://jindroush.atari.org

---

Subject: 9.3) How can I copy my copy-protected Atari software?

Russ Gilbert writes:

Almost all commercial software for the A8 is/was copy protected. For boot disks, this usually involved a large number of special formatting that couldn't be copied using ordinary sector copiers. Usually the boot process involved checking to see if a certain sector error occurred, then proceeding. If the error did not occur, the disk was a copy and would not work.

For carts, usually the method of protection was to write to the cart area of memory and see if the value changed. If the value changed, the cart program was in RAM, not ROM and would fail to operate.

For tapes, again a fair number of schemes were used. Some varied the speed at which the tape loaded. I'm not familiar with tape protection schemes.

With all software media (cart, tape, disk), there may be program encryption, which must be decrypted before the program can run. This to make more difficult disassembly of the program.

There were/are a number of products to defeat copy protection/allow copying of protected software for the A8. The most common way to defeat copy protection was to disassemble the software and revise sections of code so that the copy protection was defeated. A software with defeated copy protection is called a 'cracked' software. The basic procedure is to understand how cart/tape/disk software initializes, loads and runs. Usually make a file out of the software and 'follow the code', starting with loading of the program, to decryption to the actual running of the program. Today, it is unnecessary to copy original commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product. The APE ProSystem, by Steven Tucker, in the registered version of this shareware allows making disk images called 'Pro' images. APE (Atari Peripheral Emulator) requires a cable, called the SIO2PC cable, that connects the A8 13 pin serial port to a serial port on the IBM PC clone. To make 'Pro' images, a special adapter cable is needed, not just the 'standard' SIO2PC cable. The 'Pro' image can 'capture' the copy protection of an original commercial disk. The 'Pro' image can then be loaded into an A8 using the APE registered version software, thus backing up your original disk software. Note the 'Pro' image will only be of use to person(s) owning registered APE software and 'Pro' adapter cable.

Subject: 10.1) What programs can log in to other computers via modem?

Here are some of the more popular PD/freeware/shareware terminal emulator and related programs available. Use one of these programs for accessing a dial-up Bulletin Board System (BBS) with your Atari, or for accessing a dial-up "shell account" with your Internet Service Provider (ISP). Dial-up shell accounts are no longer widely available here in the 21st century! (There is no general-purpose PPP capability for the 8-bit Atari that I am aware of.)

ATAR-Z-MODEM 1.2, 5/29/94, shareware by Larry Black
Emulates: n/a
Text: 40 columns in gr.0
File Xfer: ZMODEM download
Autodial: No
Backscroll buffer: No
Capture-to-disk: no
Summary: Intended to be used as an external ZMODEM receive utility in conjunction with other terminal programs, especially BobTerm
http://www.umich.edu/~archive/atari/8bit/Telecomm/Protocols/atzmod12.arc

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 release that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
Available: http://www.nleaudio.com/css/ (version 1.21)
ftp://ftp.spudster.org/pub/atari/cth/terminal_programs/BOBTM122.ARC (com only)
http://people.a2000.nl/becotel/archive/bobt123.arc (1.23)

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
ftp://ftp.spudster.org/pub/atari/cth/terminal_programs/FLICK051.ARC

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
Available: http://www.cs.huji.ac.il/~itayc/

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: k65v37.arc ; k65doc.arc - docs ; k65src.arc - source

OmniCom by CDY Consulting (David Young)
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit
filename: omnicom.arc

PabQwk 2.0, 1 Feb 1994, shareware by Low-Budget Productions (Pab Sungenis)
Requires: 128K XL/XE
Emulates: n/a
File Xfer: QWK upload/download
Summary: The Professional QWK reader for the Atari 8-bits. (QWK is a
packet format created in the IBM BBS community for reading mail
offline.)
http://people.a2000.nl/becotel/archive/pabqwk20.arc

Term80 1.6 (8.25.95), by CTH Enterprises (Tom Hunt)
Requires: MIO or Black Box
Emulates: ANSI

Text: 80 columns in gr.8
File Xfer: XMODEM receive, YMODEM send/receive
Autodial: Yes
Brackscroll buffer: No
Capture-to-disk: Yes
Summary: Designed for calling IBM ANSI BBSs at the highest possible
speeds supported by the MIO and Black Box (14.4 Kbps)
Available: http://cth.dtdns.net/Featured/term80/term80.html

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: vt850b1.arc

Subject: 10.2) What programs can I use to host a BBS on the Atari?

The 8-bit Atari was particularly popular for hosting a dial-up Bulletin Board System (BBS). Uploading/downloading files, online messaging, even online gaming services can all be hosted on an 8-bit Atari operated as a dial-up BBS.

This section attempts to list all BBS programs for the Atari. Of these, BBS Express! Professional and Carina II BBS seem to be programs that stand up well even today.

Contributors to this section include: Winston Smith, Steven Sturza, Chad Hendrickson, Don Fanning, Matt Singer, Pete Davis, Jeff Williams

o AMIS BBS -- The Atari Message Information Service, public domain.
The "granddaddy" of BBS programs for the 8-bit Atari.

The AMIS BBS was written in BASIC by people from the Michigan Atari Computer Enthusiasts. It included designs for a ring-detector. You needed a sector editor and had to allocate message space by hand, hex byte by hex byte.

Several versions of AMIS:
* Standard AMIS
* MACE AMIS - from the Michigan Atari Computer Enthusiasts
* Fast AMIS
* MPP AMIS by Matt Pritchard
* TODAMIS 1.0, for 1030/XM301, 1986, Trent Dudley

o ATABBS -- Rod Roark writes (3/12/03):
This is really straining my memory -- don't recall exactly
when I wrote the thing (maybe '80 or '81), but as far as I
know ATABBS was the world's first BBS for the Atari 400/800.

I ran it out of my condo in Atlanta on a 48K 400 with an 80K
floppy drive and a 300 bps Hayes Smartmodem. The 48K memory
module was a third party add-on, not Atari's.

It was written in Atari BASIC with a few bytes of machine
language thrown in.

o ATKeep -- An Atari 8-bit version of CITADEL BBS, by Brent Barrett
ATKeep is a Citadel-like BBS system for eight-bit Ataris. ATKeep runs under SpartaDOS and requires BASIC XE and 128K of RAM. Originally "MBBBS (Message Base Bulletin Board System) 1.0, March 24th, 1986" MBBBS was changed to Atari Keep, or, ATKeep for short, around version the time version 4.0 was released (June 15, 1986).

ATKeep 7.0 finally took the aide and cosysop commands out of a menu section and put them into extended commands, where they belonged. It also added a SYSOP level command set. Users were no longer "users" "aides" or "cosysops," they had become level "A" (SYSOP) through level "Z" (READ ONLY). The system had become extremely complex. Public, hidden OR password protected PRIVATE rooms. Each room now had its own access level (thus keeping people of lower level from getting in EVEN if they knew the room name). Each room was assigned a RWRT (or Read WRiTe status), which determined who could enter messages in it, and whether or not public or private messages, or both were to be allowed.

Before version 7.0, ATKeep only worked with the Atari 1030 or XM301 modems. ATKeep 7.0 was rewritten to accomodate the 850 or PRC interface allowing use of any Hayes compatible modem.

ATKeep version 7.50 was released (1987), was version 8 released?

o BBCS -- Bulletin Board Construction Set, by Scott Brause/Antic, 1985
A machine language program, developed as the Jersey Atari Computer Group (JACG) BBS system.

BBCS was known for it's great flexibility. The sysop was offered easy customization by the use of menus. Many BBSes before it required that you had to actually change the BASIC code in order to customize your BBS.

Unfortunately, it also suffered from a reputation for stability problems.

o BBS Express! -- 1986, Leith Ledbetter/Orion Micro Systems
Written in compiled Action!. 1030/XM301 and 850 versions.

o BBS Express! Professional ("Pro!")--6.0b 1999, Lance Ringquist/Video 61
Originally by Keith Ledbetter/Orion Micro Systems.
See also http://cth.dtdns.net/pro/pro1.html

Written in 100% machine language.

Requires XL/XE, SpartaDOS 3.2+, hard drive highly recommended, or at least a large ramdisk. R-Time 8 is fully supported.

o Carina II BBS -- v2.7 (1995), David Hunt/Shadow Software
Carina II was originally developed by Jerry Horanoff.

Requires an XL or XE computer, at least 500K of storage capacity (including ramdisk and drives), and SpartaDOS version 2.3 or greater.
Recommended: 192K ramdisk or greater, and an R-Time cartridge.
Fully supported: An MIO interface and a hard drive.

More Carina II information and links:
http://jybolac.virtualave.net/carina/

Pete Davis writes (15 Aug 2002):
Carina was a pretty powerful BBS system. Though it was written in BASIC (with a number of machine language routines), it was expandable and had was able to load new BASIC programs with the BBS running. In fact, it was quite modular and would load different sections of the BBS at runtime. I actually used it when I ran a BBS some time back.

o Carnival BBS -- essentially AMIS with an overlay to allow for private messages and passwords.

o FoReM BBS -- Friends of Rickey Moose BBS. By Matt Singer.
At the time, there were a lot of BBSs around called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed in BASIC and was somewhat crashy. I think that this is the great-grandparent of the FOREM-XE BBSs that survive today.

Matt Singer writes:
FoReM BBS derived from an early AMIS. When multiple message areas were added the name was extended to FoReM 26M. Then, When OSS released BASIC XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most of the Assembler routines (where is he now?).

o FoReM XL BBS -- by Matt Singer.
FoReM BBS updated to take advantage of BASIC XL from OSS.

o FoReM XE BBS -- by Matt Singer
This version of FOREM BBS requires the commercial BASIC XE cartridge in order to run. It is in the public domain and can import and export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only, control ATASCII graphics are reserved for message data-structure bytes).

o FoReM XE Professional BBS / FoReM XEP BBS -- by Len Spencer
A re-write of FoReM XE BBS, last version was 5.4, Jan 5 1993.
FXEP requires an XL/XE computer with at least 128k of memory, the BASIC XE cartridge from OSS/ICD, SpartaDOS 3.2 (this program will NOT work with any other version), and at least 500K of storage.

FXEP is in the public domain, http://members.aol.com/lenspencer/

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston, Massachusetts, USA, area.

"1983: Nite-Lite B.B.S. goes on the air. (Was it running A.M.I.S. ?) It is called "Nite-Lite" because the computer monitor casts an eerie glow about the room. 1984: Paul Swanson writes his own BBS hosting software for the ATARI 6502 8-bit computer. He names it "Nite-Lite". The Nite-Lite BBS hosting

software goes on to be the most successful commercial BBS software ever written for the ATARI 6502 8-bit computer. 1989: Nite-Lite BBS puts in a second line. (MichTron boards eventually take the place of all of the ATARI Nite-Lite boards.)" - Winston Smith

This BBS was the first to support a RAMdisk, which Paul Swanson called a "V:" device for "virtual disk". This BBS was written in Atari BASIC and required a joystick hardware "dongle" device. This was notable as being one of the first Atari 8-BIT BBSs that could actually go for a week without having to be rebooted. Pointers to the message base were kept in an Atari "very long string" (for which Atari BASIC is famous). The BBS would only have problems (for the most part) if this string became corrupted.

o OASIS (the commercial version) / OASIS Jr. (the pd version)
Originally by Ralph Walden, then Leo Newman took it over, followed by Glenda Stocks/Z INNOVATORS, then Alf (Jeff Williams).

All machine language. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". An excellent message system, and a complex file system. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). OASIS IV performs networking.

Glenda Stocks writes at http://world.std.com/~snet/glenda.htm :
I purchased the source code rights to OASIS and began marketing the BBS software to Atari 8-bit enthusiasts around the world. I felt that I had the superior BBS software because I had programmed in the ability to run external programs, including online games and user surveys. I also had added color prompts for IBM clone users who called Atari boards running my OASIS software. Sometime in 1991...I sold the rights to OASIS to a man in Canada..

Jeff Williams ("Alf") writes: (12/6/02)
OASIS was around prior to either PRO or BBS Express IIRC. I don't know when exactly it showed up, version 3.09 was the first one I remember seeing. What made it nifty was it was very fast, being all assembler, and having some different features that things like Forem & Carina didn't have. Compared to something like Forem MPP at the time, it was kind of amazing.

Ralph Walden sold it to Glenda Stocks, who chopped it up into modules and sold it as ver 4.7. PRO was out by then, and was a much more complete offering imo. Glenda wrote some modules for 4.7, but it never really went anywhere because the architecture was so cramped with her changes.

Eventually she gave up and sold me the source. I looked it over and realized it was a mess and nothing was going to happen with it. I worked on a version 5 for a while, but never made much progress.

o SMART BBS -- by Marco Benton.
This program is written entirely in BASIC. It expects to be running under a SpartaDOS environment. This BBS program uses a "modem clock string" rather

than an R-Time 8 cartridge in order to retrieve the current time. It also comes with an Atari BASIC game door called "Sabotage".

Subject: 10.3) How can I read/write 8-bit Atari disks on an MS-DOS PC?

There are several programs that allow an MS-DOS system to work with an Atari-format 5.25" diskette. Each of these work with the Atari SS/DD 180K format, so you'll need an Atari DOS and disk drive capable of this format.

#1 Choice:
AtariDsk V1.2 (c) 95-12-09 by HiassofT (Matthias Reichl)
http://www.horus.com/~hias/atari/

#2 Choice:
MyUTIL by Mark K Vallevand. Based on Charles Marslett's UTIL.
http://www.umich.edu/~archive/atari/8bit/Diskutils/Transfer/myutil.zip
Includes SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

Other similar utilities:
ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
www.umich.edu/~archive/atari/8bit/Unverified/Diskutils-redist/atario21.arc
SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
http://www.umich.edu/~archive/atari/8bit/Diskutils/Transfer/sr.arc
UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks.
http://www.wordmark.org/

Here's some advice on using the above utilities from Hans Breitenlohner:

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width.
The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on

either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo sums it up this way:
So a basic rule of thumb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above mentioned utilities work with SS/DD 180K Atari-format disks or
SS/DD 180K SpartaDOS disks, the following combination of utilities has been
used successfully to read SS/SD 90K Atari-format disks. So if you only have
standard Atari 810 and/or Atari 1050 drives, you could look into:

AnaDisk -- now a product of New Technoligies Inc. (NTI)
See: http://www.forensics-intl.com/anadisk.html
The current version is "not made available to the general public" (!)
Previously a product of Chuck Guzis @ Sydex, http://www.sydex.com/
Older versions available: http://ch.twi.tudelft.nl/~sidney/atari/
- Reads/Writes "any" 5.25" diskette

DeAna by Nate Monson
Available: http://ch.twi.tudelft.nl/~sidney/atari/
- converts AnaDisk dump files from Atari format

See http://ch.twi.tudelft.nl/~sidney/atari/ for tips on using this
combination of utilities.

Preston Crow writes:
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.

For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 10.4) How can I read/write MS-DOS PC disks on my Atari?

Several 3rd-party hardware upgrades add the capability of working with
MS-DOS diskettes to your Atari system:

Happy 1050 upgrade for the Atari 1050
-- read/write 180K 5.25" MS-DOS floppies

CSS XF Single Drive Upgrade for the Atari XF551
-- replace the 5.25" mechanism with a 3.5" mech.
-- read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFsingdrup.htm

CSS XF Dual Drive Upgrade for the Atari XF551
-- add 3.5" drive without losing the 5.25" drive
-- read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFdualdrup.htm

CSS Floppy Board, for the CSS Black Box
-- adds support for PC 720K and 1.44MB 3.5" drives to your Atari system
-- adds support for PC 1.2MB and 360K 5.25" drives to your Atari system
-- read/write 5.25" and 3.5" MS-DOS disks in your PC drives with your Atari
see: http://www.nleaudio.com/css/products/floppy.htm

Subject: 10.5) How do I transfer files using a null modem cable?

This section by Russ Gilbert.

Q: How do I connect two computers using a null modem cable?

A: You need a term program and RS 232 ports on both
computers. The RS 232 ports need to be connected
together using a 'null modem cable'.

For up to 4800 baud, no flow control lines need be
connected. Just cross the transmit and receive lines
and join the grounds together. Transmit is pin #2,
receive is pin #3 and ground is pin #7 on the 25 pin
port. 25 pin #2 goes to Atari #4 (XMT to RCV), 25 pin
#3 goes to #3 on Atari (RCV to XMT) and #5 of 850 goes
to #7 of 25 pin (GND to GND).

The right hand pin on the 'long' side of a female 'D'
connector is #1. There are 13 holes on this 'long'
side, 12 holes on the 'short' side. The numbers go
to the left 1 to 13 then #14 is under #1 and left again
so that #25 is under #13.

Most term programs allow a null connection, without a
carrier detect. Notably, '850 Express!' does not. I have
only used 'Procomm 2.4.3' (the last shareware version of
Procomm) on the PC and BobTerm on the Atari, but other
term programs may work.

To check your null modem connection, start both PC and Atari term programs, set baud to 2400 or 4800 on both computers. No parity, 8 data bits, 1 stop bit on the PC. Be sure to use the correct COM port on the PC. Go to 'terminal' mode and you should now be able to type on either computer and see it on the other screen. To accomplish a file transfer, use Y-modem probably from BobTerm, rather than X-modem. X-modem will often append bytes to a file transfer, an undesirable event. There is also a very nice Z-modem recieve program for the Atari, called ATAR-Z-MODEM by Larry Black for the Atari.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors (Radio Shack) some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modems and plugging in the null modem cable into the two modem cables. This also avoids the confusion of variations in the computer ports. Most computers connect into the modem end via a standard RS232 DB25 connection. With this both ends 25 pin cable, you would cross pins 2 and 3 and connect the #7s together to make a null modem cable.

The SIO port on the Atari cannot be used directly. An 850, P:R: Connection, MIO, Black Box or similar device that provides an RS232 port must be used.

Following are pin assignments for a DB25 pin RS 232 C port.
1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

For higher speed connections, above 4800 or 9600, you need the flow control lines and Atari term software that has flow control built in. You also need an MIO or Black Box, which uses the PBI (parallel bus). A high speed cable would need not only XMT, RCV, and GND, but also flow control lines. I suggest a commercial null modem from computer store to ensure correct lines. A null modem is a small adapter with the correct lines already crossed. I don't know how to correctly connect the CTS, RTS, DTR, DSR, CRX lines for a high speed null modem. With a null modem, you just plug it into the 25 pin connectors of the two modem cables you might already have connected to your Atari and PC or Mac. You may need

a straight thru 25 pin gender changer also.

Following is in this FAQ elsewhere, but I summarize here:
(Figure out or look for pin numbers on the ports.) Note
that these are pin assignments, and NOT null modem
connections with the XMT, RCV crossed and GND straight
thru.

Atari 8-bit PC AT 25 PC AT 9 pin
----
1. DTR 20 4*
2. CRX 8 1*
3. XMT 2 3
4. RCV 3 2*
5. GND 7 5
6. DSR 6 6
7. RTS 4 7
8. CTS 5 8
9. No connect? shield RI
22 RI

Note: * above indicates the difference between an AT 9 pin
and a Atari 8-bit 9 pin cable connector. eg. If you check
continuity from pin 3 of 25 pin end and it goes to pin
4 of nine pin end, you have an Atari serial cable. If pin
3 of 25 pin goes to pin 2 of 9 pin end, you have a PC
serial cable.
(updated 3/1/99)
(DTE = Data Terminal Equipment ie. your computer.
DCE = Data Communications Equipment ie. your modem.)

Subject: 10.6) How can my Atari use my PC's HD using SIO2PC or Atari810?

SIO2PC
======
From the SIO2PC home page, written by Nick Kennedy:

SIO2PC is a hardware & software package interfacing the 8-bit Atari to PC
compatible computers.

The original idea was to have the PC emulate Atari disk drives so Atari
programs could be stored on the PC's hard (or floppy) drives. It turned out to
be quite successful. About 95% of my work was in the software, but a hardware
device to convert logic levels was also necessary. This device is now commonly
referred to as an SIO2PC cable.

Features:
- Emulates 1 to 4 Atari disk drives
- Store your Atari files on PC hard or floppy drives
- Boot from the PC, real drive not needed to start-up
- No software or drivers required for the Atari;

no conflicts: use your favorite DOS
- Twice as fast as an Atari 810 drive and more reliable
- Co-exists with real drives in the Atari daisy chain
- Compatible down to the hardware level: use sector copiers, etc.
- Print-Thru captures Atari print-out and routes to PC's printer
- Convert Atari files to PC files and vice versa
- 1050-2-PC version connects PC directly to Atari disk drive

Nick Kennedy
http://www.cswnet.com/~nkennedy/

Another source for building SIO2PC cables is Clarence Dyson's page at
http://www.wolfpup.net/atari/atari.html

Atari810
========
Atari810 1.4d, by Dan Vernon, is a disk drive emulator in the tradition of
SIO2PC, for the Windows NT/2000/XP platform
http://retrobits.net/

Subject: 10.7) How can my Atari use my PC's HD, printer and modem using APE?

David A. Paterson writes:

"Steven J. Tucker took SIO2PC one better and wrote new software.
The Atari Peripheral Emulator (APE for short):

- lets your PC act as high-speed drives.
- It lets you print to your PC printer.
- And it lets you use your PC modem on the 8-bit."

http://www.atarimax.com/

Subject: 10.8) How can I connect my 1050 to my PC with the APE ProSystem?

The APE ProSystem goes beyond APE. The ProSystem has two components:

- The program PROSYS.EXE is used to create the protected and unprotected
disk images which are then used by APE.

- The ProSystem hardware is a cable designed to allow direct connection
of a stock 1050 disk drive directly to a PC's serial port for use by the
PROSYS.EXE software.

http://www.atarimax.com/

Subject: 10.9) What about interoperating with the Apple Macintosh?

Mark L. Simonson keeps a nice set of web pages which he calls "Mac/Atari
Fusion: Atari 8-bit Resources for Mac Users." Please visit:

http://www2.bitstream.net/~marksim/atarimac/

Subject: 10.10) Are there 8-bit Atari tools for the Commodore Amiga?

'551conv', freeware by Achim Hartel:
Converts a real Atari-800-disk, .xfd-image or .atr-image into a real Atari-800-disk, .xfd-image, .atr-image or extracts the files of the disk (-image). All 4 formats of the XF551-station supported: Single, Medium, Double, Quad. Version 1.03.

Subject: 11.1) How did Atari get its name?

Graham Thornton types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are theirs, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong.

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 11.2) What is the History of Atari?

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor.

1979
Atari files with the USPTO for a patent for a "Data processing system with programmable graphics generator" (the 400/800 computer system) on January 8, 1979. Inventors listed:
Mayer, Steven T. (Auburn, CA);
Miner, Jay G. (Sunnyvale, CA);
Neubauer, Douglas G. (Santa Clara, CA);
Decuir, Joseph C. (Mountain View, CA)

The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand-built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirement had been met.

The first "real" consumer units were shipped in Nov. of '79 and were 400s to Sears followed very shortly by 800s."

All Atari computers are tested at the factory by a master computer called the Atari Sentinel System.

1981
From Atari Connection magazine:
"At the National Computer Conference in Chicago on May 5, 1981 Atari announced that the 8K Atari 400 was being discontinued and that the price on the 16K version was being reduced to $399."

The USPTO grants U.S. Patent 4,296,476 to Atari on October 20, 1981 for the 400/800 computer system. Read the full text of the patent here:
http://makeashorterlink.com/?M2561456

November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL.

1984
Warner Communications sells the Consumer Electronics and Home Computer divisions of Atari Inc. to Tramel Technology on Monday, July 2.

Atari Corporation is formed by Tramel Technology and its products marketed under the Atari brand.

{ Warner sells the AtariTel division of the former Atari Inc. to Mitsubishi Electric, and the former AtariTel becomes Luma Telecom.

A complete line of cutting-edge telecommunications products had been under development at AtariTel since 1981, but no products had been released under Atari.

However, the Atari Videophone was nearly completed, and the product eventually surfaced as the Mitsubishi Luma Video Phone, aka Luma-Phone, aka LumaPhone. "The Visual Telephone"

Mitsubishi has since shut down Luma.
}
(
Warner also initially retains the arcade division of the former Atari Inc., and renames it Atari Games Corporation. Soon thereafter, Atari Games is a private, independent entity, though Warner remains a major investor.

Atari Games inherits Atari copyrights/trademarks/patents for use in the coin-operated arcade video game market.

1987
Atari Games creates the Tengen label for the purpose of marketing games for home game systems (potentially competing directly with Atari Corp.)

1993
Atari Games is (re-)purchased by Time Warner.

1994
Time Warner consolidates Atari Games into Time Warner Interactive. Use of both the Atari Games and the Tengen brands are discontinued.

1996
On March 29, 1996 WMS Industries (Williams, Bally and Midway) completes its purchase of Time Warner Interactive. Upon the sale, Time Warner Interactive adopts the Atari Games name and logo, and Atari Games is made a division of Midway Games.

1998
In April of 1998 WMS spins off to shareholders its entire stake of Midway Games, making Midway Games essentially an independent entity. Atari Games remains a division of Midway Games.

1999
Atari Games releases San Francisco Rush 2049. This turns out to be the last coin-operated arcade game sporting the Atari Games name and logo.

January 2000: Atari Games is renamed Midway Games West, and games produced by the group will sport the Midway Games brand.

June 22, 2001: Midway Games announces it is exiting the coin-operated arcade video game market; its game development efforts will now be focused

on games for home game platforms. The Midway Games West division lives on, developing games for home systems for Midway Games.

February 7, 2003: Midway Games shuts down their Midway Games West division.
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985.

According to Atari Explorer magazine, the 130XE was engineered by Jose Valdes.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system.

1992
Atari (US) officially dropped all remaining support of their 8-bit computer line on January 1, 1992. (Some 800XE's were still being manufactured in China in 1992.)

1996
On July 31, 1996, in a "reverse merger," Atari Corp. purchased JTS, with the new parent company taking the JTS name while Atari was immediately designated a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which was a subsidiary of Hasbro, Inc., for $5 million in cash.

(JTS filed for Chapter 11 Bankruptcy Protection on December 11, 1998, and then converted it to Chapter 7 on February 28, 1999)

Hasbro Interactive produced games for several platforms, including PCs running MS-Windows. Some of Hasbro Interactive's games, including several re-makes of classic Atari titles, were marketed under the Atari Interactive name and logo. Atari Interactive was termed "a Hasbro Affiliate."

Games produced by "Atari" under Hasbro ownership included:
Atari Arcade Hits 1 & 2, Breakout, Centipede, Missile Command,
Nerf ArenaBlast, Pong, Q*Bert, The Next Tetris, Atari Greatest Hits

2001
On January 29, 2001 Infogrames Entertainment announced completion of its acquisition of Hasbro Interactive from Hasbro, renaming the subsidiary "Infogrames Interactive." The purchase included the Atari titles and intellectual properties (known at Hasbro as "Atari Interactive").

Between 2001 and 2003 Infogrames placed the Atari brand on some of its "premiere" gaming titles.

2003
Beginning May 7, 2003 Infogrames Entertainment adopts the Atari brand and registered trademark for all operations, effectively changing the name of the entire company to Atari.

Additionally, the Company's wholly-owned subsidiary, Infogrames Interactive, Inc., which develops many of the game derived from the Hasbro line of board games, changes its name to Atari Interactive, Inc.

TODAY = http://www.atari.com/

Infogrames Entertainment
========================
Founded in 1983 by Bruno Bonnell and Christophe Sapet, Infogrames Entertainment SA today has more than 1,800 employees worldwide (approximately 60% in Europe and 40% in the U.S.). A publicly traded company, Infogrames Entertainment SA (Euronext: 5257) is one of the top five publishers of interactive entertainment software in the world and is widely regarded for developing and distributing quality games for the mass entertainment audience.

Infogrames SA comprises two main subsidiaries: 1) the U.S. based, publicly traded Atari, Inc. (Nasdaq: ATAR); and 2) Atari Europe, which represents the Company's original operations. Atari, Inc. includes the former GT Interactive; Atari, Inc. also manages Atari Interactive, Inc. (the former Hasbro Interactive) on behalf of its parent company.

1288. Re: Backing Up Cassettes to Disk

Newsgroup: comp.sys.atari.8bit
Date: 2004-03-16 14:04:41 UTC
From: hsklein@sbcglobal.net
Message-ID: <f3395824.0403160604.7f31bb74@posting.google.com>
Source record: 16495

I meant Casdisk in my original message, not Casdup. I'm trying to
back up some commercial cassette tapes such as Cosmic Pirate and Joe
Blade II. My original 410 recorder began to eat tapes. I bought a
1010 recorder on eBay which didn't work and finally got another
working one. I would like to back up a number of cassettes to disk as
I don't think the old Atari program recorders are as reliable or as
durable as disk drives.

boost the speed of the 835? It would be impossible unless you
employed some type of software compression on the computer side but it
would not be compatible with anything. The 835 was only 300 baud,
infact I remember "upgrading" to 1030 modem because it supported touch
tone dialing, so the 835 could only dial the phone like one of those
old fashioned dial telephones!

I would think it would be fairly simple to transplant a external 56k
modem into the 835 case if you wanted to. I have seen micro ATX
motherboards set up inside Atari 800 cases so anything is possible.
You will need a modem that is aprox the same size or smaller than the
835 and a dremel tool.

I purchased one. Most useful as an easy way to interface your Atari video
output to a standard s-video connector.

Also reduces cable clutter, is solidly built, and just looks cool. :)

John,

The program is probably in written in Basic. Have you tried all the loading methods mentioned in the Atari FAQ?

see Subject: 3.3) How do I run a program from cassette?
http://www.faqs.org/faqs/atari-8-bit/faq/

I had Air Traffic Controller from Creative Computing (a long time ago) that I had the same problem with. I think that I had to use LOAD "C:". Good luck.

The XE mario bros was excellent. Unfortunately there isn't any known
copy
circurlating the internet. Though, check out Jindroush's page for a
title
screen shot. I'd love to get my hands on the rom some day. There is
a good
XE crystal castles version too that plays much better than the 5200
version.
Well worth a play.

The original Pitfall! is in the new game in emulated form. Pitfall II is
also included. You have to find/earn them, but you are later given a code to
play them from the main menu at any time. There is also a code to make
Pitfall Harry look like his original self, but in 3D (in other words, a
bunch of colored blocks).

And, as long as we're on a similar subject, you can unlock and play the
Prince of Persia and Price of Persia II computer games in the new Prince of
Persia: Sands of Time game on Xbox or PS2.

If you mean a USA PSU that supplies the same 5V power, then yes.

> How about the PAL problem?
> Are there any ways of dealing (converters..etc) with that?

You need a TV that can display PAL.

Toshiba tellies are often dual standard video circuitry.

E.g. my Toshiba TV has a tuner that listens to the UK broadcast bands but it
can display baseband video from PAL or NTSC signals.

You might find one in the US that has a tuner for USA bands, and shows both
video.

Short of hacking around inside your 800, there is no convenient way to do
it.

The easiest way might be to buy a multi-system TV in Europe, or an NTSC
800XL in Canada or the US, unless you had made some expensive modifications
to your XL (if you did, you probably wouldn't have just a cassette player
for storage).

> How about my games and programs ? Will they run ? Are they "PAL version" ?

I think most games will work. This question should be in the Atari 8-bit
FAQ, which I haven't read lately.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

1309. Don't Forget PhillyClassic This Weekend

Newsgroup: comp.sys.atari.8bit
Date: 2004-03-18 11:08:24 UTC
From: Daniel Miller <daclmi@mediakingx.com>
Message-ID: <3k0j50lcb6a75l5bdfej021rdptnssvsnj@4ax.com>
Source record: 16516

There's a monstrously large retro-gaming convention this weekend in
Pennsylvania, USA. I printed the webpages of featured guests and
events and there were like 11 pages of classic gaming stuff.

You can get all the details, check out http://www.phillyclassic.com.
Hopefully we'll get some Atari 8bitters there!

1310. Re: Atari PAL ---> NTSC question

Newsgroup: comp.sys.atari.8bit
Date: 2004-03-18 15:24:39 UTC
From: Russ Gilbert <russg@en.com>
Message-ID: <105jfgnkrs1g4e0@corp.supernews.com>
Source record: 16517

Uhm.
TVs don't display so good.
Maybe you could get a used composite monitor.
Then, maybe it would work, get a NTSC Antic chip.
It works the other way around, for software, putting a PAL Antic in a NTSC machine to run PAL software, with a few monitor vertical hold adjustments.
Dunno.

FYI to anyone who is intersted, I have talked with IDG (which owns the rights
to Kilobaud MicroComputing, Hot CoCo, inCider, RUN, and PC Jr. World)
and they are not willing to let any of those magazines be archived online.

As for Compute magazine, www.atarimagazines.com has permission for that
and is actively working on getting it online. We will have something to
show for it soon.

1312. BBS the Atari Inside problems (fixed?)

Newsgroup: comp.sys.atari.8bit
Date: 2004-03-18 19:14:27 UTC
From: Marius Diepenhorst <grover25@zonnet.nl>
Message-ID: <c3csoc$eh4$1@reader08.wxs.nl>
Source record: 16519

Hi!

For those who tried to connect the BBS last week on port 8888. I'm sorry there was a problem, I couldn't recognize local. The problem is 'fixed' ... but now port 8887 is down. This is no problem, because the atascii emulation works now on 8888 too.

So bbs the atari inside is only available now at:

telnet://213.10.217.144:8888

Btw. There is some 'ghost-bug' (can't find) in the setup now... sometimes the bbs hangs completely after someone logs off. I don't know yet what that problem is... I try to find it!

Marius

> and they are not willing to let any of those magazines be archived online.

The rights to RUN magazine was sold off to Creative Micro Designs.
They started up Commodore World at about the same time. They also
acquired the ReRUN disks and other disks from RUN.

Later on, CMD sold off the subscription base of Commodore World to
GO64 magazine but not the rights to the content or articles in
previous issues. The rights to the articles in RUN magazine and
Commodore World magazine have been given to each of the individual
authors of those articles.

So, for anyone to publish an article from RUN magazine or Commodore
World magazine, it is possible provided permission is given from the
original author of the article in question.

As for the ReRun disks, those cannot be provided for free downloading
anywhere as they are still available for sale through Click Here
Software Co. CHS obtained all the original masters for the ReRUN
disks and manuals and is able to produce them. This also includes all of
the other disks that RUN magazine made available such as RUN Productivity
Pack, GamePack, RUNWorks, etc.

> afaik Freddy "drives" or controls the Gate Array Chip (or something like
> that). No Freddy, no Gate Array control and thus no separate antic
> access... At least thats what I have been told... greetings, Andreas.

Freddy just replaces other chips. These other chips can control the Gate
Array just as well, since the signals comming from them should be the same
as those coming from Freddy (otherwise ATARI screwed up the Freddy design).

Howdy folks

Could somebody please tell me how the Atari uses it's memory?

I'm using MyDOS and TurboBASIC and am running into memory problems. I can't find enough free memory.

And why can I use $3000 as a buffer? Is it in the middle of free memory? At the moment I'm using graphics 0.

By the way, if you wanna check the directories on a data CDROM and are able to run TurboBASIC give me a holler. I'm far from ready, but I can no longer update my site in Germany so I can't upload new test versions.

Another more complicated way is to use a PGP signed signature. Try
alt.security for more info on this, they've been discussing it for about a
month now.

Howdy, Mathy.
It sounds like you're setting a buffer, using TurboBASIC, just setting an address, ie. poke ($3000, but in decimal),number.
That's not a way to do, and yes $3000 is in an area that BASIC uses.
What I do for a buffer is DIM a string, after getting a FRE(0).
say
X=FRE(0)
X=X-1000 (don't use all of it)
then DIM BUF$(X).
This is a dynamic DIM, and will give a smaller buffer as your program grows.
You could easily see how much room you have for your buffer, just ? X.
There are other ways to reserve memory. I think POKE 106,PEEK(106)-(some big number/256). That Might reserve memory under the DL and screen memory.
You'd have to find out where the DL is, I think it comes before screen memory. You can't step on the DL.
There are some small page 0 places you can use for ML routines that require page zero. The cassette buffer, I think. And, if I recall, $CB to $CD is available for indirect addressing.
Russg

I think what you want to do is 'munge' the from address in your newsgroup posts. Do 'Tools', accounts, news, properties and 'munge' the from address. If you look at my 'from' address, you'll see what I did. This will greatly reduce the spam, including SWEN and others that have viruses, that take addresses from USENET posts.

If you are not handy soldering...I make two 850 adapters for regular DB25 cables..one for rs232 port and one for printer port..

One guy I knew had a CP/M BBS system, "Black Box", with an ATR8000 and an 850(probably modified). Four phone lines in, and one rs232 port for him to log in locally. AFAICR.

Hi Mathy,
you don't need an extra driver vor TB. The only problem is, that you can't load TB from the 80column-screen (the strat-screen of TB does not use normal CIO). So you have to load TB from 40column-screen and then switch to 80column. A description and solution to this can be found on the ***XEP80 Info discs*** , which are in the ABBUC - PD.

Hope this helps.

Well,
someone told me that Freddy does more (or has more power) than the older
(non-Freddy) MMU chips on Atari. So, it would not be possible to drive
or control the Gate Array without Freddy (meaning with the older MMU
chips). Not sure if this is true... -Andreas.

Hmmm,
think ABBUC has some disks in their PD library for the XEP80, think one of them contained drivers for Bibo-DOS, another one for TB XL... Do not know the PD number right now. Visit the download section of ABBUC and simply search for that... -Andreas.

I believe there was an PAL/NTSC hack out there to make an NTSC 8bit run
PAL software. I think it had a modified rom and used a switch to toggle
between pal and ntsc. This project could work on a pal machine I think.
That is if you're up to a hardware hack. You will need to burn a new
rom on a 27128 eprom. There are usually places that will do that for
you for a fee. Check around on the net you may find a good solution there.

When I bought my 400 back in the early 80's, I paid about $400 for it. Still works and I have since upgraded the keyboard and the memory to a wopping 48k. Last one I saw for sale sold for about $20. I knew it was a bargin when I saw that pricetag.

Dan -

Thank you SO MUCH for that post!
I had no idea that the "Philly Classic" was in town. I live about 20
minutes away from the convention center in valley forge.
If I missed that, living so close, I'd be kicking myself!!
Hell - up until a few years ago, I lived right down the street from the
convention center.....usually go to regular "PC conventions".

How come I never heard of that? I never even saw signs around here?

Again, many thanks.

-rob [aka Z.Beeblebrox]

p.s. is your name daniel miller or are you just a big fan of the movie,
"defending your life" ?

OK - Here's my unofficial report:

It was pretty cool!!!

It was like stepping back into the 1980's & going to a computer/game convention back then.
They covered all of the old and/or obscure systems (atari, nintendo, intellivision, coleco, etc). But the main focus seemed to be Atari.
Coming in second was probably nintendo. Lots of bins and racks of old systems, parts, games, etc.

Much heavier on the Atari 2600 collection than the atari computer stuff (800/XL series, etc).
I don't think I saw any Atari computer games....some systems & parts. As I said, mostly the video-game systems.

I really enjoyed the 60-or-so actual 1980s stand-up arcade stations they had there. It didn't cost any $ to play. No quarter needed!
I found some old classics I used to dominate!! and of course, now they could beat me...

They also had a section with the latest & greatest NEW stuff.....but I didn't pay the modern junk any attention.

alright, that's it from me.

From: Wilheim <guillermo@mail.cl>
Message-ID: <c3l0hvtth1@news1.nivel5.cl>
Source record: 16555

Hi, everybody!

I have the following question: I'm trying to dump the complete memory of a game. I made it using the "save state" option that Atari800Win PLus 4.0 gave me. But I cannot recognize any byte the file has in iit with my hex editor. Maybe its compressed, encrypted, I really don't know. So, does anyone have an idea to how to make a dump of the memory in the emulator so I can read it in my hex editor??

TIA,

W.

You can also use the debugger (F8). The command is:

write xxxx yyyy filename.ext

where x and y's are your hex address range.
You can also inspect the memory using the command:

m xxxx

;) Mark

Greetings,

(1) Has anyone done Bob Woolley's video mod for the 1200XL from the
following page?
http://www.geocities.com/atarimods/1200xl-vm.html

(2) Has anyone done the OS mod located here? This one is real simple but
sounds like a good idea.
http://www.atarimuseum.com/computers/8BITS/1200xl/1200OSMOD.html

Just wondering if anyone has had success with these before I start. Thanks a
lot.

Ralph

1354. Here's a very good Cross-Assembler

Newsgroup: comp.sys.atari.8bit
Date: 2004-03-24 03:55:57 UTC
From: sales@cdadapter.com
Message-ID: <1aecd72d.0403231955.5b777f90@posting.google.com>
Source record: 16561

Cross-32, The universal Meta-Assembler, has been a programmers favorite
for over a decade. It's table based structure allows you to modify or
add new processor instructions. You can even create your own instruction
set. Over 50 processor tables are included. CD-ROM contains both Windows
and MS-DOS versions.

Previously sold for $199, now retails for $99.

Get yours now, on eBay, for a lot less !

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=1251&item=3668501739

1355. FF: Seikosha GP-100 dot-matrix printer, SF Bay Area

Newsgroup: comp.sys.atari.8bit
Date: 2004-03-24 06:48:43 UTC
From: kml@bayarea.net
Message-ID: <1062bqbi4dnhn33@corp.supernews.com>
Source record: 16562

I have a Seikosha GP-100 dot-matrix printer which was never particularly wonderful, but at least featured a direct daisy chain SIO connection to the Atari, without requiring the separate parallel printer module. I just moved, and there is no more room to store this beast. It is in the original (battered) box; I'm not sure if it works, as I haven't setup my Atari stuff in a number of years. It certainly worked when I packed it away.

I hate to just throw it away, after toting it around for 10 years; I'd prefer to give it to someone who can use it. I'm not willing to ship it (I don't want to absorb extra costs and worry about money), but I'm willing to deliver to somewhere in the San Francisco Bay area, or have someone pick it up from me in San Francisco or Santa Clara.

If I don't hear anything by April, out it goes to the trash.

Thanks,

Kevin

If you want Atari 8 bit stuff, I suggest going to the Classic Gaming
expo in San Jose, CA. The past few years its been in Vegas, but this
year it moves to CA to accomodate more of the vintage computer/console
gaming legends that live there. I went last year and had a blast. They
have a pretty good amount of Atari 8 bit stuff, including boxed/sealed
games and plenty of systems. The website is www.cgexpo.com

Actually Bod did the mod for me himself after he saw the video output
from my 1200XL at a SLACC meeting.

Not that specific one, but several others. Check your mother board for
the ROM chips positions. IIRC all 1200XL mother boards have two 24 pin
ROMs in either 28 pin sockets or 24 pin sockets soldered into 28 pin holes.

The 28 pin holes make it easy to do several modifications of the OS
because you can use a 27128 EPROM to replace the 24 pin devices with
minimal gymnastics. After market OS like Omnimon or Omniview, custom,
800XL, burn your own, dual OS, etcetera are all options.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Here is a recent auction for one of the most rare VIC-20 games ever;
"Ultima: Escape from Mt. Drash", which is known to exist only in two
or three complete sets plus a few loose tapes:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3084975541

Yes, the _winning_ bid was US $3605, so not too far away from
the proposed Buy It Now-prices on the Atari games. I don't know
if either of the Atari titles are as rare and desirable though.

Thanks, this is the tip I used. And I added a tag in which is describe how to get to the real address. In a way that even smart spambots (if they exist) should have trouble with, but real people should have no problem solving.

Did you use a fake name that looks like real. I mean like
word@anotherword.extender. My guess is that Netscape checks for the AT sign
and the DOT sign in the part behind the AT sign.

Howdy folks

I've posted my CD-ROM data reader om alt.binaries.atari.d
It's far from finished. There is still a bug in it and you can only look at directories.
I hope to killl the bug soon.
After that I'll see if I can find some free memory.

CU Mathy van Nisselroy

PS you need a BlackBox and TurboBASIC.

They are $19.00 and you have to purchase the 8 drams. If you don't have
them they are $1.00 a piece.

HI!
I have been reading past Atari 8-Bit Cartridge Lists and noticed that ever since at least 1992 the CBS Electronics video games "Blue Print", "Satan's Hollow", "Madden's Football", etc have been listed as never released but planned. I was wondering where the original reference to these games comes from as I would love to read more about them if at all possible. Just thought it would be neat to find where they came from and around the time they were announced. Thanks for any help!

Sincerely,

Bryan Roppolo

FWIW, Satan's Hollow is now available on cartridge from Video 61.

I bought one fairly recently; it's quite good!

How many of these were produced/distributed by Atari?

I'm aware of eight of these, basically from 1982/83. Were any more produced?

Thanks for the message. I'll have to do just that as I've seen some
reviews/screen shots of Satan's Hollow on other systems and also the
original arcade and have been inticed ever since!

I saw the Ultma Vic-20 game and it is quite rare. Several bidders
wanted it and were willing to pay.

The Two Atari games, Motorodeo BIN $3,900 and Omega race BIN $1,500 just
ridiculous. They are not that rare and there is no way they will get
even close to those prices. The seller is living in a fantasy land.

Here is a complete in package Omega Race that just ended on eBay, it
sold for $16.50, not quite $1,999 is it? Granted $16.50 is cheap, it
should have sold for more but still not more than $50 to $100.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4315&item=308617650

The Motorodeo boxed, if PAL, is worth very little, maybe $20. If it is
NTSC it may be worth $200, a long way from $3,900.

Inside the 8-bit bbs is now online. It is running BBS Express
Professional with a few mod's a mux and two slaves at the moment.. I
am going to put two more slaves online.

You can setup a hyperterm session tcpip 216.78.136.26:8888 or 8889

I still have a bunch of code to write but it is running.

you would loose the fuction keys, ability to turn off os rom, and joystick 3
and 4 may have strange values in them. same with paddles 4-8.
also, the 2 leds won't work either.

James

Awesome - haven't been on a real 8-bit BBS since probably 1987 or so. I remember the thrill when I upgraded my XM301 to the all new SX212 (300 baud to 1200 baud). I still have all of my old Atari stuff, but the 1200 baud modem died long ago.

I'm pretty sure it was Suncom, but the pictures I thought I have aren't
on my hard drive, so I can't say for sure, or come up with the name.

I think though that there was a thread in the forums on either
AtariAge.com or DigitPress.com, if you wanted to try searching for it.

Just to let you know... his bbs is not the only real Atari bbs running! There several other Atari bbses on telnet too! Check this list out! (I don't know how accurate it is, but I think it's pretty current... however, some may not work or may frequently be down and so you may have to keep tryin'!)

Closer To Home - cth.dtdns.net (in my books... the best! a real superb and top-notch bbs and sysop (Tom Hunt) too! :-)
JYBOLAC Stargate - jybolac.dyndns.org:520
SPACE BBS - spacebbs.no-ip.com
R.A.C.E. - technoid.dyndns.org
APE - ape.penguinpowered.com
Boot Factory 2000 - bfbbs.dtdns.net
Enterprise Online - ntrprise.dhs.org
BBS Mousenet - atari-bbs.kicks-ass.net - website: http://bbs-atari.netjump.de/

Maybe everyone here can help and maybe we can post a more updated and accurate list here of the telnet bbses out there? If there is any inaccuracies or additions here, please post them! :-)

Source record: 16350

OK, thanks for the info!

As I said, I wasn't sure if that list was accurate? It was a bit out-of-date, I think... 2002?

I think there needs to be a new list compiled and posted here... I have worked on what I had and this is what I came up with so far....

Atari Telnet BBSes (running on a real Atari 8-bit!)

Closer To Home - cth.dtdns.net
Boot Factory 2000 - bfbbs.dtdns.net (an Orion BBS)
Inside Atari 8-bit - 216.78.136.26:8888 or 8889

Other Telnet BBSes (not running on an Atari 8-bit)

SPACE BBS - spacebbs.no-ip.com (not running on an Atari - a Synchronet BBS - supporting Atari?)
Enterprise Online - ntrprise.dhs.org (not running on an Atari - a Wildcat BBS - supporting Atari?)

Unknown -

BBS Mousenet - atari-bbs.kicks-ass.net - website: http://bbs-atari.netjump.de/ (problems connecting?)
APE - ape.penguinpowered.com (doesn't appear to be APE anymore? - comes up as FreeBSD - xxxxxx.darkbluesea.com - requiring a login)
JYBOLAC Stargate - jybolac.dyndns.org:520 (doesn't exist anymore or currently down?)
R.A.C.E. - technoid.dyndns.org (doesn't exist anymore or currently down?)

If it's using an Atari 8-bit, then I consider it being Atari 8-bit based... whether it's using a PC gateway or not! :-)

As I said, there probably are some additions or changes that were needed to this list! :-)

Thanks for your info and contribution!!

Well, if I am not mistaken? I think CTH BBS can still operate if or when there is no pc gateway running? Meaning that callers still can reach his bbs via modem if they cannot reach it by telnet(pc)?

Closer to Home and Boot Factory both use an atari 8bit EMULATOR!

They do NOT run on real equipment.

They do a good job ofcourse, don't understand me wrong! But they are not running on real equipment.

Well, if I am not mistaken? I think CTH BBS can still operate if or when there is no pc gateway running? Meaning that callers still can reach his bbs via modem if they cannot reach it by telnet(pc)?

Hi Iain,

Actually, I have exactly what you're talking about sitting beside me
(ironically).

It's called PQ: The Party Quiz Game by Suncom. It comes with four
controllers with orange buttons marked 1 to 4. The disk featured both
C-64 and Atari versions.

The picture on the box features it connected to an Apple IIc.

Nothing rare - just looking for a good price on the following:

One-on-One (XE)
Pengo
Tennis

New or used, doesn't matter if they're in good condition. If anyone
happens to have these and is looking to get rid of them, give me a yell.

thanks

ADV:More Than Games..A/V break out boxes and BJL
02 Apr 2004:
Just a refresher on the 4 new products I make:
http://www.a8maestro.com/sites/mtgcat/mtgcat.htm.

For the Atari 8 bit computers:
an audio/video breakout box using the monitor jack($25.00):
http://www.a8maestro.com/sites/mtgcat/proda8/eh0101.htm.

For the Atari Jaguar game system:
an audio/video breakout box using the video connector($30.00):
http://www.a8maestro.com/sites/mtgcat/prodgame/gj0001.htm.
the parts kit and instructions on a pc/st/ste/falcon game transfer
system($20.00):
http://www.a8maestro.com/sites/mtgcat/prodgame/gj0003.htm.
the adapter to connect the computer to the jaguar($12.00):
http://www.a8maestro.com/sites/mtgcat/prodgame/gj0002.htm.

These 4 adverts are pictures about 150K in size each.

For inquiries and questions email mtg2004 at a8maestro.com
(mtg2005 in 2005)

Payment is check, money order, cash, or paypal in extreme circumstances.

Thanks,

Rick D.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

1412. playable Videos on Atari XL...

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-02 17:08:28 UTC
From: Andreas Magenheimer <magea000@students.uni-mainz.de>
Message-ID: <406D9E0C.72DAC90C@students.uni-mainz.de>
Source record: 16369

Well,
for many months (if not years) we had discussions here, if realtime videos are possible on the A8 or not. Ok, I have found a webpage with some huge converted videos, though they are not in the original format, but still great looking... URL: http://mr-atari.com/docs/
Download the ATR and ZIP files and view/test them on your Atari emulator - or if you have a real A8, copy them to your harddisk (most if not all of these videos require more than 4 Megabytes free space) and try them out... not sure, what will happen, if you view the videos via a slow floppy I/O connection (19,2000 Baud or such), maybe the videos are extremely slow then, maybe they will even crash... you have to find out yourself... anyway - enjoy ! -Andreas.

P.S.: The videos should work fine with any A8 harddisk connection (My-IDE, Black Box, etc.)... not sure what happens on the emulator...

it's funny you should bring this up. I lost track of the atari 8bit
world in the early 90's when I moved on to the Amiga, but recently
realised that while the 8bit was pretty much dead in the US over in
europe they kept going. I recently tried out some demo's from the
early 90's and some of them really blew me away. One was a full
motion video of a guy walking down the street and another one had
realtime 3d generated first person perspective anim (like wolfenstein)
it's amazing what can be squeezed out of the 1970's technology!

Well, if I am not mistaken? I think CTH BBS can still operate if or when there is no pc gateway running? Meaning that callers still can reach his bbs via modem if they cannot reach it by telnet(pc)?

1415. looking for dead 1050's or working complete drive mechs

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-03 10:41:49 UTC
From: carmel_andrews@hotmail.com
Message-ID: <6912483e.0404030241.4346365f@posting.google.com>
Source record: 16372

I am looking for a couple of dead 1050's (and at least 1 psu) the 1050's must come complete with working drive mechs and the onboard cable jumpers that attach to the 1050 motherboard (incl. the j9/j10 track assembly) alternatively, 2 complete working drive mechs (see above) 1050 type only

I am willing to pay 15.00 gbp for the 2 drive mechs or 20.00 gbp for the 2 dead 1050s

This is so i can get my lazer/usd and super archiver drives up and running again

1416. cruncher 5 (magnus) and super packer 1.0 (bewe soft) and bin. files

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-03 10:57:55 UTC
From: carmel_andrews@hotmail.com
Message-ID: <6912483e.0404030257.36503e70@posting.google.com>
Source record: 16373

I am using cruncher 5 and superpacker 1.0 to pack my game binary files
that i created using omnimon/ultimon, howfen dos and superdos 5.0

I notice that both cruncher 5 and superpacker whilst excellent at what
they do, I noticed a couple of limitations

cruncher 5 can only pack files with a start addr. of $C00h, and i am
reliably informed that it cant pack files that use the d301/bank
switch techniques, and also it cant pack file that have init addr. you
have to modify the file with an editor and change 2e0/e1 to 2e2/3

Superpacker 1.0 can pack very lomem files (as low as $480h) however
using most dos's (mainly superdos/spartados) you can only pack files
of up to $7a00/7f00 bytes in lenght

Is there a binary file packer, with the capabilities of cruncher 5 and
superpacker, that can pack files over 255 sectors and pack files with
a low load addr. like 0480h or 0600h

Additionally, is there a program that will convert super
packer/cruncher 5 packed binary files back to boot tape (for
conversion to boot menu like rob c/howfendos), the ones that i have
fail miserably because of the complex file structure of
superpacker/cruncher 5 packed files

Also is there a utility out there that converts trandisk 4 files to
howfendos, or a utility like cruncher 5/suyperpacker for packing
howfendos or transdisc 45 files

any help is greatly apprec..

Just wanted to let everyone know that I connected to this BBS and it was fantastic. Stephen even jumped in and chatted with me. Talk about a surreal experience. It was like stepping back 15 years.

Also I wanted to point out that he is running this BBS on a true 8bit. No emulation here folks. And the telnet works GREAT! Definitely give it a shot and post some messages. If we don't support it who will?

Source record: 16384

Look at :

http://cgi6.ebay.de/ws/eBayISAPI.dll?ViewSellersOtherItems&userid=klassische-konsolen&sort=2&page=4&rows=25&since=-1&showpics=1&stab=0

All the games are boxed, new, most ATARI 2600 games are PAL, but some NTSC, too.

ATARI XEGS carts are NTSC, but also PAL compatible.

Very cheap "buy it now" prices for boxed games with instructions, many are new and factory-sealed.

I can ship worldwide, please aks for shipping (depends on final weight).

1428. Newbie 800XL questions

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-06 05:10:27 UTC
From: Christopher Drum <nobody@nothing.zero>
Message-ID: <nobody-FB3BCD.22102705042004@comcast.ash.giganews.com>
Source record: 16385

Just picked up my first 8-bit Atari computer, an 800XL with floppy drive. Two questions I hope someone can help me with...

1) The floppy drive did not come with a cable to hook it up to the computer. How difficult is it to replace this?

2) The video-out seems to use the same 5-pin DIN connector as a C-64. However, the pinout seems to be diffferent. Can someone help me with hooking my system to the RCA or S-Video jacks on my television? Might there be, perchance, a single cable that can be used (with some cable shuffling) with both the C-64 AND the Atari 800XL?

Thanks in advance for any help anyone can offer!
Christopher

>The floppy drive did not come with a cable to hook it up to the computer. <

Widely available "SIO cable" -- about $5 on eBay or a little more from Atari
sellers.

>The video-out seems to use the same 5-pin DIN connector as a C-64. <

This requires a longer answer with your options. Google for
"Welcome to comp.sys.atari.8bit"
This points to an *excellent* FAQs that is well-catagorized and should answer
most of your questions.

I remember this being the case, but I could be wrong.

> Can someone help me with hooking my system to the RCA or S-Video
> jacks on my television? Might there be, perchance, a single cable
> that can be used (with some cable shuffling) with both the C-64 AND
> the Atari 800XL?

Yes. The DIN-to-RCA cables are the same if you can find one. You'll
just have to find the composite video and audio lines among the RCA
plugs. Or you could make an S-Video cable yourself, if you're at all
handy with a soldering iron or have crimp tools available.

If you are good with a soldering iron, you may want to do the "Super
Video" video amplifier upgrade for the 800XL for a clearer, sharper
S-Video image. Google.

1434. Is my 800XL dead already?

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-07 04:52:47 UTC
From: Christopher Drum <nobody@nothing.zero>
Message-ID: <nobody-329C0A.21524706042004@comcast.ash.giganews.com>
Source record: 16391

I posted yesterday about the pin-out on the monitor plug for the 800XL. So, today I plug it in noting that the C64 and Atari800XL both use the same pin-out for composite video and audio out. BINGO! I shouted, and plugged it all in and got nothing on screen. Just blackness. Switched to the RF plug and the SAME THING happens... just blackness. I've only ever turned this computer on one time before and it worked fine, if perhaps a little touchy on the semicolon key. Could my new baby be dead ALREADY?

Is this a known or common problem with this system, as time goes on? Any suggestions for something to look at as far as fixing it? It's getting power, because the power light is on. I guess it's trying to send SOME kind of signal to the TV, because I don't get static there, just absolute perfect blackness.

Help! Any suggestions?

Christopher

1438. XEP80 Overscan?

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-07 13:37:55 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040407093755.09718.00000668@mb-m24.aol.com>
Source record: 16395

The vertical overscan of the XEP80 continues be an unresolved issue (with me, at least). The best I can do is 23-1/2 lines. The 25th line is a Status Line, so it might or might not be too important.

I have read a number of articles about the XEP, and most mention the overscan issue, but that's as far as they go. Has anyone ever run across any "fix" for this?

Is there some way to alter its vertical scan rate that would result in the vertical field being "scrunched" down? Or perhaps altering the character set to steal one vertical pixel per line? The characters are quite tall, anyway. Or perhaps making the screen scroll after the 23rd line, instead of the 24th? I'm no whiz at assembler, but I did look through the XEP source code, and couldn't figure out how to get it to scroll earlier. (?)

Larry

1439. Does anyone know how good the 820 print quality is?

I've used those din type cables before and I actually had to swap the wires around for sounds and video to get it to work right. In other words, the colors didn't match on the cable to what they went to on the monitor/screen.

Hmmm,
a full-motion video with a guy walking down the street ?!? Think I do
not know this video - ar was it the Bill-Pie-Demo ?!? You know, that
kind of movie (also availablefor Amiga, ST and PC I guess) which was
ripped from the tv, where Bill Gates gets a pie/cake thrown into his
face... If you mean a different demo let me know. Maybe I really do not
have your mentioned fdemo in my collection...

Regarding the two movies, I tested both movie-demos on my real atari
(via SIO2PC, since my floppy disks were not big enough). the 16MB demo
did not work at all (no Directory under MyDOS or Sparta, when booted it
gave a "Boot Error" message). Therefore the 1,2 MB demo (featuring the
Yars Revenge advert) worked fine. Allthough I did not use a harddisk, I
could load the Yars Revenge movie from floppy disk image (extremely
slow) and from Ramdisk (very fast, but also very short, since I merly
have a 512kbyte Ramdisk)... greetings, Andreas.

1444. Re: cruncher 5 (magnus) and super packer 1.0 (bewe soft) and bin. files

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-07 19:30:30 UTC
From: Andreas Magenheimer <magea000@students.uni-mainz.de>
Message-ID: <407456D6.973CDEA1@students.uni-mainz.de>
Source record: 16401

Well,
about Atari XL packers, I normally dislike to give away info, just to avoid that everyone packs his Atari programs. But alright, there are dozens of good and not so good Atari XL/XE packers out there. So lets start a long info-part here...:

1) A packer that is very similar to the Magnus Cruncher is the "Code Cruncher 3.0" (or Code3 Cruncher) by Adam Bienias. It also packs programs with init adresses - but it requires a minimum of 128k RAM and quite some patience. First you have to load in the program, then choose a packing sequence (ranging from 1-9, alas nowhere is explained what that means) and when packing is done (you see a rainbow screen), reload the program and then choose the linker to link the packed data. For me the packing sequences or keys 3, 4 and 5 worked best. You should know, that while packing a program the packer requires extra RAM / Ramdisk (not sure if the program itself has a RD driver, I always use the DOS RD driver). But when re-loading the program to link the packed data one must not (!) format the RD or use a RD driver again, otherwise the packed data will be lost... This packer can pack very big files. Alas, sometimes the packed program does not work and thus one has to test all 9 packing sequences/possibilities which can be quite annoying and time-connsuming...

2) Another good and very fast packer for short files without init adresses is the Flash PAcker by tight. It packs programs with a length of up to 30-31 kbytes. For the packed data you have to use some normally unused memory space (e.g. if the program uses memory 2000-5fff, then you can use 6000-BFFF for the packed program). The fine thing about this program is, that it packs very fast and it uses only one data (+ one init) segment, even if the original program had had dozens of segments. As said before, it does not like init adresses or programs that are longer than 31kbytes. but if the program has only one init adress, remove it first and save it separately. finally append it again to the packed program...
You can also use adresses in the lowmem/DOS area (0700-1E00), if you want the program to work with a Gamedos only...

3) Powerpacker and Packer+Linker by Thorsten Karwoth: These 2 packers can be found on the Macro-Assembler 4.32 and 2.1 disks (both assemblers and packers are programed by T.K.). They can pack programs with a length of up to 36-37kbytes and also accept init adresses. They pack very fast, alas the packing efficiency is extremely low (the worst of all the packers I use). Thus, I do not use them very often. They always load the whole program with all segments, so programs longer than 36-37kbytes will fail... These packers always use page 4 for depacking...

4) Fast Packer 1.0: The fastest packer of all (and only the 2nd worst; yep, the packing efficiency is better than with Powerpacker and Packer-Linker). It uses page 4 for depacking and it loads + packs/depacks single segments, thus the whole program can have almost any length. The program can also split segments that are longer than 32kbytes and still make them work/depack fine (it uses memory area C0-CF for splitted segments). So, I often use it to split big programs and/or programs with big segments into smaller programs/segments. Meaning, if a program is too big for the Superpacker or the DJ-Packer, I use the Fastpacker first to shorten the program and then use the Superpacker or DJ-Packer to get a better packing rate... As said before, the packer is very fast, but not very good in packing...

5) DJ-Packer: Along with the Code3-Cruncher, one of the best - if not the best packer. two versions exist: One that uses Pages 1+4 for de/packing (I call it DJ14Pack) and one that uses pages 5+6 for de/packing (I call it DJ56Pack). Both packers have the same packing rate, their only difference is the memory area used for de/packing. The DJ packer loads single segments of a program, thus the whole program can be very long (but on the other hand, every single segments gets packed/depacked). Alas, no segment should be longer than approx. 36kbytes, otherwise the DJ-Packer will crash (try to use the Fastpacker and then the DJ56packer). The DJ assumes you are having two drives or 1 drive + Ramdisk. Simply load/start the packer from a drive *other than drive 1*. Insert your program disk into drive 1 and it will read and display the directory. Chosse a file to pack and press return. The packer uses the same disk for the packed file, so make sure, there is enough room for both the unpacked and the packed file. It packs programs with RUN and Init adresses, but the depacker area is fixed. So if a program already uses page 4, you have to use the DJ56packer; if a program uses page 4 and 6 (or ...), both packers will fail...

6) Superpacker 1.0: A good DOS program packer by Bewesoft. It packs a whole program (with all segments) with a length of up to 30kbytes and max. 64 segments. It does not allow any program to use the DOS area (0700-1E00),so only DOS compatible programs (with RUN and/or Init adresses) can be packed here. Therefore one can choose the packing method(s), as well as the depacking area and other nice things...

Well, these are the most common packers I use. I have not tested any packers under SpartaDOS, but I am quite sure most of them will not work there. the same is true for all those *ugly* (here in Germany absolutely uncommon) british menus, like Multiboot, Jon C., Elton C., Rob W., Howfen-DOS, transdisk 4 / 5, alphaload and such. thats because most of these menus have their directories located elsewhere. One would have to patch the packers, so they can read a directory of these british menus... Anyway, if you are interested in any of the mentioned packers, simply send me an e-mail (amp#abbuc*de). I also have lots of old archiver programs (arc/unarc, shrink, mash, squish, etc.) and some "newer" ones (like UNLZH and UNZIP)... greetings, Andreas.

Well,
if you want to convert packed programs to boot tape you mostly have to unpack them again. Only some packers can be used for boot tape programs also (like the Flashpacker by Tight and probably others)... Alas, I do not know of any de-packing or unpacking utility yet, meaning you have to unpack the packed programs by hand and then save them again in the unpacked version (e.g. try to remove the RUN or Init adress of the program, so it cannot start after depacking, then save the depacked program; since I am not a programmer nor a hacker, I do not know how to find the original *unpacked* program start+end adresses)... anyway, good luck, you will need it !! -Andreas.

Well,
there were actually two clubs. One came from Abbuc and thats where to find their disks - in the ABBUC PD library. The other club came from Luebeck and their disks are not available at ABBUC yet. But: Luckily I have "all" their disks in my collection (they use german language of course). Alas, the disks from the guys from Luebeck used medium/enhanced density and I got some of these disks in Single density (the original owner also had them only in SD). Thus there are quite some files/programs missing there... Anyway, e-mail me if you are interested in these disks... -Andreas.

well the full motion was the same video from a famous amiga eurodemo
by a group called fairlight where a kid is walking down the street and
trippy things are flashing on the screen meanwhile he walks into a
store and walks up to a monitor that says 242 (the name of the demo)
that is if Im remembering it right. The demo on the 8bit is just a
like 10 seconds of the kid walking down the street with no sound
(still pretty impressive on the 8bit).

Hi John-

Here is a link with a small picture (the link to the larger photo appears to be broken) note -- two line link:
http://www.atarimuseum.com/computers/8BITS/400800/820/820.html

There are many great photos of Atari items at the Atari Historical Society:
http://www.atari-history.com/

I *may* still have an 820 in my garage. If you are interested in it for the shipping expense, *email* me. I have not used it in years. It is similar in size to an 810 drive, but definitely taller.

The print quality is just OK. It is 40 columns, and pretty noisy.

Larry

I am new to this message board. I am trying to find a copy of a game that I used to play on my Atari 1200XL. I am not certain of the name, but I think it was something similar to "American Adventure". It came on a 5.25" floppy and the object of the game was to go from state to state on the map and correctly put the states in order by their entrance into the union. The game came in a plastic fold case and had a picture of Mount Rushmore on the front. Anybody have any thoughts as to what this game might actually be called and where I could find it? I have been to http://www.fatmangames.com and browsed the list of games for the 8-bit Atari's, but none of them ring a bell. Thanks,

Well, I soaked the ink roller with stap pad ink, prior to turning
on and witnessing the demise of the print wheel. So, I suspect,
the ink roller is not much of an issue.

It would be reall cool, if someone did persue making a mold using
a good print wheel, and could create new ones. I've never done
anything like that, nor do I have a good print wheel to use as
a casting sample.

I think its carbonized rubber, do you realize the stink that would make?
Your neighbors would think you were running a meth-lab!

> so it might or might not be too important.

After you asked me this in an email you got me thinking. Have you tried looking for "vertical height" on your monitor? On my monitors I have to adjust this when I go from XEP80 to non-XEP80 or vice versa.

Hi,

Turbo Basic was published as a data-type-in-listing in a German magazine,
the way Compute! for example published their machine language programs.

I have never seen the source anywhere.

On account of Gfa-basic, I seem to remember that both languages were
designed (and probably implemented) by someone called Frank Ostrowski
(sp?).

I have used both languages in the past, and both were a remarkable
improvement over the BASIC's that Atari published. When I switched
over from the XL to the ST I quickly picked up Gfa, partially because
of the similarities between that and TB.

I had a disassembly of Turbo Basic in those days, but as I couldn't
program in machine language then I lost track of it in the twenty-
something years in between.

Just my $0.02.

Regards,
Wef

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

I made a modification to the compiler and runtime package to allow a compiled program to be placed at a specific address. This could be done in the non-compiled form in a program (to load machine language routines lower in memory than the tokenized Basic program code). With the minor modification to the compiler it would allow placing the compiled code at a specific address. The modification to the runtime would make it sensitive to whether the compiled program had a custom load address or not and act accordingly.

I don't know about fixing any "bugs" though.

Not sure if it's the game you are talking about, but there is
United States Adventure by Jerry White, (c) 1984 First Star Software. 1
SD floppy.

It's available for download at http://www.atarimania.com

I have this Atari 400 with b-key keyboard and 48k ram. I've had it for 25 years and it sort of holds a nostalgic place in my heart. I was thinking if I could hack it some way so that output was something better than RF then attach a SIO cable I could use it to play a couple old games once in while. Anyone know of a good hack/upgrade for the video output of the A400???

Hi Mathy-

Thanks for the suggestion, but I use a "flat panel" display, and I've not seen one with a vertical height adjustments.

I also have to use a "up-convertor" to allow composite/S-video on the VGA display, and I think any adjustment would have to be done inside it. I will ask the mfg. if there is any adjustment that can be made.

Larry

IIRC, Analog published an article on adding a monitor output in one of their fairly-early issues. The video section of a 400 is (nearly) the same as an 800 -- looked pretty easy to pull off the lines to get composite and S- video (again, from memory -- 20 years+.)

Hmm. There's one bug I remember, namely that a ^U at the end of the line in a PRINT command caused the basic to ignore the following linefeed improberly. And I also remember that this was the result of using the old Rev A Atari BASIC kernel for TurboBasic which had the same bug. I also remember something about the flood fill method, but I don't know what. Yes, I've version here that fixes these, though not in source. I rather "hacked" these in.

Every other known bugs? Sorry, that's just too long ago for me.

So long,
Thomas

Are there any 6502 Cross-Dis-Assemblers out there ? Wonder if one
could be used to "reverse" engineer it or dis-assemble it or hack it
some how ? someone has to have the source code don't they ? of
course thats just me rambling off with the mouth. :-)

It would be mildly interesting of course.

But to what end? I mean to look at the source code for educational purposes?

My take on it is even with the source code there aren't but a handful of people around that could understand it and modify it. Big question is: What would it need to be modified for? The original was relatively bug free and easy to use. Even if was improved/modified, I don't think there has been a lot of turbo basic programs that have come out in the last 5 years or so.

Iwould like to find this issue. Lately I have been thinking about
those early days and looking at my frankenstein 400 and wondering how
to upgrade the video. I've always wanted to get a 1200xl and do some
modding on that beast too, that is my all time favorite 8bit.

Thanx for the info, I know all the antics are online, but I dont think
the analogs are, if noone else knows, maybe I can get someone to scan
that article.

I've not touched TB in at least 10. :-)

but it'd be interesting to say the least just to look at the source code (if
not modify for esp. emulators to to take full advantage of 256k+ systems?)

1479. FS/FT : Large qts. of XEGS carts, new & boxed

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-13 06:11:54 UTC
From: webmaster@klassische-videospiele.de
Message-ID: <d0c5424f.0404122211.50553a0f@posting.google.com>
Source record: 16436

Hi,

I still have many boxed+new ATARI 800 XL/XE cartridges which I want to sell or trade.

The games are NTSC versions with English instructions.The games work on PAL machines, too, although Lode Runner & Midnight Magic will be without colors on PAL machines (no artifacting on PAL systems).

I have :

Archon (picture : www.vectrex.de/c/archon.jpg)
Ballblazer (picture : www.vectrex.de/c/ballblaz.jpg)
Crossbow (picture : www.vectrex.de/c/crossbow.jpg)
Final Legacy (picture : www.vectrex.de/c/finleg.jpg)
Gato (picture : www.vectrex.de/c/gato.jpg)
Hardball (picture : www.vectrex.de/c/hardball.jpg)
Joust (picture : www.vectrex.de/c/joust.jpg)
Millipede (picture : www.vectrex.de/c/millikl.jpg)
One on One Basketball (picture : www.vectrex.de/c/oneonone.jpg)
Pole Position (picture : www.vectrex.de/c/polexl.jpg)
Star Raiders 2 (picture : www.vectrex.de/c/starrai2.jpg)
Tennis (picture : www.vectrex.de/c/tennisxl.jpg)
Thunderfox (picture : www.vectrex.de/c/tfox.jpg)

and Mickey in the Great Outdoors on disk (picture : www.vectrex.de/c/mickey.jpg)

All these games are new and boxed and sealed.

I may sell the games or trade for ATARI 2600/7800, ATARI 400/800 XL/XE, ATARI ST, AMIGA, C64, Genesis, SNES, MS DOS PC, Windows PC, Odyssey 2, ATARI Lynx, ATARI Jaguar, Colecovision, Intellivision ... games.

Iï¿½m in Germany, Europe and some games that may be common in the USA, Canada or Australie will be interesting for me, because some games were not released in Europe.So you may send lists, I may trade boxed games 1:1 and used games 1 new : 2 used if the games are common.

I have many copies of "Gato", this is a 128K cartridge, should be interesting for homebrewers who want to modify existing XEGS carts and put new games on them.

I also sell these XEGS/XL cartridges , but no large qts. available :

Ace of Aces (picture : www.vectrex.de/c/aceofaces.jpg)
Airball (picture : www.vectrex.de/c/airball.jpg)

Crime Buster (picture : www.vectrex.de/c/crimebu.jpg)
Davidï¿½s Midnight Magic (picture : www.vectrex.de/c/davidmm.jpg)
Desert Falcon (picture : www.vectrex.de/c/desertxl.jpg)

> in others, and downright impossible to figure out in other areas. He uses
> every trick in the book to squeeze out all available speed. Of course if
> that is what you interested in, it's a gold mine! ;-)

It's a gold mine in incompatibility. There's also a GFA basic for the
Amiga which I bought ages ago, mainly because of the author's good
reputation and because I knew Turbo Basic. GFA had a big couple of
incompatiblities, broke almost every good programming style (self
modifying code, for example, won't work on 68030 and up) and was
almost unaware of any good programming practise and Os usage of the
Amiga Os. I ended up writing page-long bug reports and phoning to
GFA, and I ended up fixing the bugs myself so GFA would be at least
half-usable. Sooner or later, I gave up and learned C.

So long,
Thomas

Greetings all,

From May I will be working on the publication Retro Gamer as a staff writer and my first job will be to write the news pages. I've already penned in some of the new games (and other such software) that is underway as we speak. I've been asked to cover emulation and remakes as well, something that until recently I have not spent too much time on, so anyway if you have any news you think would be relevant for Retro Gamer (Remakes, emulation or whatever) please don't hesitate to email me. Of course, I'll be looking at good sites such as raww.org, atariage.com and these news groups.

Cheers,

Shaun.

Hi,

I've emailed you and still I have no answer at all.
perhaps you could upload those disks in some free webhosting.

cheers,

German

I don't know what the rules are as far as posting ebay auctions, but if you do a search for Atari 1027, you'll find there is an auction going on right now that includes one. This is for a 130XE, hard drive, printer, etc. - but it would seem to indicate that they do show up on ebay.

I had a 1027 back in the early 80's - it was nice, but the alignment was off, and I ended up getting something that interfaced to an Olivetti typewriter.

UPDATES SINCE PREVIOUS POSTING
2004.03.31 Computer Games Plus updated
2004.03.31 Dale Wooster entry deleted (thanks Mario Robbins)
2004.03.27 added Sascha Springer, developer of A8E emulator for MS-Win
2004.03.27 Introduction section updated with new info on IRCs
2004.03.24 Video Game Advantage entry deleted (thanks Paul)
2004.03.24 added Pixels Past
2004.03.16 Classic Video Games deleted (at vendor request)
2004.03.13 added VintageFunWorld.Com
2004.02.27 Radek Sterba update, Raster Music Tracker (RMT) 1.16
2004.02.19 added The Atari Times
2004.02.19 Classic Video Games udpated (personal name deleted as requested)
2004.02.08 Mirage added
2004.02.07 Video Magic updated, name changed/moved to Classic Video Games

------------------------------

Subject: Introduction
```

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

No email addresses are listed due to spam consequences.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no
guarantees. Information of this nature constantly ages; therefore, the
information contained in this list is constantly updated. Please use the
latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to
send me updates that correct errors that you find. If you use this
list, please do your part in keeping it useful for everyone!

Hi,

Yeh, they come and on ebay. There is no telling what condition
they will be in after trying to print a few pages!

It seems the design has a flaw, concerning deterioration of the
print wheel. Both of mine became soft, mushy, and pieces are
distributed inside of printer assembly.

Hiya,

Actually, when I put the link up, I was thinking along the lines of
"Hmmm, this could be a source of an original head if someone wanted to
try to make a mold." - since buying the whole package for one print wheel
seemed out of the question.

1491. Atari Classics Disk Numbering

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-15 04:14:47 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040415001447.15359.00000355@mb-m02.aol.com>
Source record: 16298

Wow! I've been a subscriber to AC for over 10 years! ;-)

In my disk set, the 4th disk issued was for Volume 2 No.6 *and*
Volume 3 No.1

Then, the next disk that I have is Volume 3 No.3 *and*
Volume 4 No.1

Was there a Volume 3 No.2 ? I did find a magazine for Volume 3 No.2, but no
disk. Was there a disk, or an anomaly in the disk numbering?

Thanks,
Larry

I've searched quite a bit for the instructions for Scram and haven't been
able to turn up anything. I did find some old postings from Larry
Richardson about it being posted to his site, but the site seems to be dead.

Any pointers?

thanks,
~brian

Yesterday I was working in one of those beach communities they have in new england where there are cottages lots of restaraunts etc... I went to a Dairy Queen fast food rest for lunch and it was like walking into a timewarp. In the back "dining area" was a mini arcade that had games from the 80's golden era and there was even Genesis playing on their radio... anyway, I inserted a quarter and played MS. PAC MAN for the first time in years. I forgot how fun this game is. It's amazing how the old abstract videogames can make you zone out for a few minutes unlike many of todays games that require you to emmerse yourself into another world for hours.

So when I came home I decided to play MS. PAC MAN on my PC. I downloaded a copy for all the different emulators (except mame, which I didnt have time to set up) so I played sega master system, nintendo, genesis, snes and of course atari 800 version which I grew up playing. The Genesis version seems the best, it has some cool features and the graphics are done well, but there is something about the 800 version that sets it apart. It is fast as hell! The atari version is by far the most challenging version. Somehow they got it right on this system, despite the blocky graphics. I think there is something to be said about the gamplay of many of these old games. It's like a blind person will develope better hearing well the 8bits were limited in gfx/sound so a good game required a big fun factor and creativity.

One thing I noticed is that every ms. pac man aside from the 8bit version had a vertical scrolling screen to perserve the aspect of the arcade game. The atari had hardware scrolling right? Did that include horiz and vert? Would it have been possible with all the AI/sprites/etc.. in MS PAC to maintain the speed and still incorporate verticle scrolling (I think I remember jr. pac which had horiz scrolling)

The folks at AtariArchives.org are proud to announce that the full text and source code from the book SpeedScript ♦ The Word Processor for Atari Computers is now available online.

Published in 1985, the book includes the complete, commented assembly language source code for the popular Atari word processor, as well as instructions for using the program. You can also download the source (ready to assemble in Mac/65) and ready-to-run binary for use on your Atari or an emulator.

You can read the book and download the program from
http://www.atariarchives.org/speedscript/

AtariArchives.org is always looking for volunteers. If you would like to help make classic computing books available online, contact us at
http://www.atariarchives.org/contact/

Oh well you'd love the company I work at. In our front lobby/office we have
an original Ms. Pacman (1981) , Galaxian, NeoGeo with Metal Slug2 loaded,
and an Adams Family Pinball. They break down often but always repaired
promptly. 8-)
As for the 80's music, everyone I've talked to in my age group agrees that
the 80's were the peak of pop music. Down here in Houston, we have an all
80's channel 106.9 -nothing but the 80's. 8-)

1510. Pooldisk Too?

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-17 01:48:17 UTC
From: spaz@wiltecinc.com
Message-ID: <16a5f0f.0404161748.614779d6@posting.google.com>
Source record: 16317

Does anyone know if it is still possible to purchase/download the Pooldisk Too CD-ROMs? Searching on google has led to very old information, or more recent posts (only 2-3 years old) of people also looking but without any responses.

So far I have been unsuccessful making contact with Ernest Schreurs (to the e-mail address on the list 5-6 years old). Other attempts to get more information on how to get a copy, such as from www.atarimax.com who has the CD-ROMs on-line, have gone unanswered. Perhaps they are no longer in business?

Any help would be very appreciated! Thanks,

- Tom

ANTIC VOL. 3, NO. 1 / APRIL 1984 / PAGE 67

LITTLE BROTHER GROWS UP

An audio/visual output mod for the 400
by DICK SLAVENS and JIM LEE

SYNOPSIS
This article explains how to adapt an Atari 400 for audio and video output. The project involves wiring and building a circuit board, so you should be faily experienced with electronics before undertaking it.

If you've installed 48K and a good keyboard in you Atari 400, you know that it's as capable a computer as its big brother, the 800--with one exception. The 400 does not provide a DIN jack for audio and video output.

If you attach a high-quality color monitor to your 400, this will improve its graphics so much that you'll practically be able to "see the whites of your enemy's eyes." Similarly, if you connect the 400's audio output to a stereo, you'll be able to hear the "crash thunder" as you destroy him. This article explains how to accomplish both of these goals for $20 and a few hours of work with a soldering gun.

http://www.atarimagazines.com/v3n1/littlebrother.html

ANTIC VOL. 3, NO. 3 / JULY 1984 / PAGE 8

HELP! [Column]

RESISTOR TROUBLE

There are several errors in the list of resistors on page 68 of "Little Brother Grows Up" (Antic, April 1984), which describes how to add monitor and audio output to an Atari 400. However, the labels for the resistors in Figure 2, the schematic on page 106 are correct as published.

I have not posted a message here for some time, but I am still lurking
here. Also, I always answer E-mail messages. The address to use for
asking me any questions is ernest@wxs.nl and my old one also still
works, and I have another one that also ends up in the same mail box,
and all three of them are known to all these dreaded spammers, so I am
getting all the spam messages three times. Just now I retrieved my
mail and got 550 messages, yours being the only one not spam.
And I retrieved my mail yesterday too.
So bear with me if I do not respond, it probably means your message
was accidentally mistaken as spam. Anyone sending me mail please make
sure your subject line mentions Atari or other stuff that will make me
know this is not just one of these spam messages.

About the Pooldisk Too, occasionally someone orders one, and we do
still send these around the world from time to time. Regular Pooldisk
Too is still $20 and a cheap spindle CD-R version is $5, priority mail
one dollar extra, anyone interested mail me for details. Bo suggested
we should create a DVD version maybe, but we simply do not have
sufficient new material for a third Pooldisk. Like if someone could
give us a few hundred megs of new stuf, then maybe. But there is just
not that much new stuff available. Also, things have changed since
1995/1998, and more people have broadband Internet access these days,
and CD-writers are standard issue with PC nowadays. We paid $2000 for
our writer and we were dialing into the Internet at 28K8 in those
days. Anyone that has the files can write a CD-R with most of this
fun stuff for a few dollars now. There are some files on the Pooldisk
that are not freely distributable. Like the Mapping the Atari stuff.
Some of that is available on other websites legally now. Anyway, we

cannot allow people to make verbatim copies of the Pooldisks.
Whatever shareware etc. is on it can be copied freely as per the usual rules for that of course, so if Steve still has them online, feel free to download from that site, burn them onto a CD-R or whatever. We expressly reserve the right to the name Pooldisk though, so anyone selling stuff on CD calling it Pooldisk is abusing this name, unless they are selling their own original Pooldisks they bought from us or Abbuc.

About our websites, we have little time for stuff like this and other hobbies since our mother past away in 2000. She did the shipping back then, but most importantly, she provided the enviroment in which we had te time to do things like this. Unfortunately, this is now all different. And not only this. Anyway, the information is still valid. The information in the vendors/developers list is accurate. If I missed your previous messages or anyone elses mesages I apologize. I can only say that I hope that someone will make these individuals responsible for all the spam read spam themselves for eternity when their time comes.

Keep those XL's/XE's humming.
Ernest.

Call for an Impeachment Inquiry of Bush and Cheney,
Get Congress to Take Action

Sign our online Petition and read below for more information:

http://www.votenader.org/get_involved/impeach.php

HEY DUDE WHERE'S MY BUDDY!!!???
COME BACK HOME MICHAEL!!!

Ok Michael, you've had your realpolitik fling with ex-General Wesley Clark. Your endorsed Presidential candidate in the Democratic Primaries has withdrawn. It is time for you to come home, to join your buddies and resume your only genuine role which is that of defiance and resistance. Compliance and assistance with the Democrats does not accord with your past, your character, your bold writings and, most memorably, your long corrosive assaults on the Party that betrayed the working classes and plunged our country into corporate globalization. Remember, Michael, you're the flinty man from Flint, Michigan. You've never forgotten your roots. The heady Hollywood, Manhattan scene with the celebrities and Academy Awards have never gotten to your head but rather have gotten into your deserving pockets. How we all recall your standing before one billion people in Los Angeles at the televised Academy Awards in 2003 and, breaking the customary cant of the awardees, throwing the gauntlet down to George W. Bush and his "fictitious" war mongering.

Now the War has become a quagmire, with both Republicans and Democrats complicit (check the votes in Congress). The Draft may be on the way. So what are you doing going on the Al Franken Show very nearly breaking down when Al Gore (he of the pro NAFTA/GATT, anti-worker, regime-change, Iraq-bombing, lethal sanctions on half a million children Administration) called and thought you were apologizing. You have nothing to apologize for, Michael. Gore has a lot to apologize for-blowing the election he won in Florida and the country as a whole and for blowing, with Bill Clinton, the many opportunities the rich-booming Nineties and the collapse of the Soviet Union gave this country to turn a peace dividend into a pro-worker, pro-environment, pro-consumer and anti-poverty resurgence.

Come back and join our Presidential campaign, Michael. Talk to those "Reagan Democrats"-those 35% of union members who still vote Republican and against their own interests-as only you can. Michael, if you go pumping for the Democratic Party this year, just what are you going to say to the unemployed steelworkers near Sparrows Point in Maryland? To

the megathousands of laid off textile and furniture workers in North and South Carolina? To the abandoned auto workers waiting and waiting near their empty factories that went to repressive countries? To the millions of blue-collar workers, who fought our wars, only to learn that the two parties won't fight for their company pensions and health insurance? Are you going to tell them how the Democratic Party pushed through the WTO, let their pensions erode or disappear, were too busy collecting checks from the corporate bosses to pay attention to the corporate crime wave that looted and drained trillions of dollars from millions of workers, their retirement and small investments? Will you tell them that the cowardly Democrats, who couldn't win the fewer elections they are now not losing without the labor vote, won't even mount a determined drive to repeal the notorious, union-blocking Taft Hartley Act?

How can you be free to be what you are, or to depress Bush's vote, to jolt into consciousness the moribund Democratic Party?

Hey Dude, join your real buddies! The ones you may be thinking about just don't fit either your message, your vision, or our website VoteNader.org.

Come back home Michael. The workers and the youth of America are looking for you.

Best regards,
Ralph Nader

P.S. Will you put this invitation on your website and see how your fans react to Michael Moore returning to the Nader 2004 presidential campaign? Patti Smith will reserve a big singing spot, for you, on the stage for the customary finale, PEOPLE HAVE THE POWER.

Wednesday April 14, 2004

Join the Call for an Impeachment Inquiry of Bush and Cheney
Help us Get Congress to Take Action

You can help the call for an impeachment inquiry of President Bush and Vice President Dick Cheney. Sign our online Petition.

http://www.votenader.org/get_involved/impeach.php

George W. Bush and Dick Cheney should be impeached for two reasons:

They led the United States into an illegal, unconstitutional war in Iraq.
They misled the Congress and the American people with five falsehoods that led to war.

All it takes is one Member of the House of Representatives to call for an Impeachment Inquiry to start the process to investigate the two grounds. If the House then votes by a simple majority for Articles of Impeachment, the Senate would then undertake a trial of the President and Vice President. They would only be convicted, and impeached, if two-thirds of the Senate agrees.

I thought I would pass on a contraption I put together over the last few weeks. I call it the Vintage Gaming System v1.0. I took an ugly but functional TV stand and turned it into an ugly but functional Vintage Gaming System. Six computers presently reside in the VGS. They are the Commodore 64, Apple IIc, Tandy Color Computer 3, Atari 800XL, TI-99/4A and Commodore Amiga 2000. I decided to put the system together after getting tired of the hassle of setting up a system to tinker with. The VGS lets me get one of the 6 systems up and running in just seconds. Flip a switch or two on the power strip, select the video signal and turn on the monitor, pretty simple. It's on wheels so I can keep it one step ahead of my wife's wrath. Check it out and let me know what you think. Any ideas for the VGS v2.0?

Here it is:

Source record: 16326

Hi Folks,

I am looking to buy a good Happy 1050 Disk Drive for an Atari 8-Bit.
Must be in very good working condition. I'd prefer one with the CONTROLLER
option installed, but it
isn't necessary as long as the Happy Drive works correctly.

Also, I am interested in Stock Atari 1050 Disk Drives, and 1050's with the
US Doubler installed.
These must be in very good working condition.

And a nice Stock Atari 800XL and 130XE with REV C. if possible. Must be
Clean and in good working order.
Upgraded 800XL's and 130XE's maybe considered.

Also in need of a SpartaDOS X Cartridge, would prefer version 4.19, but any
version would be good.

At the moment the above is what I'm most interested in, However I would
consider just about any type
of Atari 8-Bit Hardware. Hard to find items and common ones.

E-Mail a good description of your items with price to me at:
phantomm@bellsouth.net
I'm located in the USA

Thanks,
Phantom

If it works for you, great setup. I would set the Tandy Color computer 3 or
the Atari 800XL on top. Because the Coco3 has side loading game cartridges,
and the ones for the Atari are on top. As they are placed now, it's
difficult to reach in.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

I think its cool. I understand about the "one step ahead of the wife's wrath". I like the idea of all those systems in such a small area. Great way to demostrate to the kids/grandkids about the early systems and what they could do before they get hooked on the latest and greatest. Keep up the ideas!

Thanks for the comments. Each of the computers has enough slack in the
video, power and drive cables to allow pulling out the computer and placing
it on the top of the stand. I wanted to make sure I could get at the
keyboard and also plug in any accessories I felt like tinkering with.

Nice setup! But if I were you, I wouldn't keep that TI-99/4a on top of
the 1541, at least not when the drive is turned on. You risk killing
all the chips inside with the heat it generates.

>Russg
>

Thanks for the advice Russ.
However, I refuse to let these spammers take away my right to express
my views and opinions. I will not foil my E-mail address because of
these morons. Anyone that wants to respond to my message should be
able to do so without the need to do things imposed by those spammers.
All countries should make laws prohibiting spamming. Until that time,
we should all ignore them. The problem is that some folks actually do
respond to their spam and spend money on them, thereby making it
profitable. If they no longer make a profit, they will stop doing it.
Also, they already have my address, so there is no point in applying
any of these techniques. The pi.net address I have not used for years
on usenet. My provider changed their name before 2000. Still I am
getting spam on that domain name. Now they changed their name to
planet.nl and I never used that address myself. Still I am getting
spam on it. I certainly never posted with it on usenet. I am
assuming they guessed that E-mail address based on my home page
address. With most providers, the homepage name is the same as the
E-mail address, sort of. The pi.net, wxs.nl and planet.nl all result
in the same mailbox. If they want to spam me, well, so be it.
It is the price I pay for freedom of speech. My provider offers a
free spam filter, that I may have to activate.

Keep those XL's/XE's humming.
Ernest.

Very cool, I have something similar I've set up in my computer room. I'm glad I'm not alone in wanting to do something like this. Not sure if it will give you any ideas since yours seems pretty good to me. Is that Omega Race on the monitor? :)

Brian,

Yea, that's Omega Race. I have hundreds of games for the C64 but Omega Race
was the first and for a long time the only game I could afford while going
to college.

Speedscript was available for the C64 also, and it would *not*
surprise me if it was available for the Apple II and other 6502
computers. Back in the 1980's, I typed in Speedscript for the C64
in *hex*.

Yeah, I should have thought of something like that. Now, I just have some
tables with 3 computers on each. I have enough composite monitors now.
Before, I shared a TV with a TI-99/4A, C64, Atari 800, and a Timex Sinclair
1000, but things were a little too cramped.

For most users its not a big deal, But I use to run hard drives on my 8-bit
and when using SDX v 4.19, I could run certain programs
like First Excellent Word Processor and then exit back to the command
prompt. With some versions on SDX certain programs NOT ALL
will cause a lock up or system reset. Which isn't a big deal if your not
running a BBS or Hard Drive.
This lockup or reset problem occured with some programs that worked well on
a Hard Drive with SDX version 4.21 IIRC. And this
problem didn't occur with version 4.19. BTW, my hard drive was setup with
the Disk Based version of Sparta. I didn't have to use
the SDX cart. But there were some benefits that I personally enjoyed when
using it.

I ended up selling my SDX carts and some other 8-bit items. But kept my ICD
1meg MIO and hard drive stuff and tons of 8-bit
software. And would like to get some of these things back to enjoy again.
I guess you could say that I'm an Atari collector, I've have lots of Atari
ST,STE,FALCON hardware/software. But I've negelected the
8-bit for awhile and would like to get a nice 8-bit setup again.

Well,
if you want to buy the original CD-ROMs, you can do so at the
ABBUC-shop. Just visit www.abbuc.de and then enter the shop...
Otherwise, if you are only searching for the content of the Pooldisk
Too, there are several mirrors available (think I have seen one by CTH /
Tom Hunt)... greetings, Andreas.

Am I the only one having problems getting to this site? I cannot get DNS
to resolve it. If I do an nslookup and use a DNS server off of my site,
sometimes I get SERVFAIL (which is what I get with my DNS server) and
sometimes I get a response of the address 216.67.246.207, but if I try
putting this into my web browser, I get a page saying "There is no web site
configured at this address", and if I tack on the rest of the link after
the IP address, I get 404'd.

Re: Connecting to the Internet. You need:

a. A copy of OmniComm (for VT100 emulation and 80 columns)

b. At least a 2400bps modem and a modem interface (850,Rverter,P:R:
connection.)
c. Call 1.410.494.1199 (Baltimore Public Library Sailor program)
This number gives you a Linux shell,running Lynx.
This will enable you to connect to the web,using a text browser.
You then can surf,receive and send E-mails,and download files,
using the Kermit protocol.

I know that,for most people,this is a long distance call,but using
10-10-987,it is only 39ï¿½ a call and 3ï¿½ a minute.

(Want to see my phone bills from the early 80's? Around $250 a
month @ 300bps!)
This is the way I have used the Internet,with a 130XE,since 1993!

Good Luck!
Ed

1553. Castle Crisis [mini review, I guess!]

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-20 21:10:42 UTC
From: bill@newbreedsoftware.com
Message-ID: <mlghc.7257$Fo4.87978@typhoon.sonic.net>
Source record: 16210

So, I ordered a copy of Castle Crisis from AtariAge.com, and it arrived yesterday.

I must say, this is a VERY well-done game! It's pretty much Warlords, from the arcade! (My first knowledge of Warlords was from the Atari 2600. I thought it looked pretty, and seemed like a neat idea, but it wasn't until years later that I realized it was based on an arcade game. I have one of the Atari/Midway discs for my Playstation, and therefore now have an emulated version of the original.)

While I didn't exactly compare Castle Crisis side-by-side with the arcade Warlords (yet ;^)), I have to say that it's probably as close as you can get on the Atari 8-bit! It's got a dragon; it's got multiple fireballs flying around the screen; it's got reasonably difficult AI (they kicked my ass a few times); and, of course, it's a 4-player paddle game!

I'm quite impressed! Now... when're we gonna get an XL port of Adventure 2, the homebrew 5200 game, eh!?!?

newbreedsoftware.com/bill | All those disclaimers made me want to do it more!

1554. Stelladapter

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-20 21:15:21 UTC
From: bill@newbreedsoftware.com
Message-ID: <Jpghc.7258$Fo4.87811@typhoon.sonic.net>
Source record: 16211

Along with Castle Crisis, I bought a "Stelladapter" from AtariAge.com,
which also arrived yesterday. (It's an Atari 2600 controller -to-> USB
adapter.)

I tried it out VERY briefly. Unfortunately, I didn't have much luck with
it yet.

My setup was Atari800 under Windows XP (bleh!).

I tried my Sega Genesis controllers (my preferred controllers for Atari'ing
for the past 10 years :^)), and they didn't seem to work right.
I'm guessing the Stelladapter was kind of confused by it, so I need to try
it out with whatever /normal/ Atari joysticks I have hiding in the closet.

I then tried my paddles (had them out for Castle Crisis!), and they were
recognized and seemed to work right... except that Windows was obviously
reporting them as joystick axis, so Atari800 was reading them as STICK()
not PADDLE(). D'oh!

(That's probably something that we'll need to add as a configuration in
Atari800... e.g., "See analog joystick as a pair of paddles")

I have yet to try it out on my Linux box (never done USB joystick on it),
or try it with Stella. (I'm fairly sure the paddle issue won't occur
there, since Stella comes with instructions on making a device that reads
Atari paddles and gets read on the PC end as a joystick; a friend was
helping me put one together once upon a time, so I could get my
Kaboom! clone (Mad Bomber) and Circus Atari! clone (Circus Linux!)
working with REAL paddles under Linux and Windows :^))

I've tried this game (to be fair the demo) and while it looks nice compared to the 2600 version. I found it somewhat boring and the controls sluggish.

Try Galahad and the holy grail, the graphics are bit more spartan (although the character sprite is more defined than a cursor!) but it is far better and is the real Adventure game for the 8-bits.

1558. Master Memory Map for the Atari book online

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-21 02:18:18 UTC
From: Kevin Savetz <usenet-DELETEthisPART@savetz-DELETEthisPART.com>
Message-ID: <usenet-DELETEthisPART-BDA0D2.19181820042004@news.west.cox.net>
Source record: 16215

The full text of the book The Master Memory Map for the Atari is now available at AtariArchives.org.

Published in 1984 by Educational Software, the book is a thorough introduction to the Atari 8-bit's memory architecture. Beginning programmers can use it to learn the basics of PEEKs and POKEs. Advanced programmers can learn the purpose of hundreds of memory locations, and how to access the Atari's built-in ROM routines.

You can read the book at
http://www.atariarchives.org/mmm/

This is the 28th classic computing book to be made available at AtariArchives.org. We are always looking for volunteers. If you would like to help make classic computing books available online, contact us at http://www.atariarchives.org/contact/

Not necessarily. I use my 8bit 576k XE, serially connecting (via MUX, MIO, etc) to a Windows NT
server running a product called Seattle LABS Terminal Server. This in turn provides a telnet
based access to the 8bit to the Internet.

Works flawlessly - been using for years. I believe the product has been discontinued though,
but other simliar products I'm sure are available, including RS232->ethernet adapters (Lantronix, etc.)

No.For the sake of speed,I am using a PC,to read the Usegroup.
I used to connect to DejaNews,with the A8,to read the posts,but
I can't find dejanews.com any more.

I really think the fun of the Atari 8bit,at this time,will be
TelNetable BBSs.

I am retired and when I learn more, plan to set up a telnetable BBS
of my own. That being said,the combination I listed will get you
connected to the InterNet with the A8.
It blows people's minds to receive E-mail from an Atari 8bit computer!

Atari Forever!
Ed

I need something KINDA similar for my countless video game systems.
I'd like to bring one downstairs to play on the 'big TV' now and then,
but it's a pain to unhook a system and all its countless cables, and
then set it up downstairs.

I kind of need some modular hook-up that all my systems and 'plug into'
(as if the game system itself were a cartridge, of sorts ;^)).
I guess it'd be kind of like a laptop docking bay, except instead of
a laptop, I have an NES, SNES, Jaguar, Dreamcast, 2600, 800XL, etc. :^)

(The PS2 gets to be on the big TV cuz it doubles as a DVD player, and
looks kinda like a TV component to begin with ;^))

Hello,

I wanna try to build some adapter for connecting an Atari to a PC
(CGA or VGA) monitor, but I cannot find any schematics on
the Internet.

I have found some information about selling an adapter to a VGA
monitor but I have not found its schematics.

I have found the page

http://www.geocities.com/atarimods/8bit-ttl1.html

about interface to a TTL monitor, but there is only 1st page working and
schematics is placed on some other.

Author's (Bob Wooley) mail adress "atarimods@sog.com" does not work. And I
cannot find he's homepage. Does he live?

Can someone help me, please?

Vladimir Tichy, S.D.Q.

Howdy folks

I finally got my CD data reader for the 8 bit Atari to show me all of a directory. And it's quite fast since Freddy told me how to improve the speed of it. Unfortunately you can't copy a file to (hard)disk yet. If ytou want a copy, I can send the beta version to you.

CU Mathy van Nisselroy

PS you need TurboBASIC and (untill somebody write an ASPI manager for a different interface), a BlackBox.

I second that. In fact, it's replaced the 2600 version at parties. The rounds go so much faster, and I like the penalty you get when you are holding onto the fireball.

Run and pick up a copy today! (It's well worth $25, and this coming from a guy who balks at paying more then $20 for a Gamecube!)

Message-ID: <gTGhc.30466$G_.13312@nwrddc02.gnilink.net>
Source record: 16229

Has anyone been able to get both a Percom drive and a SIO2PC cable to work with an Atari system at the same time? I want to transfer all of my games and files to my PC, but when I plug both the Percom and the SIO2PC cable in at the same time the system won't boot. The system boots fine from each one separately, but I can't get them to play well together. From APE I can see the SIO requests coming in to APE through the SIO2PC cable, but if the Percom is in the daisy chain then neither the Percom nor APE respond to the boot requests.

Thanks for any help,

Jetware

Make sure APE is configured to not be a boot drive when the Percom is
connected. Otherwise it's like having two boot drives in the same chain, an
Atari no-no. :)

> Has anyone been able to get both a Percom drive and a SIO2PC cable to work with an Atari system at the same time? <

Yes -- it's running with APE as I write this. But there can be several things awry:

What model Percom do you have? The only Percom-specific issues I can think of is that you may have one that supports slave drives, and that setting is conflicting with APE. There is also a resistor pack that is required for the correct termination on the back of (some) Percoms. This could be an issue depending on where the Percom is in your chain. Both drives aren't assigned the same drive number at the same time, are they?

Like your issue, with my very first APE/SIO2PC cable, APE would not work at all when I had a real drive in the chain. That turned out to mainly be the interface design. I reworked the interface using a 14C89 (not a 1489) and adding at least one extra capacitor, and then things worked very well. If you bought an interface, that is likely not an issue. Keep the Daisy chain to a minimum of active devices.

How fast is your PC? If too fast, you may have to reset the "Safety Margin" depending on your version of APE. Are you using Win XP? That *might* be an issue. Do you have the transfer set at 1X (regular SIO speed)? Start there.

Have you tried keeping APE *shut down* (not just "asleep"), booting from the Percom, and then opening APE and assigning its drives? What happens?

Well, I'm out of ideas -- hopefully something here will help.

Thanks, that gives me hope, and some things to try. I'm using Windows XP on a 1 GHz Pentium III. The Percom is the model AT88-SPD, which supports slave drives. I am missing the resistor pack, so I'll start there.

Thanks again.

Jetware

Does that just mean not having an image assigned to drive 1, or is there
more than that?

Thanks for your help,

Jetware

1581. New Atart version available!

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-22 20:12:28 UTC
From: Vladimir Tichy <vtic7620@mbox.troja.mff.cuni.cz>
Message-ID: <20040422220230.21E.0@mbox.troja.mff.cuni.cz>
Source record: 16238

Atart is a tool for making Atari XE/XL casette archives on the PC and for
their loading into the Atari XE/XL computer.

Atart can also work as .CAS archives editor and as an Atari casette
recorder emulator.

Now its new version 1.07.0 is available!

Main new features:
- possibility of using under Microsoft Windows
- file length limit in unregistered version extended from 8KB to 16KB
- finished ability of using ATASCII characters

see
----
http://sdq.webpark.cz/atari/projects/atart/index.html
----

enjoy!

Vladimir Tichy

I think it is included in the Bobterm program archive if memory
serves. I know I used to use it. It was soooo cool to use my 800XL
on GEnie at 80 colums. I still have my Bobterm disk around somewhere
with the setup I think. The way it worked was the Bobterm menu was on
the regular monitor and the terminal screen was on the XEP80 monitor.
Have you checked the docs in the Bobterm archive?

From: "Rick D." <sysop2004@a8maestro.com>
Message-ID: <40887D09.A6E5E40E@a8maestro.com>
Source record: 16242

Hi,

After chatting last sunday, I have put up info on making the eprom only available for the Jaguar BJL mod.

Since I can burn these, I will now burn them for those that do not have acces to a burner...$5.00 for the 1st eprom, .50 for each additional, plus shipping and tax as needed. This is burning ONLY. Using your eproms. I can provide eproms too, but the price depends on what I have in stock or need to buy at the time of the order.

I hope this helps many others get BJL running on their Jaguars.

1587. Trade for MIO?

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-23 21:28:56 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040423172856.21796.00000141@mb-m15.aol.com>
Source record: 16244

I have a couple of 256K MIO's that have been gathering dust since I got my Black Box setup. I probably won't sell one, but might trade one for an Atari "something". If interested, send an email. I do have a Seagate MFM drive and an Adaptec controller to go with it.

Hey, maybe someone with one of those $3000 or so 2600 carts might be interested. :-)))

Larry

Source record: 16245

Spring Cleaning! I have way too many 5-1/4" floppies since I have archived most of my stuff to ZIP carts and CD's. If anyone is interested in some of those, email me. Postage and maybe $1 for a box to ship a hundred or so in is all is all I'll be looking for. These are for the most part excellent disks, mostly with Tyvec sleeves. I've thrown away the junkers.
Larry

1589. Real.Dos Beta

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-23 23:59:43 UTC
From: sjcarden@bellsouth.net
Message-ID: <1936fce9.0404231559.a5e00cc@posting.google.com>
Source record: 16246

Real.arc is up on my TCPIP Express board right now.
If there is a lot of calls I will set up an emulated bbs on port 53
<telnet>

Welcome to the REALDOS beta Test Version 1.0a

This Version of REAL.DOS is Shareware.

Written by Stephen J. Carden ,Ken Ames, and Tom Hunt

Inside the 8-bit bbs ExpressPro.dyndns.org Port 8888 or 8889

or send letter's / comments to

Stephen J. Carden

sjcarden@bellsouth.net

NOTE NOTE NOTE NOTE:

This DOS is shareware.
Except for Lance Rinquest or any one or company affilated with him
for
the purpose of bussness. At which time Lance Rinquest will pay
$5000.00
a copy to distribute it with out compensation of the end user.

Real.dos can be sent by any means as long as this file, Sparta.com and
Real.dos
are all sent together. With out any changes to these files.

Real.doc This help file
sparta.com toggle swap the id bytes need by some program
real.dos Disk OS SYSTEM

This computer program is distributed on an "as is" basis without
warranty
of any kind.

This version of RealDos contains both the mux sio and the none mux
sio
and a high speed sio for the Atari Emulators.
This dos will relize how it is being called and will load the proper
siov
handler for your need's. By configuring the DOS this way, allows the
US Doubler 1050 disk drives to function in hi-speed mode again.

This version of RealDOS Was written to fully utilize the BLACK Box
and

the Multiplexer as well as Atari800Win. While this version of the DOS
was
written for these devices they ARE NOT necessary to use, An MIO will
work
just fine with the dos. This dos was primely designed for Ken and I,
and
Harddrive system as well as other Other Power Users systems.

If we have done this correctly then this is the only CLI dos you will
need
for any of you Atari Needs.

Ok enough of this junk. here are a list of the changes;

Added OS detection to load the proper siov routeen for Multiplexer,
Emulator, or
USDoubler. Auto Detection of hardware including Blackbox, MIO, and
KPI. Auto detection
of R and P Handler. Detects R Time-8 cart. Here is the real big on.
Auto Detect of
NTSC or PAL machine and set's the Clock timer to 50 or 60 hz in the
dos.

removed "ainit" function
added md for makeing directory
added mkdir for makeing directory
added rd for remove directory
added rmdir for removing a directory
added chdir for changing a directory
added cd for changing a directory
added cls for clearing the screen
added ver for version of the dos
added cold for cold start of computer
added echo for turning the screen on and off
added case insentivity (lower case ok to use)
added mux compatable cio handler
added Emulator cio handler
added drive 9 support GREAT to set a ramdisk up on

Note: That all the classic SpartaDos command are STILL valid
except
for the ainit.

Define: md or mkdir
Syntax for use:
md dx:>stuff make a dir call stuff
md dx:\stuff make a dir call stuff
mkdir dx:>stuff make a dir call stuff
mkdir dx:\stuff make a dir call stuff

Define: rd or rmdir
Syntax for use:

rd dx:>stuff removes a dir call stuff
rd dx:\stuff removes a dir call stuff
rmdir dx:>stuff removes a dir call stuff
rmdir dx:\stuff removes a dir call stuff

Define: cd or chdir
Syntax for use:
cd dx:>stuff Change director to stuff
cd dx:\stuff Change director to stuff
chdir dx:>stuff Change director to stuff
chdir dx:\stuff Change director to stuff
cd \ change to root dir
cd .. carries you back on directory
chdir \ change to root dir
chdir .. carries you back on directory
cd ..\.. carries you back two directory
chdir ..\.. carries you back two directory

Define: cls
Syntax for use:
cls clears the screen

Define: ver
Syntax for use:
ver Displays the current version of Real.DOS

Define: cold
Syntax for use:

please note that this command doesn't function
with the mux operating system use run e477

cold cold starts the computer

Define: echo
Syntax for use:
echo on turns the screen on
echo off turns the screen off

very usefull when copying a large amount of file(s) to a
ramdisk.

Well, I guess that is all of it. I Had fun making these mods, and
if you
like it at least drop me a note. Steve

> caps? Do you know if the AT88 can be configured to not be the boot device?

The most likely culprit is that the 1489 chip used has an input resistance
that is too low. Some of these chips drive the SIO bus voltage down to 1.5v or
less. Works, but barely. Some peripherals like the Percom dont work right.

A work around used is to put strong pull-up resistors on the data line, but
that might not work either, depends on the design of the percoms data interface.
This will also cause Pokey to sink more current than normal while operating
the bus,
which is not a good thing but is unlikely to cause the chip to fail, at least
right away.

Steve

1598. XEP80 software (driver)

Newsgroup: comp.sys.atari.8bit

Hi group,

I recently acquired a nice XEP80 box but without the soft. I checked the faq and googled around for a while with no results. Does anyone know where can I find the diskette (image) that originally came with the interface?

Thanks in advance.

Hi Jetware-

http://www.geocities.com/atarimods/

http://www.geocities.com/atarimods/sio2pc1.html

The first link is to Clarence Dyson's mods.
The second is to the SIO2PC/APE cable. I built this cable after my initial cable didn't work with a real drive in the chain. (Note: the little "add-on" circuit at the bottom of the page has never worked for me.) You will get differences of opinion, but I believe that the shown capacitor *is important*.

(Again) if you do not start APE, but with the cable connected, will your Percom boot? Then (assuming that the Percom booted), start APE and assign a drive to it (not D1:). Does it work? It still might be the Percom, but I lean to the cable.

Good luck,
Larry

1603. FA:Many boxed+new XEGS cartridges & ATARI 2600 games

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-24 23:46:21 UTC
From: webmaster@klassische-videospiele.de

I offer many boxed and new ATARI 2600 and XL/XE cartridge games.

XEGS carts are NTSC , but work on PAL machines, too.

I have many classics - Rescue on Fractalus, Archon, Ballblazer, Star Raiders 2, Moon Patrol, Robotron 2084, Joust, Lode Runner ... and the XEGS releases like Airball, Thunderfox or Crime Buster for good prices.

I can ship worldwide, the auctions are on ebay.ch (Swiss ebay), but shipping is possible worldwide, I accept paypal.

Look at :

http://cgi6.ebay.de/ws/eBayISAPI.dll?ViewSellersOtherItems&include=0&userid=klassische-konsolen&sort=2&rows=25&since=-1&rd=1

(European ebay)

or

http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&include=0&userid=klassische-konsolen&sort=3&rows=25&since=-1&rd=1

ebay.com

Please ask if you need and English description.

Source record: 16261

Sorry -- forgot to answer your other question. Yes, the Percom can be D1 - D4.
But -- Percom had several variations. Do you have a Percom manual for your
drive? Look at:
http://www.atariland.com/members/oldatarian/prcmprm1.htm

There is some good Percom info at that site mostly from Ben Poehland's Atari
Classics articles. It includes changing the drive ID's.

I'm interested.. Need any hard drives (SCSI, MFM or RLL?) I have a good
collection of HD's here (including 3.5 for laptop, etc.)

If not, how about a Microsoft Racing Wheel (w/pedals)? It only used the
old style game connector (not USB).

Well, he could be using ZIP disk and CD on a PC, and then using either
an emulator, or an SIO2PC style setup...

Or, something like BlackBox or some IDE HD connector for the 8-bit would
work. (MyDOS and SpartaDOS can both handle it, among others.)

> ...you have a Zip drive connected to an 8-bit Atari! How did you do it? <

I use a ZIP-100 internal SCSI with my Black Box setup. I am told that the external ZIP-100 (250?) SCSI drives can also be used, but with an adapter since the external drives use 25 pin connectors.
Internal ZIP SCSI drives are not common. If it weren't for the Mac folks, they probably never would have existed. External drives are much easier to find.

But since my Archive is now mainly in ATR images, all those are stored via APE to (PC) ZIP-750 carts which then move easily to CD-Roms.

I recently put a CSS-upgraded XF551 that I rarely use into service.
Interestingly, with my normal system setup, it produced obvious SIO errors.
(skipped sectors and an occasional "squwaking" or "garbled" SIO sound rather
than the normal, crisp SIO "chirp." I started trying to isolate the reason for
this and found that if I unplugged the SIO2PC interface the strange sound went
away and the SIO was normal again. This is a purchased interface that I have
used for several months. Next I unplugged that drive and plugged in the 1050
that I normally use. No "interference" with or without the SIO2PC interface
plugged in. I don't ever recalll having this happen before. Any thoughts as
to a possible root cause?
Thanks,
Larry

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Message-ID: <ZS7jc.51610$bl.30206@okepread03>
Source record: 16275

Well I went into the MIO config and moved my hard disks to drives 2 and 3, and boot off the Hardback disk image (sio2pc atr file) as d1. It loads and gets the a screen and flashes very quickly I need sparta 3.2d. Then it goes to the self test memory test. How can I do anything about the DOS if it is a boot disk? You can't get a directory of it if you try and look at it. The whole reason I am doing this is my hard disk gives me a 'bad sector or write protected' when I try and write to one of my subdirectories and/or create a new subdirectory. I was going to back it up, then hdinit it. Unless you know of an easier way to fix this. I think I have the MIO utilities somewhere, not sure.

How large are the partitions? Would it be possible to just sector copy each partition into a large disk image, then replace the hard disk and sector copy them back after re-creating the partitions on a new drive?

Steve

1622. Re: Need assistance with hard drive backup

Newsgroup: comp.sys.atari.8bit

Well i'm not even sure the hard drive is physically damaged. It seems to be more of a fat problem or something equivalent. The first partition is 16meg and i'm afraid going of SIO would take an eternity.

1623. New to group... got a question

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-27 01:37:28 UTC
From: Rob Carroll <robert.carroll30@verizon.net>
Message-ID: <sPijc.82206$L31.33901@nwrddc01.gnilink.net>
Source record: 16280

Hey all,
I've had my Atari 400 since I was like 7... not too long ago, a friend gave me an 800XL, so I could play some "beefier" games and whatnot.

Anyways... the 800XL's keyboard isn't working... the system keys on the right hand side all work, and pressing BREAK or Shift and Z, X, C, or V will display a carriage return, but that's it.

Cartridges will load, but I can't play Star Raiders, so what's the point? Also, I wanna load up some cassettes.

Any advice? She's in pieces now.

Thanks!
Rob

There is a mylar sheet in the keyboard that probably needs to be replaced.
Best electronics or most Atari retailers would have it.

1627. Disk drive for XEGS?

Newsgroup: comp.sys.atari.8bit
Date: 2004-04-27 02:10:40 UTC
From: cbmeeks <cbm@signaldevREMOVE.kom>
Message-ID: <408dc0d4$1_1@127.0.0.1>

Can the XEGS use the 1050 disk drive?

Is there one that has that "XEGS look"?

I just bought an XEGS on eBay (for $21) which came with games, joystick
(no gun), etc but no storage device.

Thanks

cb

Yes you can use any of the 8bit disk drives with the XEGS (810, 1050,
rana, percom, indus gt, etc..) Infact you can use any 8bit device
that use's the SIO port.

Atari released the XF551, which matches the XE styling.

That's a good deal. Good luck.

DoN'T you have the FLASHBACK! hard drive backup program by ICD?

IIRC FlashBack is a file and isn't on a protected disk. Also I'm sure it was made for MIO users, so
it should work for you if you are using a MIO and SpartaDOS. Since it is a file you don't have to BOOT it.
Just run it from a disk. Not sure but you probably could copy it to your harddrive and run it from there.

I have the original manual here, but my disk is some where in storage.

If you don't have this program, someone may have it on a 8-bit FTP site.
I think the file was originally named "FLASHBK".

Sometimes you can straighten out a directory or subdirectory by copying the directory(s) and files
to another partition, then delete the original directory and files. Then copy or move the directory(s) and files back.
If you have the extra room on your Hard Drive.
I have copied whole partitions, a directory at a time like this and it has fixed some problems.

BTW, when I ran my MIO and hard drive setup, what I use to do was create a Folder or Folders
on the MIO RamDisk and copy all important files to these Folders. This way they will be there even
if your hard drive or system crashes since the MIO's Memory is Safe, even if ya have to reboot.

This appears to be the case. When the 14C89-based cable is plugged in to
the Percom drive, pins 5 and 7 drop from 5 volts down to 3. It sounds like
I need a cable that doesn't load down the SIO data and command lines.

Thanks for your help.

Hello,
I bought a 1200XL on ebay "as is" it power up with the red light but I only have a green screen (not the standart blue one) and nothing more.
(this is not a connecting problem as my 800 NTSC work just fine on my european TV)
I've try both the rf and monitor jack connection with the same green screen...
I already open it and push all the IC strongly but no luck with this again...

Every help is more than welcome.
(please write clearly as my english is not as good as I would like ;-))))
TIA

That sounds like a good idea, but if it does not pan out, all you
have to do is just get the 8-bit Commodore monitor cable and a
video converter and your all set.

This is good. A green screen means that it is mostly working.

First thing I would do is leave it on overnight and then try to reboot
the next day.

If that does not work, I would swap in a known good RAM chip to each of
the 8 RAM chip locations.

Of what is left that could be going bad, possibly the 6502 or ROMs.

The keyboard plastic edge connectors and conductive traces are probably
going south. If they are intact, cleaning with a pencil eraser followed
by some rubbing alcohol may work. Some people use conductive pens to
repair traces.

IMO: 3 volts should be enough for most logic so the Percoms are probably
the problem.

The fix since you are using a 14C89 would probably be to just add series
resistors on the data and command lines. IIRC: The 14C89 and 1489 both
kind of artificially load the lines more then they have too to meet the
RS232 spec. The internals are equivalent to a ~3 transistor high gain
inverting amp, so they could probably be driven with a whisper.

If you have an extra SIO cable here is what I would do.

Plug the Percom into the Atari and the extra SIO cable into the Percom.
Connect the SIO2PC cable to the SIO cable using jumpers for all the
lines other then DATA and COMMAND. For DATA and COMMAND use ~10k
resistors. Just stack the connectors on top of each other and do the
jumpers pin for pin.

I don't understand why booting from SpDOS 3.2d is a problem. You mention
you have a SIO2PC cable.
Just get a SpDOS .atr and boot from that,
from the SIO2PC cable, and move your hard drives from D1: using the MIO
menu.

I play Atari for fun.
I got one of Steve Tucker's APE/PRO adapters, it really works great!
My first use of the PRO PC program, I made a PRO file of 'Shiloh, Grant's
Trial in the West'. (1 CRC, 4 Phantom)
Then I played the game off my APE118DOS with the interface. Took three days
to finish, pretty much all day.
Fun, fun.
Of course I used a stock 1050 to make the .PRO file.

Booting from that is not a problem - never said it was. My goal was to backup my hard drive to an atr image file using a program that would copy the entire contents automatically. I ended up using Flashback and it worked great. I ended up having to low level format the hard drive before I could write back to it. Thanks for the input!

(booting from SpDOS atr not a problem.)
I didn't follow what you said I guess.
I'm not familiar with flashback (flashbk).
The low level format you mention... which hdfmtph did you use? (I guess you used a hdfmtph. I have about 6 of them 4, 6, 8, 9 and no number and a black box one). I think I found hdfmtph6.com to be the only one that worked for me.

Sounds like fun. I've been doing quite a bit to my 800xl (my original computer) lately as well. I just added a Wizztronics 256K upgrade, a switchable BASIC/ASM chip, WarpOS 32-in-1 chip, and of course hooked up the chroma line so I can get some better video output. Last thing I have to do is get MyIDE hooked up. I love getting back into the 8-bit Ataris, and I'm having a great time doing the mods - especially since they've been successful. :) Thanks to the various people out there that I've been trading with and asking questions of. This is a great community!

By the way, I'm thinking of doing the MyIDE via the external cart hookup. Does anyone have a non-working XE cart or two that you wouldn't mind parting with so I can use the casing?

Thanks to you and Rick for the help...

I have 18 rams KM41256-15 (810 korea) : Can I use it to remplace the others ?
(I know that it's more than the standart one but simply don't know if they could
be use and give the "standart" total of memory needed by the 1200XL).

And, if they could "work", all I have to do is : put another one on the first and try
and so on to find the faultly one. Right ?

Thanks again

I bought a 1050 to PC cable from Poland and it has been alot of fun working
with protected diskettes and making PRO images.
Most any of the cartridges are usable I took the guts out of a Frogger
Cartridge to make mine. The all plastic carts without the spring loaded
opening should make a nice cart for the MyIDE. Also with the 130 Xe I used
the interface without a cartridge case for several weeks..

Hello Jetware-

Well, you have lots of things to try. BTW, if the issue is the (14C89) interface, have you considered building a MAX232-type? They are a little more complicated, but not that difficult.

When you do get this working, could you please tell the group what ultimately cured the problem?

(Slor put BASIC/ASMED switchable in 800XL along with Warp OS 32 in 1??)
I've found that I like to just have executable BASIC and ASMED on a disk.
It is then easy enough to just load either one, and exit with RESET. Works
on real thing or emulator.
Too bad no emulator handles PRO files. I think it is a proprietary, Tucker
format and nobody knows how it works. The Shiloh was my first experience
with .PRO, I haven't even tried the .PRO files that come with APE. 'Simple'
emulation didn't work, but '1 Mindscape' worked.
I don't see any explanation of the .PRO emulation modes, there are 10 of
them.

Howdy Leon

> Wow, you have a Zip drive connected to an 8-bit Atari! How did you do it?

Go to my website (I quite university over half a year ago, but my site is still up. I hope.) at http://www-users.rwth-aachen.de/mathy.van_nisselroy/stuff.htm and download ZIP2BB.ARC. That's how I did it.
BTW I also have an 80MB harddisk and 2 CDROM players connected to it. Check out my homepage to. Unfortunately I can no longer upload files to the university computer, so I can not update my site. Latest version of DATA is 62. Still doesn't have a file viewer or copier, but it's still under developement. I can look at the directories and at the separate sectors.

Howdy Larry

> Congratulations! Can you read any sector now? I presume this is
> Dos-independent (and in effect, you provide your own "Dos" via your Turbo
Basic
> program. (?))

Reading a sector was the first thing I could do. You have to, as that is how you detect where the directories are. Latest improvements: it's really fast, it takes up less memory, I can load the pathtable untill I either reach the end of it, of the string is full (2048bytes at the moment), even if that means I have to read more then one sector, directories are shown completely, independent of their length. But I still can brows a file or copy it to disk. And their is still this (harmless) bug that after I power it up with no CD loaded, it somehow goofs up. But after a quick unload and load of the CD, that's over.

You can use it with any DOS you want as long as it is TurboBASIC compatible. Only problem could be that the ASPI manager could be in the way. It was Matthias Belitz's intension to move the ASPI manager to BlackBox ROM (see the FlashROM upgrade on my site) (ASPI versions for different harddrive interfaces - still none exist but the BlackBox version - in different harddrive ROM's ofcourse). Unfortunately, Matthias doesn't seem to have much time anymore. I'm not sure if my software is in the same place if you use a different (version of) DOS then I am. I'm using the Beta version of MyDOS 4.55.

(Review 'Shiloh, Grant's Trial in the West').
SSI about 1987-88.
I'm leaving my computer and may not be able to post for about a month, so I'll try a quickee.
It is custom characters, graphics 1 or 2, I think.
There are 900 squares, 30 x 30. You start as either confeds or union, or two people can play or you can watch the computer play.
It is a pretty complicated game, it would take a while to figure out without good documentation (comes with a 60 page book). Has simple, intermediate and advanced levels of play. Joystick with simple only, the other two use only keyboard. You get a disk, book, map and catalog.
The disk has two sides, and you can copy second side and use two drives. Side one is copy protected.
I think this is a pretty standard format for these war games. I couldn't figure from reading when the game ends. After four real time days, I came to 6:30PM 4/7/1862, the game ended. I was confed and got clobbered. I did well at first, but after the first day, it was strictly downhill for me.
You get a graphics screen with topography (no elevation map, tho, that would have been useful to get a good firing position, especially for artillery.)
The units are infantry, calvary and artillery. You can stack up to two infantry or cavalry and one artilery on a square.
One move is 30 minutes virtual time, I think. You start about 8 AM 4/6/1862. There are cursor and access menus. Basically you move the cursor around the map, button on a unit, then access menu comes up, get unit, then action menu. There you can select FIRE and then LOS (Line of sight) and Target Square. After you've finished with all your units, you COMBAT and the computer takes over and resolves your turn. The computer first does defender artillery, then attacker artillery, then defender rifle/musket, attacker rifle/musket, then melee is done and defender, attacker. After all the shooting then retreat is done, advances are done. If a unit is ROUTED and DISRUPTED, it is lost from use, I think for the rest of the game.
My memory isn't so great.
You have to access all units on a square. The icons indicate single inf or cav, dble inf or cav, artillery by itself, or artillery with one or two cav,inf. You access one unit on a square, finish that one, and then OTHER UNIT.

It is a bit complicated as there are about 11 pages just for the beginner's game.

On a strategic level, I don't see the confeds winning this game, not very easy anyway. Confeds try to reach Pittsburg Landing on the Tennessee river, to avoid Buell's 19,000 men from re-inforcing Grant on the West side of the river. There are two Fed riverboats, that will ferry Buell's men accross during the first night. The game only lasts two computer days, at the end

of the second day, it is finished.
I'd need to really write this up proper to even give a chance of playing the game without the book.

I am curious about Atari cassettes -- I bailed out of my original 410 recorder as fast as I could find an 810 drive! (Believe it or not there was a modest shortage of 810's in '82.) But I am curious about the CAS format and if there is a convertor to create a bootable (ATR) disk or some other format. I checked the FAQ's and found some info, but I haven't found anything about the structure of a CAS file; nor have I found any conversion tools. Any info would be appreciated!

Why should you try Bravo Sierra Computers? Maybe you should ask Why Not? Those telling you Not to buy have there own prejudice to deal with. I can only speak for myself. Why Buy from BSC? Good Service! I earn your Atari Business one Customer at a time! Many Customers refer me to friends. Good Support! I'm in this for the long haul. Should you need Atari Help, I held teaching positions in my local Atari Clubs. You can call me or I'll call you for Atari Phone Support. I'm a good teacher, and I dont speak over my students heads! I prefer to keep it simple when necessary. Atari Sales! I have a lot of Atari I can sell you! Games/ Software, Hardware, Books and Accessories.Rather than print up a Catalog, thereby making it out of Date! I regularly update my Catalogs, for you to Download or view online at:

So just how do I get a copy of REAL.DOS if I don't have the software to
download a copy. Are there anyother places that this file is available
except for Telnet. I get to log on but the file will not download. I keep
getting a file of Zero "0" length file.. Oh Well!

> of a CAS file; nor have I found any conversion tools. Any info would be
> appreciated!

The "CAS" format is the Atari BOOT format. The first block (on a casette
typically 128 bytes) contains a 6 bytes header.

from <http://whttp://munsie.dhs.org/DeReAtari/chaptC.html>:

1ST BYTE is not used by the Cassette Boot process.

2ND BYTE contains the number of 128 byte cassette records to be read as part
of the boot process (including the record containing this information).
This number may range from 1 to 255, with 0 meaning 256.

3RD and 4TH BYTES contain the address (LO,HI) at which to start loading the
first byte of the file.

5TH and 6TH BYTES contain the address (LO,HI) to which control is
transferred after the boot process is complete. Pressing the [S/RESET] key
will also transfer control to this address assuming that the boot process
is complete.

When step 2 is complete, the Cassette Boot program will have:
Saved number of records to boot
Saved the load address
Saved the initialization address in CASINI [02,03]

The same format is used for booting from a disk, so it is possible to write
a CAS file to a disk image (starting at sector 1).

Sorryly in most cases this will not, because most CAS files are build of a
little header that than loads the rest (and shows a sector counter or
something). This header needs to be patched to load the rest of the file
from disk.

The simpliest solution is to use a "C:"-Simulator. This will simply patch
the sio-address to some kind of mini-dos, allowing multiple CAS files to be
loaded from a Disk. If you cannot find such a beast, mail me and I can send
you one for DD-disk (maybe works for SD disks either, cannot remember :-).

best regards,

Out of the Atari business for now and probably the near future.

I went by the FTE office when they were still active a few times. About the only hardware he got from ICD was a bunch of PR:Connections. No MIOs or anything neat. The MIOs used an odd zip ram, so they weren't really viable for new production. I don't think Mike got schematics or board art for them so it would have been a reverse engineering job and new design to get it going. At some prior point the rights to an MIO became kind of worthless since it needed a new design.

It's never been explained publically/officially what has happened to the rights to the ICD products by the parties involved(ICD and FTE). I believe Newell posted something to the effect ~he considered the rights to his products had reverted to him and was placing the memory upgrades in the PD. He didn't say anything about Omnimon or Omniview IIRC.

Unless someone can find a post from ICD to the contrary I think it is safe to assume the rights are still with FTE.

You could also try and find a copy of SAM (Software Automated Mouth(?)),
a software-driven synthesizer for the Atari.

Back in the day (early 90s) I found a old computer magazine (maybe it
was an ANTIC?) that described how to hook up some speech-synth chip from
Radio Shack (gave the part number and everything, I think!) to an Atari's
joystick port and talk to it.

Sadly, even by then, Radio Shack had already stopped selling it, and most of
the other interesting/cool stuff that made it an interesting store.

That would be a voice synthesizer... A digitizer would take an analog sound
source and put it in the computer. :-)

Anyway, I think there was one you could build in Antic, let me check....
Here you go:

I've tried both of those, and I consider Atari800Win Plus the better
product. I've noticed that when it comes to emulators, specialized
types that deal with one or two systems do a much better job than the
generalized ones that try to do too much at once (although to be fair,
MESS does make a pretty good Atari 7800 emulator).

Ernest Schreurs wrote to me in an E-mail:

Hi Ed. Yes, that is what I said.
We can send you a Pooldisk Too (which is two CD's) on spindle CD-R.
That means no jewel case and nothing but the CD's. Shipping is
cheaper this way. For US $5 in cash in an envelope we will send
you the disks by the cheapest rate, and if you add one dollar we
can make it priority mail, which usually takes about a week or so.
Money orders or checks will cost us something to process, so that is
why this is simply either $5 or $6 in cash in an envelope.
The risk is not that high then, and it is easy and quick.
Of course it should not be visible from the outside that there
is money in the envelope.

Send the envelope to
Ernest R. Schreurs
Kempenlandstraat 8
5211 VN Den Bosch
The Netherlands

Regards, Ernest.

My disks came today and I spent NINE HOURS exploring the disks
and playing with files! This is probably the best $6.00 I ever
spent in my life.What a wealth of information!
I strongly urge everyone to obtain a set,to show the Schreurs brothers
that we appreciate all their hard work.

Hi group,

a new release of the atari 8 bit emulator for Linux and Windows
has been released at its usual place:
http://www.math.tu-berlin.de/~thor/atari++/

Concering the emulation, I've to thank Slor for sending me
screen snapshots of the NTSC artifacting in for Hires modes; an
improved emulation, also taking care of the background color is
now integrated into the emulator.

Furthermore, the 1.33 release fixes two annoyances: For first, the
GUI now supports mice scroll-wheels, and for second the keyboard
has now an input buffer for fast-typers like me. This can be disabled
if buffering is undesired for fast keyboard controlled games.

Some minor enhancements overall the code and the build-process have
been provided as well.

Have fun,
Thomas

Hi Michael-

Thanks for the info! That turned out to be a lot simpler than I had expected.
I will try out a few.

Unhappily, I've never been able to get either Super C: or Transdisk to work on
my NTSC set up. IIRC, they both read fine, but then "hang" before writing.
But I haven't tried them in years -- so it would be a good time to have another
try.

Larry

That makes for a natural second question -- has anyone using an NTSC system
ever been able to get any version of Transdisk or the Super C: Emulator to work
properly? Or perhaps someone has been successful using the NTSC system with
the PAL-chip modification?

Carts are programmable in-system in your Atari and do not require and eprom or flash programmer.

Sign up for the forum, there are hundreds of pre-made images there to burn on flash carts, plus
a complete open source dev kit to roll your own if you desire.

When FTE first got the rights and products years ago, I did get a
upgraded SDX cart from them.

Also they sent me a printed update back in 1995 of what they had been
doing. I found this while looking through
some of my old 8-bit papers.

Several new products were announced and supposed to have been shown at a
few shows.

The Mars 8, The MIO II, and Sweet 16 were 3 of the hardware items
mentioned in the (GET-REAL GAZETTE Vol.1 # 2)

as it was called. And from what I read, Proto types of all these were
made.

Just wondering if anyone ever saw these proto types at any Atari Shows
years ago? And if anyone has any other info
on what happen to them.

I'd rather have a Cartridge version 4.19 thru 4.22. The version isn't
real important. I could use 2 or 3 carts.

But it seems that finding just 1 is tough.

I have disk based versions of SpartaDos.

I'll check out atarisales, and keep looking...

Thanks,

I saw some of the stuff. I think several people in the newsgroup have the Sweet 16 board.

Off on opinion road here. The problem with the Sweet 16 was the same as the problem for Dataque's 65816 board: In compatibility mode it does nothing for the Atari. There just wasn't a lot of stuff that would take advantage of the '816 features and there weren't a lot of tools other then John Harris's MAE for working with it.

So what needed to happen was rewrites of things like the OSS cartridges to get the tools into people's hands. Rewriting Action! BASIC XL, BASIC XE, etcetera was/is pretty much impossible from a manpower standpoint at that stage of the game.

Have you released the source of the actual flashing module? It would be
neat for custom project to be able to write to the cartridge.

Hi. I'm trying to find a copy of the Acey Ducey Backgammon from the 2600 that can be run on a PC. It doesn't matter to me if I use a generic emulator & some copy of the game rom or if it's a binary that only plays the one game. I don't have any experience w/ 2600 games on the PC, but it would also be ok if someone had the source & some way to compile it for a PC.

Any help greatly appreciated! It's something my Mom is looking for... :)

1706. Short Review of New Cartridge Castle Crisis

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-02 02:56:14 UTC
From: Daniel Miller <NOSPAMdaclmi@sisna.com>
Message-ID: <kam890t94623gdrj7rfjfmbr2pr1fi812b@4ax.com>
Source record: 16064

I found this new Atari 8bit cartridge in an article at www.atari.org and decided to get it a few days later. Authored by Bryan Edewaard, it's a version of the early 80s-era Warlords standup arcade game. In this new cartridge-based game, as in the original, you manipulate a paddle controller to deflect fireballs away from your own castle into the walls of your opponents' castles.

The game concept is straightforward and reminiscent in some ways of Breakout. It's a multiplayer concept (this version DOES allow single player mode by assigning the control of the opponents to the computer). The use of the paddle controllers is rather daring, as so few games for the Atari 8bit use the paddles. I'm sure there are lots of people reading this who might like to get Castle Crisis, but they don't have paddles. It was absolutely necessary for the game though. It would be horrible to try to play this with a joystick. You might be able to get away with a mouse but then you don't get the multiplayer option.

REQUIREMENTS: Castle Crisis is stated to run on all Atari 8bit computers with at least 16k, so that means all Atari 8bit computers unless someone has one of the earliest 400s with 8k and even then you might try it. You do need paddle controllers such as came with the Atari 2600 VCS or were separately sold. You need a second pair of paddle controllers if you want to be able to play three or four people.

GRAPHICS: These graphics are just great. They are very colorful and at a good resolution. They are modeled closely on the standup arcade game without being "held hostage" to those graphics when it wouldn't make sense. There is a good balance between fidelity to the original and making proper use of the Atari 8bits uniques hardware.

SOUND: The sound is rather good, with dramatic metallic distorted noises when the fireball is richocheted around.

PLAY VALUE: Oh my gosh, this is so good. It's a challenge to get to level 2, and a real challenge to get to level 3. The game has an addictive quality and there are strategic elements that only become clear after several games. Do you want to pick off your immediate neighbor's castle and get him out of the way, or is it wiser to inflict damage on all of your opponents evenly?

PACKAGING, MANUAL, CONSTRUCTION: Oh well, there is not much in the way of packaging, it comes in a little plastic bag. There is a single slick page of instructions. But wait, there is good and interesting news on the quality and construction: it is just like an official

Atari cartridge with the solid metal and treated plastic materials. In fact it IS an Atari cartridge, I have no idea if they soaked the labels off a stash of ETs or if they came across some old stock. The label on the cartridge looks just like an Atari label. All it's missing is one of those CX part numbers.

SUMMARY: This is a retro-gamer's dream, it is really that good. For those of us who were 12 or 17 or whatever back in the 80s drooling over the Sears catalog and anticipating a great new game for our 8bits, this really comes as close as anything to reliving that, but Castle Crisis is also fun on it's own merits in this year 2004. It has a wholesome quality when compared to the decadent and violent games prevalent today. It is amazing to get this quality of current development for computers that are minimum 13 years old now. Castle Crisis is a real winner!

For more information (and to download a video if you like!) go to http://members.core.com/1F/A1/bryede/cc/.

1707. eBay auction: Atari 800/XL/XE to SCART/RCA cable - gold-plated

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

Source record: 16069

Well,
there are several ways to do so: With the original hardware (A8
computer, data-recorder and er, some cassettes) you can use a so-called
C:-Simulator (here in Germany we have various versions available) or one
of the british menus (alphaload, k-boot, howfen-dos, multiboot, jon w.
menu, elton c. menu, transdisk, etc.) to convert a cassette based game
onto diskette. now, with a .CAS file you can use an emulator (like
Atari800) that is able to read+emulate CAS files.

Hmm, a bootable ATR image ?!? Looks like you are using SIO2PC, APE or
any other of these floppy emulators. Well, try this: Format a disk in
single (90k) or enhanced (130k) density, DOS 2 / 2.5 format. Then use
Micro-DOS by Stefan Dorndorf (Germany) or MyPicoDOS by Mathias Reichl
(Austria). Just load the Gamedos and "initialize" the disk with the CAS
files - which writes a bootloader to the CAS file disk. Both Gamedos
versions are able to load COM, EXE and BIN / boot-image-files as well as
CAS files, provided that the disk uses only 128 Bytes per Sector, I
think (at least MicroDOS has that limitation)... -Andreas.

P.S.: If you need a copy of Micro-DOS and/or MyPicoDOS, then e-mail me
!! Use this e-mail adress or simply: amp#abbuc*de

Yep,
FTE still has the rights of the ICD products. Alas, he (Mike Hohman) run
away with the money from dozens of Atarians that placed an order after
reading the FTE adverts... So, people payed for FTE stuff, but never got
anything back. Thats why many Atarians now treat those items as if they
were PD. I can understand that - ABBUC had also ordered a lot of items,
payed them - but never got anything in return... Meaning, if FTE/Mike
Hohman will complain some day because of copyrights, we can also
complain because of our money we have (already) paid. Thats the Atarian
way (eye for an eye)... not the best one, but it works... -Andreas.

P.S.: We are not talking about some tenners (tens of dollars) here,
afaik, FTE did run away with many thousand(s of) dollars...

Source record: 16072

Well,
there are very few *single persons* left nowadays. I recall Sheddy, who is working on the Space Harrier conversion project and Analmux who is working on a Super Mario 3 conversion (more info about these can be found at www.atari-age; Atari 8bit computer forum). There are also some hobbyists in Poland, Czech Republic and Slovakia who write new XL/XE games from time to time... And there is the ABBUC software contest (visit www.abbuc.de - rules, etc. available in german and english) which will most probably/hopefully also feature some new XL/XE games. But there is no kind of game-maker scene for the A8, even the A8 demo-maker scene (mostly Poland, Czech Republic and Slovakia) is *almost* dead... at least in my eyes... -Andreas.

Source record: 16079

Howdy folks

I'm using TurboBASIC to write a directory mover for MyDOS. Problem is, there doesn't seem to be a way to detect at which sector a directory starts (apart from walking through every directory on a disk/partition to find it). Can you guys help me?

Most of the utility is ready (drive and directory selection), now all I need is to find out how I can find the starting sector of directory. (creating a new directory isn't always possible. Declaring a directory as the default directory would be a nice trick. But there is no way to find out what the current default directory is. Ergo, I can not reset the default directory (before I leave the utility) to what it was before.)

THE ATARI TIMES ANNOUNCES: BACK COPIES NOW AVAILABLE

April 26, 2004

For immediate release:

WINTER HAVEN, FL - The editor of The Atari Times (www.ataritimes.com) has announced the availability of the 2001 Year End Issue and the 2004 Compendium at CafePress.com.

Both books include 100 or more pages full of news, features, reviews, and previews for all Atari home systems that have appeared on the website. These include articles for the Jaguar, Lynx, 7800, 5200, 2600, home computers, and even the arcade systems. Each book is in black and white with a wire-o binding and an excellent color cover.

Gregory D. George, editor and writer for The Atari Times commented, "The moment I ran out of the original run of these books, people were asking for reprints. Well, your demand has finally been answered!"

Continued Mr. George, "These books have been updated and are better than ever. I'm greatly pleased with the quality job CafePress.com offers. The covers are beautiful, the print quality is absolutely perfect, and the binding is even better than I could have hoped for."

Two more Atari Times books are soon to be released. "The 2002 Year End Issue will be offered soon and I also have plans to reprint the original 10 paper-based newsletters into a single book. This will allow those who missed out on the original runs to finally have the opportunity to catch up."

The pricing of the 2001 Year End Issue and 2004 Compendium is $14.00. Both books can be purchased at http://www.cafepress.com/ataritimes

More information about The Atari Times books can be found at http://www.ataritimes.com/store/books.html

The Atari Times is a web-based newsletter devoted to all Atari game systems. Updates to the site are on a weekly basis. Visit http://www.ataritimes.com/ for Atari related news, previews, reviews, and feature articles.

Don't subdirs have an entry in the main directory just like files do? A couple
of bytes of that entry should point to the sector where the subdir is located
(after all, it also gives its size -usually 8 sectors- just like a regular file,
doesn't it?).

Hello,

On the subject of 1200XLs, I have a nice 1200XL with a broken keycap.
I also have a dead 800XL.

This is going to sound stupid,but in all my Atari years (20+),I have
never tried to replace a keycap.

Can I use a PC key puller to remove a cap from the dead 800XL, or will
it just break?

Thanks
Ed

Aha,
game-construction-kits or simply level editors. There are plenty for the
A8:
- Broderbund`s Arcade Machine
- Pinball Construction Set
- Racing Destruction Kit
- The Brundles (Lemmings clone!) Level editor,
- Dandy + level editor,
- Aliens + level editor,
- The Wall (Breakout clone) + level editor,
- Brik-Bat (Breakout clone) + level editor,
- Socoban + level editor
- Sogon (Socoban clone) + level editor,
- Bomber Jack + level editor,
- Cultivation + level editor,
- Boulder Dash Construction Kit,
- Polar Pierre + level editor,
- Mr. Robot + Robot Factory (level editor),
- Tobot 2 + level editor,
- Lords of Conquest + level/map editor,
- Seven Cities of Gold + map maker,
- Lasermania + Conctruction Kit
- Robbo + Construction Kit,
- Pole Position Race Designer (made by pirates!)
- Molecule Man + molecule designer,
- Slingshot (sort of minigolf) + construction kit,
- Kitten (a PD game in Basic) + level editor,
- etc. , etc.

Just some games (and editors/creators) that come to mind... -Andreas.

Well,
actually there exist two disks, named XFTOOLS.ATR. One consists of a
file (approx. 200 sectors in length) that is just a Gamedos (180k and
360k) and a sector copier (90k,130k, 180k and 360k with XF highspeed)
plus some irrelevant demo-like stuff. Think you have to load the file
and then press START or SELECT for one of these programs.

The other disk is a kinda bootdisk, that was formerly sold commercially
(by Compyshop I guess). It contains a menu, where one can choose if he
wants to load the Bibo-DOS (XF-version), a file-copier, a sector-copier,
a picture finder, etc. (all programs especially written for the XF551).
Now, I own both disks and some time ago, I asked a friend if he could
patch the bootdisk for me (since it was less than 50% filled), so that I
could use the empty sectors. He did it for me and so I added several XF
utilities to that bootdisk, including the XF-Tools file program. So, now
I have a disk that contains boot pograms (simply boot the disk without
Basic) as well as file programs (that can be loaded from any DOS 2
type)... -Andreas.

P.S.: Try to send y copy to you via this e-mail. Lets see if it works -
otherwise e-mail me...

Yep. That's the one! I remember it. I always had better luck if I rode
around backwards and put a 'spin' on my shots. Going forward and trying to
shoot straight gets you bonked.

Andreas, I really am in awe of your ability to rattle off such a list
off the top of your head. You are an Atari madman! ;)

Dare I really test you and ask that you identify which of the below
construction kits produce games that may be freely distributed,
without the recipients having to have a copy of the original program?

Anyone have a otherwise non-working 810 or just a spindle motor sitting around to sell or trade?

I have a nice 810 here but the motor that spins the disk is fried.

Steve

1739. Announcement: cc65 2.10.1 released

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-06 10:18:52 UTC
From: uz@spamtrap.musoftware.de
Message-ID: <ce3d7c.s3s.ln@news.musoftware.de>
Source record: 16100
Cross-posted to: comp.sys.cbm,comp.sys.oric,comp.sys.atari.8bit,comp.sys.apple2

I'm proud to announce cc65 version 2.10.1. cc65 is a complete cross development package for 65(C)02 systems, including a powerful macro assembler, a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines, including

- The Commodore VIC20 (contributed by Steve Schmidtke <steve_schmidtke@hotmail.com>).

- The Commodore C64 and C128.

- The Commodore C16, C116 and Plus/4.

- The CBM 510 (aka P500), a quite rare Commodore machine (programs run in bank 0).

- The CBM 600/700 family (programs run in bank 1).

- Newer PET machines (not 2001)

- The Apple][(library support by Kevin Ruland <kevin@rodin.wustl.edu>)

- The Atari 8 bit machines (thanks to the Atari team: Christian Groessler <cpg@aladdin.de>, Mark Keates <markk@dendrite.co.uk>, Freddy Offenga <taf_offenga@yahoo.com> and David Lloyd, <dmlloyd@atari-central.com>).

- GEOS for the C64 and C128 (by Maciej Witkowiak <ytm@elysium.pl>)

- The Nintendo Entertainment System (NES) (contributed by Groepaz, <groepaz@gmx.net>.

- The Supervision console (contributed by Peter Trauner, <peter.trauner@utanet.at>) (startup code and linker config only).

- The Oric Atmos (this one is - still - BETA!).

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

Changes to the last version:

This is a minor release that fixes known problems in version 2.10.0 (see

http://www.cc65.org/bugs.php

for a list). It does not contain new features.

Available packages:

As usual I will provide the complete sources and several binary packages,
including RPMs for RedHat Linux 9. Linux is the primary development
platform, so the sources do compile out of the box on Linux machines.

Please note that there are separate RPMs for the compiler proper and the
target specific libraries. To develop for one of the predefined target
systems you need the compiler RPM package *and* one of the target machine
packages.

Starting with this version, the docs are also in a separate package, so
if you want docs (recommended), be sure to download the cc65-doc archive.

Binaries for DOS and and Windows should also be available at the time you read
this. OS/2 packages will again be available, but since there are almost no
downloads for OS/2, so the host platform may get dropped in the near future
(again). As with the RPM packages, you need the package for the development
system (Windows, etc.) *and* one or more of the target machine packages, plus
optionally the doc package.

Download:

For more information and a download link, please visit the cc65 web page at

http://www.cc65.org/

Mailing list:

There is a mailing list for discussing cc65 related issues (programming,
suggestions, bugs, ...). See

http://www.cc65.org/#List

for information on how to subscribe to this list.

Thanks to all who sent feedback and suggestions, and of course to anyone who
helped developing cc65.

I wish you a merry christmas and lots of fun with this new cc65 release!

Regards

Uz

1740. Bulk order: 16-bit replacement module for the 6502

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-06 13:29:01 UTC
From: Euphoric <nospam@nospam.net>
Message-ID: <409a3d9e$1$20748$626a14ce@news.free.fr>
Source record: 16096

Hello to all 6502 fans,

Daryl on http://www.6502.org/forum/viewforum.php?f=4 has developed a (hopefully) plug&play replacement module for your 6502 (have a read of the "Replacing a 6502 with a 65816" thread).
On the size of a 40-pin DIP 6502, his proposed PCB offers room to a QFP 65816 processor and additional logic to remove hardware differences between the 6502 and the 65816.
Daryl is trying to organize a bulk order to ExpressPCB (www.expresspcb.com), in order to lower the price of the prototype boards.
I know that there are other options to insert a 16-bit processor in your favorite comp, but this PCB might be of interest to you if you don't want to solder wires inside your micro...
Ah, Daryl wants to say this is an untested-yet board (this order will allow the first build), so please have a look at his schematics before applying (I do have tested a very close schematics in two different Oric systems, by using a so much bigger prototype I couldn't close the Oric case)...

Thanks for your attention,

Fabrice

Does it have improved 65816 support?

> - The Oric Atmos (this one is - still - BETA!).

Yeah, although I coded something with cc65 for Oric, there was need
for lots of inline assembly to passthrough the undocumented features
of the Oric libraries in the C compiler.

So you are basically saying that both Lance AND Steve could be right ?
Makes sense. I mean, Lance really can't say he owns the rights to
any FTe products unless he wants to pay for all non-shipped orders,
correct ? (sorry, lance, not picking on you just trying to make a
point) that right there is basic common sense and basic copyright law
- if you say that you own the copyrights to someone elses product but
that person never shipped then the responsability would lie on you, am
i right ? On the other hand if steve really had a contract with mike
(again, not picking on mike or steve here, just making a point) and
mike either sold all FTe products to Lance, entrusted all FTe
products, or simply gave what inventory he had and retained
copyrights, then what ? Who pays Steve royalties in this case ? (hey
its been a while since i've been here so my facts may not even be
accurate if at all and if i am wrong i apologize ahead of time)

I cannot remember receiving any reports or suggestions for improvements from you. Didn't your mail get through?

Thinking twice, I cannot remember *any* reports/suggestions for the Oric at all. [/me scratching his head] Maybe this is the reason why it's still labeled "beta"?

Break out the near-letter-quality dot matrix. Buy a fresh box of fan-fold paper. It's time to put your old printer to work.

The full text of the book "The Epson Connection: Atari XE/XL" by Leigh Edward Zeitz is now online at AtariArchives.org. Published in 1986, the book shows how to get the most from an Epson printer in tandem with an Atari 8-bit computer.

The book's 13 chapters include descriptions, photos, and specifications of '80s-era Epson printers; details about using control codes to adjust your printer's output; and tips on using a printer for home finances, schoolwork, telecommuting, and for other applications.

It is available at http://www.atariarchives.org/epson/

This is the 29th classic computing book to be made available at AtariArchives.org.

As already posted on the cc65 mailing list: It's a test if anyone reads these announcements to the end. So far, you are the only one out of 126781 people in the newsgroup, who passed the test. Congrats! :-)

Regards

Uz

P.S.: It's a copy & paste error. I don't write a new announcement for each release, especially if it's just a minor release. The last sentence was a relict from the 2.10.0 announcement, which was released just before christmas.

>So you are basically saying that both Lance AND Steve could be right ?

I think unless you know exactly what was purchased and the language of the contracts, any speculation is just that, speculation.

If, for instance, Mike Hohman didn't fulfill his end of the contract for purchasing ICD products the contract might not be valid and ownership could be legally the orignal owners if they chose to go to court over it.

I don't think anyone buying the rights to FTe products are under any obligation by law to fulfill orders from that company. Essentially they are two different companies. You would've had to sue FTe to recover your money.

All of this would have to be resolved in court.

Merry Christmas Island in that case? 135 km², 474 people in 2002.

Although cc65 may currently have no support for it, does the
Acorn (BBC) 6502 people know about the compiler and have anyone
looked into using it on that platform too?

1758. 16-bit 6502 replacement bulk order : PCB schematics

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-07 08:10:33 UTC
From: Euphoric <nospam@nospam.net>
Message-ID: <409b4478$0$31943$626a14ce@news.free.fr>
Source record: 16118
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit,comp.sys.acorn.hardware,comp.sys.apple2

Browsing through the discussion at 6502.org 's forum can be tedious, and Daryl doesn't read these newsgroups, so here is his original post on 6502.org:

"After several months and many more revisions, I've completed laying out the traces for the converter. I still need to clean it up - straighten some traces, add 45 deg bends on the corners, check spacing around all pads and vias, etc.

I added to the schematic. There are two jumpers. J2 allows you to select the gate for the 74x245 and J3 selects 2 inverters or 4 inverters as inputs to the AND gate.

Check out the schematic, layout draft, and expressPCB files on my web site.

http://65c02.tripod.com/conv.html

Estimated cost for 10 boards would be $200. ($20 each)

Daryl
"

and

"The clean up is complete and the design is ready.

I am willing to place a bulk order for these boards. We'll need a minimum of 10 boards in order to get the price down to $20 each. More boards would bring the price down lower. I currently have requests for two. These are four layer standard boards produced by ExpressPCB.com.

You can email your requests to me at 65c02@softcom.net

Please note: I was asked to help design the board and used information from others to create the schematic. I have not tested it myself and cannot promise that it will work. Please look over the schematic and my layout before you decide to order. It can be found here:
http://65c02.tripod.com/conv.html

Thanks!

Daryl
"

I don't think there's any issue about Mike not having clear ownership of the original ICD products. He paid Harker for them, with some combination of cash and barter as I understand it. So he owns the stuff. Now as to what deals he made with Steve or Lance with regards to reselling any of it, I wouldn't know. In all of the talks that I've had with Mike over the years, he never in any way indicated that he had transferred ownership of any of the products. I think he might have contracted to have some specific work done, but again, I don't know any of the details there.

What I can say for sure is that I asked him several months ago if it was alright for me to post up the source code and binaries that I have from him for Sparta Dos,SDX,Mac/65 and Action!. He said no. I haven't heard from him since around that time, he was in the process of moving again.

While I'm sure it doesn't mean anything to the people who are out cash from their orders, I don't believe Mike meant to rip anyone off. He still talks about finishing stuff, but really the problem is he won't stop fiddling. There's always some last tweak, some new PAL chip that just came out, and before you know it, another year has gone by.

1762. 1200XL Memory Upgrade Info

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-07 20:10:20 UTC
From: Stephen <nospam@nowhere.com>
Message-ID: <58un90tcf0pkccjgr3pl6602iqm8o67u7r@4ax.com>
Source record: 16119

I have finally ordered an SIO2PC cable, and ready to dive full steem into getting my Atari 8-bit setup all back together. I want to use my 1200XL because of the keyboard and the side cartridge port. Lack of the PBI is not an issue for me. I plan on doing several upgrades to this machine, including the super video 2.1 mod, the Ape+ Warp 4-in-1 OS, and maybe even the stereo POKEY.

I would really like to upgrade this machine to 256K (or even 512). I have 8 41256 chips, but I cannot locate a RAMBO for the machine. I have seen Wizztronics upgrade boards, but they are for the 800XL. I tried searching a few Atari forums, and doing the google newsgroup & webpage search, but all I can find is that lots of people have (had) 256K 1200XLs, but plans for the modification are nowhere to be found. I would be grateful for any info on upgrading this machine.

Stephen

Those who were out cold hard cash when Mike didn't come through would
probably be willing to support an open source project of some sort I'm sure.
I can't speak for anyone else. But I'm sure he has his reasons for not
letting go the source.

Look at :

http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&include=0&userid=KLASSISCHE-VIDEOSPIELE&sort=3&rows=25&since=-1&rd=1

I offer 24 different ATARI 800 XL/XE cartridge games, new and boxed.

I can ship worldwide and I will accept Paypal.

You can bid on games on ebay, but I can sell without ebay, too;
trading is possible, too.

I have these games :

Ace of Aces
Airball
Archon
Ballblazer
Crime Buster
Crossbow
Davidï¿½s Midnight Magic
Desert Falcon
Eastern Front
Final Legacy
Gato
Hardball
Joust
Lode Runner
Millipede
Moon Patrol
One on One
Pole Position
RS Football
Rescue on Fractalus
Star Raiders 2
Tennis
Thunderfox

I have some hardware,too :

CX-30 Paddles
Joysticks
CX-50 Keyboard Controllers

my email address is webmaster@klassische-videospiele.de

Maybe he didn't originally intend to rip anyone off. Sometimes people
get in over their head, it goes bad and obligations aren't met. I
think most decent people can sympathize.

But someone who over time refuses to make amends or redeem what was
wrong (intended or not), and rather lurks and hides is without honor.

Hi!

On Mon, 3 May 2004 17:34:04 +0200, Music Shop Landgraaf wrote:
> I'm using TurboBASIC to write a directory mover for MyDOS. Problem is,
> there doesn't seem to be a way to detect at which sector a directory starts
> (apart from walking through every directory on a disk/partition to find it).

One solution would be to parse the directory sectors by hand:

As we all know, the root directory starts at sector 361. MyDOS
subdirectories are stored as special entries with a file status
code of $10 and the start sector points to the beginning of
the subdirectory on the disk.

The subdirectory itself is stored in a consecutive 8-sectors block
without sector chaining information and the structure of this
block is exactly the same as for the root directory (i.e. 8 entries
of 16 bytes each in a sector, the upper 128 bytes are unused in
double density mode).

To move a whole subdirectory across the disk you could basically
to the following:

Let's assume you want to move a subdir named "MOVEME" from
D1:DIR1: to D1:DIR2:

1. check if there's still room in D1:DIR2: (less than 64 files) :

1a scan the root directory (sectors 361-368) and search for an
entry named "DIR2:" with file status $10. Get the sector start
of this subdirectory.

1b scan the subdirectory (8 sectors starting from the sector you
just determined) and look for an unused entry. If all 64 entries
are used, bail out with an error message. Otherwise, remember
the free entry number which you will be using for the new
subdirectory.

2. find the directory entry of the subdir "MOVEME":

2a like 1a scan the root directory for "DIR1:"

2b scan "DIR1:" for "MOVEME" with a file status of $10

2c now copy the 16 bytes directory entry to the unused entry
in "DIR2:" which you found in step 1b

2d mark the "MOVEME" entry in "DIR1:" as deleted

BTW: just check if the source and destination directories are
different, otherwise you'll run into problems :-)

so long,

Hias

I'm sure it could but always gets back to the question why.

You have to remember that both the Dataque and Sweet 16 board ran at exactly the same speed as a standard Atari until they were software switched to run in 16 bit mode. 99.9% of all the software out there does not expect a 65816 as it was written before there was an 816 to switch on.

There are obvious benefits of course. A new OS written specifically for the '816 would have a long VBI, perhaps enabling more euro demos to run on US computers. It's just that you have to go from the relatively easy job of adding a few processor instructions to an emulator to the rather esoteric job of rewriting the 10k Atari OS.

Just a few odd points that you are perfectly entitled to ignore if you wish.

#1 For better or worse the USA is a nation of laws. That means even
though lawyers and such can draw up contracts, the only ones that can
resolve issues and enforce them are the courts.

What this means is if there hasn't been a day in court, everything is
just opinion including the opinions of the injured parties. We don't for
instance let people say "FTE didn't deliver me $19.95 in merchandise so
I get Mike's first born son."

Understand when I say this I am not taking sides, I am just stating the
way things work. I have never seen any judgments regarding FTE. IIRC:
Even Newell said something to the effect that it was -his opinion- the
FTE contract with him was unenforcible<in court> because of nonpayment
of royalties. IOW: Mike could take him to court but he believed FTE
would lose.

#2 There has been a number of calls for people to state their grievances
with FTE in public. The list of people that came forward with problems
has always been very thin. I mean if there are thousands of people that
got screwed they certainly haven't come forward around here.

For me it is a math thing. I am a mathematical kind of guy. If there
were thousands of people out thousands of dollars then FTE would have
had (1,000)($1,000) or $1,000,000 in the bank. I don't know that FTE had
that kind of money, I don't know that that didn't. I kind of suspect
they didn't. This leads me to conclude that there weren't thousands of
people out thousands of dollars. It's a common sense issue for me. I
don't think some people have thought that part through.

Not that you shouldn't be MAJOR P.O.ed if you are out a thousand
dollars, just that you don't have a lot of 'out $1,000' company. Not
that a thousand people shouldn't be P.O.ed if they are out a $1, just
that it isn't something that is a huge injury. If you lost your house
because you were a dollar short on the mortgage, well I am sorry for you.

#3 The "I know someone who knows someone who knows someone who said they didn't have an order filled by FTE so that makes it is ok to take anything I want." phenomena.

No you can't. That is why we have laws. The courts make sure it is only an eye for an eye and not "A million dollars because of the trauma I had almost seeing someone else lose an eye."

That is what some of "injured" people in #2 are counting on doing to get even. They are out $20<$2,000 even, just a number> so they want to do $20^n damage to FTE. They know it looks unlikely they will ever see their $20 again so they don't want to see FTE again. Normal human emotion, I have it too, but it isn't the law.

Rick a couple of quick questions for you:

1. Can one do wrong by another, even if they didn't premeditate it?
2. Is it not without honor to make little or no attempt to ever make amends?

Now here are a couple items:

3. In the U.S., it is a crime to take payment for merchandize at the retail level and then not deliver on it. It is not merely a civil matter, but a criminal matter.

4. Numbers 1 and 2 can be a matter of opinion. Number 3 is a fact, not an opinion, regardless of whether or not any proceeding have yet come before the courts or not. If I walk up to you on the street and for no good reason beat you half to death, a crime has been committed. It matters little whether a court ever hears about it or not.

So once again, I can appreciate that Mike may have never meant to stiff anyone. On the other hand, he may have accepted money even at a point when he knew he couldn't deliver the goods. I sure don't know. Regardless, a man of honor would try to repay those people. He would stand up and communicate his intention (and plan) to do so. Otherwise he should declare bankruptcy.

I have no personal score with Mike. It just bothers me to see dishonor defended.

SgtSilicon wrote:

> Rick a couple of quick questions for you:
>
> 1. Can one do wrong by another, even if they didn't premeditate it?

Yes. In the US there are two levels of liability. The strict liability is imposed if there is a premeditation such as you mention. The test for strict liability is ~what would a reasonable person have done. Strict liability is the one where people are entitled to multiples of damages.

For instance<a bad one> someone with no knowledge of snakes lets a rattlesnake go vs. a herpetologist. Both may be liable for actual damages if it strikes someone, but the herpetologist *really* should have known better.

It is one of the catch 22 things about the law. The plaintift lawyer actually argues about how smart the defendant is so they should have known better.

If it ever happens to Mike, I would like a tape of the lawyer accusing him of a great business sense and a being a sharp investor.<grin>
> 2. Is it not without honor to make little or no attempt to ever make
> amends?

All I know is what I hear. One of the reasons Mike is rumored to frequent this forem is to make amends for legitimate claims. That is the reason we sometimes hear a person complain once and never hear from them again. Take it with a grain of salt if you will. I have no direct knowledge of the practice.

Right mostly.

If there was never an intent to deliver merchandise then it would be some level of fraud. If someone just goes out of business through bad business decisions or market forces it isn't criminal.

Really early on a lot of people arrived here to escape debtors prison, as indentured slaves, that kind of thing. As a result we have probably have the most liberal laws for discharging debts in the world. Most of our debts would fall into that <civil> catagory.

AFAIK It has never come to that level. That is Mike would have to file for bankruptcy or someone would have to take him to court and get an award for damages. No Joke: If there has been such a case I would really like to see it. It's like everyone just walked away with all these loose threads dangling.

> 4. Numbers 1 and 2 can be a matter of opinion. Number 3 is a fact,

It's just like we have what seems like 20 levels of murder in the US. Everything from murder one to attempted murder if you happen to be a bad shot.

Typically in California the District Attorney decides if it was a civil or criminal matter and if he feels like prosecuting. I *think* this doesn't happen in that order though. What happens is people file a civil suit to recover damages which lets them do a 'discovery'. If in the process of discovery wrong doing is found, the information is turned over to the DA's office where he makes his decision.

I agree with you on this and it is what I would do myself. From meeting Mike I got the impression he is kind of a private person. That is He would rather clear things up via emails then by a public post. Doesn't bug me that he doesn't do it, just a matter of style to me.
>
> I have no personal score with Mike. It just bothers me to see
> dishonor defended.

Yeah, but when it first happened it seemed more like a witch hunt then just the sad facts. There was kind of feeding frenzy that went on like "Now that FTE has cheated everyone Microsoft will not come out an Atari 8 bit version of Windows!!!" It really was gloom and doom on that level with most fingers pointing towards FTE. There were more negative posts about FTE then there were about the Warner take over of Atari. I mean we need some scale here. I put the Tramiels much higer on my 'screwed up Atari' list then FTE for instance. FTE is on it, but pretty far down on the list.

There were a number of things that FTE did right which were all forgotten. Things like making Sparta DOS freeware, ditto for MAC/65, bug patches, new runs of OSS cartriges, ...

Hi Rick. Thanks for the civil discussion. I suppose around these parts this thread keeps cropping up for one main reason. The reason is most likely a simple sense of frustration coupled with unfairness.

Here you have this community of nostalgic, dedicated hobbyists focussed on Atari 8-bit computer systems. Probably most of the folks are enthusiastic in so far as investing some of their time to the hobby, but not in a monetary or commercially viable way. Some minority might even still be up for spending more than trivial amounts of cash on it.

Now here ya also have this particular product line formerly of ICD and now owned by FTE presumably. A lot of this line is real nifty and has interest by the community mentioned in the preceding paragraph. Folks would like to lay it out there, share it around, develop enhancements and take some great things, make them even better and see that community enjoy using them, even if it means for free. Free because the golden period of commercial viability is passed (or is at least perceived to be by many).

But then you have this guy who owns the copyright to this stuff who, because he (intentionally or not) ripped a fair number of folks off, will not sell these products. Nor will he allow folks to share the stuff around. This essentially means he is cutting the community off from this nifty stuff. I suspect this is frustrating to a number of people in the community. And to add insult to injury, the individual apparently jealously guards his rights (even though most think commercially there is not much point to) after having trampled upon the rights of others. There's the unfairness part.

Long live Atari.

1781. FA: Transdisk IV, MidiMaster, Tari-Talk from Page 6 Software

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-08 21:19:53 UTC
From: PJR <pjr1969@#hotmail.com>
Message-ID: <W9cnc.1762$NK4.135024@stones.force9.net>
Source record: 16138

Hi, I am currently selling three unusual items on ebay by "Page 6
Software" - these are:

Transdisk IV
=========

Transdisk IV automatically transfers to disk single and multi-stage,
commercial machine-code tapes. Transdisk can also handle part/BASIC,
part/machine code games or BASIC only programs. Transdisk is not fooled by
non-standard format tapes which have long or short data blocks to protect
them from copying. After transfer to disk you can enjoy the convenience of
loading and running your cassette software quickly and reliably from an
autoload disk menu. It requires only one keypress to load and run the disk
version of your favourite cassette software in seconds. Transdisk supports
one or two disk drives and single, double or 1050 density on any drive.
Transdisk transfers as many tapes to one disk as there is free space on that
disk and now with enhanced density for 1050 owners or double density for
XF551 owners! Supports ALL available memory on 800XL, 130XE and expanded
800XL's. Easy to use! Transdisk has user friendly menus and on screen
prompts, plus a comprehensive instruction manual. Requires an XL or XE
series computer with at least 64K memory and a disk drive and tape recorder.

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&category=3528&item=8104612349

MidiMaster
========

MidiMaster is a full Midi interface for the Atari 8-bit machines and may be
used with any Midi synthesiser to create or play music. MidiMaster allows
real time recording on an 8-track sequencer and includes a music player for
AMS files, hundreds of which are available in the public domain. Also
included are voice patch editors for Casio CZ and Yamaha DX series synths.
MidiMaster comes complete with a full manual which explains exactly how you
can get your Atari to make music the like of which you have never heard
before!

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&category=3528&item=8104611198

Tari-Talk
======

TARI-TALK is a communications package developed by Martin Bann and PAGE 6
Software that will allow Atari 8-bit owners who have purchased an Atari ST
to transfer files from an Atari 400, 800, XL or XE to the ST. Although
primarily developed for transferring text files TARI-TALK can be used to
transfer all types of file including BASIC programs. TARI-TALK does not of
course convert programs in any way to run on the ST, however it will allow

BASIC programs to be transferred so that the user may convert them as far as possible to run with suitable BASICs on the ST. TARI-TALK contains all you need to transfer any data from an 8-bit Atari to the ST. No further interfaces are required.

You know I used to date a cop and whenever I would explain this same type of reasoning to her, she would get major P.O.ed. You could not believe how imflamed it got her!

I mean I would have thought it a good thing to let all the families of women Ted Bundy killed torture him.

I think all the people who lost their retirement funds because of Enron should be able to go into any former Enron executives house and raid the refrigerator when they feel like it. Heck, they should be able to move into the guest room.

So yes it kind of makes sense and it kind of feels right, but that just ain't the way the powers that be see it. We don't get to decide what is right and what is fair, they do. They kind of view people that think like us as anarchists and they hate anarchy worse then murderer/rapists.

1784. Repairing the Analog "Pocket Reference Card"

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-09 01:05:18 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040508210518.13455.00000087@mb-m06.aol.com>
Source record: 16141

My Analog Pocket Reference Card has definitely seen better days! Some of the folds are about worn through. Any thoughts about what kind of tape (or ?) I might use to repair the worn folds? You used to be able to buy "Mystic Tape" in assorted colors, but I haven't seen any in quite a while. It's got to be flexible and hopefully won't look too awful. ("Silver" Duct Tape is out! :-) Even if I made a new one on card stock, it would still need to be joined at the seams, since the pocket card is approximately 2-2/3 sheets in length. (8-1/2" X 11") Any thoughts?
Larry

It's unfortunate that some of the FTE products appear lost forever. I spent
a considerable amount of time with some of them. The good ole days. ;-)
On a similar note, not long before GFA went bust I attempted to acquire the
rights to GFA-Basic, only to be jerked around by the support guy who took it
upon himself to make sure my e-mails never got to the right people. Funny
thing is I actually was prepared to sink some serious cash into it. Now GFA
appears all but gone and the programs for the Atari ST lost forever that
they made. It's much the same sort of frustration.

Hi Alan-
Clear Duct Tape. I haven't seen or heard of that before. I'll check that out!
Thanks!

P.S. Speaking of 3M tapes, the *best* write-protect labels I've ever used are made from 3M "Tartan" vinyl tape. Definitely available (as tape) in black, and may still be available in many colors. Stays in place, is very flexible, and easily "peelable" from disks for years. (Although will remove paper label surfaces if placed on a label.)

I was just pointing out feelings people may have and why, and how that results in this thread periodically showing up in here; never really dying.

Of course you're right about your examples like the Enron thing etc. The thing is though, it would just be better to hear that Mike screwed people over, isn't real interested in making it right, and anyone who that doesn't sit right with should have filed a police report for fraud against him or try to sue. That's much more realistic than implying no one should be too upset with him because:

- he didn't intend to rip anyone off
- that he is a private kind of guy
- he has made good with a few (couple) people lucky enough to know someone who knows someone

Like I said before, I haven't personally been ripped off by FTE/Mike. I do think it's a shame that the product line (or future of it) has essentially been removed from the community over the whole sordid affair though.

I guess that's all I have to say about it because my words aren't likely to help anyone or somehow convince him to settle this thing so that things can move forward again.

Well, just that you know I combined your quote with my web pages to create
my own sig line below.

If you rather not have that association with my web page (not that it's
implied, really), just let me know and I'll remove your name. I'd still like
to use the quote though :)

Well, there are various tapes out there. I'm curious though... That
self-adhesive lamination is supposed to protect things for years without
yellowing, or otherwise degrading. Perhaps cut strips of it? Or print
the pages out, and laminate them (I've seen lamination available on
rolls, generally in the sewing or crafts area of stores, if you wanted
one continuous piece) or offset individual sheets on each side, to handle
the multiple sheets..

Terry

I'll check that out, too. I wasn't aware of the roll-type -- just "pouches" for individual sheets. Thanks!
Larry

1802. 64k on Atari 400?

Side Note: This is my first post to the Atari 8-bit group, so gerretings to all you 8-bitters out there, and thanks for keeping the 8-bit scene alive!

I was searching the web for upgrades to my 400, and I came across a reference to a "48/64k upgrade for Atari 400" by a Claus Buchholz. Anyone know anything about this upgrade? Is there a 64K upgrade available anywhere for the 400 that I can just purchase?

Call it nostalgia, but I just have a preference for the 400. That, and I like pushing old hardware as far as I can :)

Can anyone help me?

Thanks

I can't help you with the upgrade. I have the same feelings toward
the 400, so you are not alone. One thing I can tell you is that 64k
upgrades for the 400/800 are not compatible with the 800xl/65xe/130xe
64k software, so it will only be good for a ramdisk.

:
: Estimated cost for 10 boards would be $200. ($20 each)

Doesn't this seem a little ridiculous when 6502s can still be had
for under $10?

I think everyone would be happier trying to twist someone's arm (ie
someplace like rocelec.com) into finding, dicing, and packaging some
old 6502 wafers (assuming WDC isn't interested), and having the real thing.

In any case, I probably have well over 100 6502s in my house on arcade
game PCBs, and that's a much bigger market than retro PCs...

Yes, it would be ridiculous if all it gave you was a 6502.
This card gives you a 65802 which is a superior chip.

I actually have a 65802 I bought many years ago. It let me run Merlin 16
on my IIe clone.

Maybe the subject line should say "16-bit 6502 upgrade" instead
of "16-bit 6502 replacement", even if the design doesn't provide
possibility to take advantage of *all* the 65816 features AFAIU.

Btw, how common is it that the CPU breaks down in an old computer,
arcade game or otherwise? From what I've understood, it is custom
chips and maybe memory chips that seem to die first.

Welcome to the comp.sys.atari.8bit newsgroup!

You've found the Usenet newsgroup for discussion about the Atari 8-bit
family of computers! These include the 400, 800, 1200XL, 600XL, 800XL,
65XE, 130XE, 800XE, and the XE Game System. Atari (based in Silicon Valley,
California, USA) produced this line of computers from 1979-1992.

To see what Atari is up to today visit http://www.atari.com/

NEWSGROUP BACKGROUND:
comp.sys.atari.8bit was created in November 1986, and is unmoderated.
There is no charter for comp.sys.atari.8bit. (It pre-dates that custom.)
This newsgroup was known as net.micro.atari8 from Feb 1986 to Nov 1986.
The earlier net.micro.atari existed from Nov 1982 to Nov 1986.

Please don't try to post binaries in comp.sys.atari.8bit, use the appropriate
binaries groups instead.

I have BIG BIG problems in running rainbow136freeware

I've the following setup

amd 1800xp+proc
1/2 gig SDram
80+40gig h/d
the 80gig h/d is partitioned with win 98se on drv c
and win xp pro/corp ed. on drv e

both o/s have updated nvidia tnt2m64 drivers
both o/s have dir x 9

on win xp I back click on the rainbow exec. and click
on compataBILITY TAB

I select run at 256 colour mode

I copy over the roms I used for Atari 800 win plus,
renaming as specified into the same directory as
rainbow

all i get is cannot find OP_SYSXL, OP_SYS 400 etc

I also get this with win98se

is it possible that you could assist here

yours Atarily

Hi,
You could probably change the rom names to OP_SYSXL for atarixl.rom and
OP_SYS 400 for atariosb.rom not for sure though. I only used
rainbow136freeware for a few days before deciding to uninstall this
emulator. Good Luck

That's correct - the names of the roms must be OP_5200, OP_BASIC, OP_SYSXL,
etc. The README.TXT with Rainbow spells out the names.

At least for the Atari 8 bit computers it is fairly common. A bad batch
of 6502C processors from Rockwell/Mexico made it into their production
runs in the early 80s. It isn't the leading cause of death, but in the
top 5.

1820. Re: game makers for atari 8 bit ?

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-11 16:08:36 UTC
From: Andreas Magenheimer <magea000@students.uni-mainz.de>
Message-ID: <40A0FA84.C4FB52DD@students.uni-mainz.de>
Source record: 16027

Hmmm,
I think the following game-makers produce "independant" programs:

- the Arcade Machine (by Broderbund), creates bootdisks that can be loaded without Basic (I have some games made with it, like Megablaster, C64-Invaders, Stonetime People, etc.)

- Pinball Construction Kit (by Electronic Arts, available as NTSC/Gr. 8 version with artifacting colors only and PAL/Gr. 15 version with 4 colors), this one produces disk-files, each with a length of 242 sectors; I have filled 8-12 disksides with freely available pinball games (all packed with Bewesoft`s Superpacker, to save some space)...

- the Wargame-Construction-Set (by SSI) should also produce independant / stand-alone games, but since I never owned it, I am not pretty sure about it...

- Robbo Construction-Kit (by LK Avalon), allthough I never owned it, I already have lots of stand-alone Robbo disk-files (Robo games, with alternative levels); maybe the constructor creates these files - or some clever people knew how to do it (like with the Boulder-Dash-Construction Kit: it does not produce stand-alone files, but some hackers were able to do so)...

- The Game-Designer`s Workshop (by KE-Soft), a very simple Turbo-Basic program, that contains lots of fonts/character-sets and other stuff, so you can create your very own (TB-XL, I guess) game-program; alas, the docs are only available in form of a german book and the games that can be produced with this application look like 20 year old Basic type-in listings...

- The Wizard-Adventure-Creator program (PD by ???), a program that lets you create your own text-adventure; all you have to do is create a list with rooms, objects, etc. and the program will create the text-adventure for you...

- The Adventure-Creator (cart. by Spinnaker), this program also lets you create text-adventures; since I do not own it, I cannot tell anything about it...

Well, that`s what I do remember about the commercial stuff - I guess all the other programs only create maps or levels that have to be used with the original program then. But there are also lots of PD game-makers (where the games and the editors are Public Domain, so it does not matter if you have to own the original game, since it is also PD). Thats what I do remember right now:

- Kitten + level editor
- (Basic) Boulder-dash + level editor
- Dandy + level editor
- Aliens + level editor
- The Wall + level editor
- Brik-Bat + level editor
- Sokoban + level - editor
- Socoban + level editor
- Think & Work + level editor

and many many more (comments, enhancements, etc. welcome!)...greetings,
Andreas.

Yep,
this is one. Produces stand-alone games. Alas, the ones that are
available right now are not that good... And er, the program itself
seems to be quite complicated , compared to the games, that can be
created with it... but anyway... -Andreas.

Source record: 16029

Well,
I think you are right in many points, except point 2, maybe. Imagine 1000 people registering / buying spartaDOS - the official registration fee was 20 Dollars, So that would be 20,000 dollars then (not one million dollars). I am not sure right now what the prices for Basic XL, Basic XE, Action, Mac 65 and/or the Mars8 enhancement were, but surely less than 1000 dollars each. so, imagine again 1000 people, where some bought / wanted to buy / payed for SpartaDOS registration, some payed for Basic XL, others for Basic XE, etc. (and some payed for more than one program), so that would be approx. 20,000 - 50,000 or maybe up to 100,000 dollars and still not one million dollars...

And thats what people/atarians are mostly angry about - not the 20+ dollars they paid for one single program, but the 20,000 to xx,000 dollars Mike earned when he decided to "run away"... The problem for me and why I am not judging Mike Hohman or hiring a lawyer to take him to court, is simple: I am sitting in Germany. I paid 20 dollars for SpartaDOS registration. Hiring a lawyer costs a little bit more than 20 dollars... and I guess some more Atarians have the same thoughts...
-Andreas.

Hello,

Through the generousity of a fellow Atarian,I have a Supra?KP HD interface.
As life often does,there is a fly in the ointment!
I am unable to read the disks containing the documentation, and a search
here finds little useful information.

Does anyone have any docs on this interface or a contact for Bob Klaas?

Please help,as I am already grey-headed and I fear the frustration
may be fatal!

Ed

1824. Atari magazines, books & hardware for sale

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-11 20:53:28 UTC
From: GarageSalez <info@garagesaleznospamplease.us>
Message-ID: <mgd2a0lo48034i9tq9ktdnqe9c9v9fegrj@4ax.com>
Source record: 16031

8-bit and early 16-bit magazines and books for sale at:
http://garagesalez.us/

My books are listed in the right hand column at:
http://garagesalez.us/ataribookamz-2.html

Also included are links to several Atari resources.

==========

Previously I had announced that I would also have hardware for sale on that site and several people requested that I email them when the hardware section is ready. Well, plans have changed. That stuff belongs to my brother and our collaboration isn't working out (largely due to the fact that he doesn't have any idea what he wants to price things at). I suspect that you could get a pretty good deal on most/all of it.

He has several boxes of hardware and software. Some of the items are:

800 XLs
520 STs
130 XE - still in the box
monitors
floppy drives (8 & 16 bit)
850 interface
MPP modem
Koala Pad
power supplies
cables
accessories (joysticks, etc)
books
magazines
games
applications

That's as much as I recall. I know that he doesn't have any hard drives and his 16-bit stuff is all early (well, not real early... I recall having to load TOS from a floppy... his aren't that early).

If you send me either an offer or an inquiry at info@garagesalez.us, I'll pass the information along.

Most of those IIe can be replace by WDC 65c02s processors just fine. Look forward to picking them up but the WDC parts rarely fail. The NES ones are just fine. #1 problem the NES had was the "cartridge apparatus" thing. I replaced the apparatus once and voila the NES was alive just fine. The 65c02 chips are very long living chips and are among the most reliable in the world.

Sorry for being such a bore but as no-one seem to help me last time I
thought I'd better repost or a better solution

I STILL have BIG BIG problems in running rainbow136freeware

I've the following setup

amd 1800xp+proc
1/2 gig SDram
80+40gig h/d
the 80gig h/d is partitioned with win 98se on drv c
and win xp pro/corp ed. on drv e

both o/s have updated nvidia tnt2m64 drivers
both o/s have dir x 9

on win xp I back click on the rainbow exec. and click
on compataBILITY TAB

I select run at 256 colour mode

I copy over the roms I used for Atari 800 win plus,
renaming as specified in the rainbow manual into the same directory
as
rainbow

all i get is cannot find OP_SYSXL, OP_SYS 400 etc (which is what
rainbow tells me to call the files)

I also get this with win98se

is it possible to assist here, or at least supply me a set of roms,
or clearer instructions on how to get the emulator running

Small point: Everyone got the product, it was freeware. What
registration was supposed to get you was a manual. IIRC The manuals were
brand new from the original ICD printing run and fairly desirable.

1836. FA/FS/FT : Many boxed+new XL/XEGS Cartridges

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-13 05:18:55 UTC
From: webmaster@klassische-videospiele.de
Message-ID: <d0c5424f.0405122118.1cca5f90@posting.google.com>
Source record: 16043

Hi,

I still have many boxed+new ATARI 800 XL/XE cartridges which I want to
sell or trade.

The games are NTSC versions with English instructions.The games work
on PAL machines, too, although Lode Runner & Midnight Magic will be
without colors on PAL machines (no artifacting on PAL systems).

You may buy them on ebay :

http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&include=0&userid=klassische-vi
deospiele&sort=3&rows=25&since=-1&rd=1

But I can sell the games withou ebay,too.

Trading is possible, too ; I will trade for ATARI 2600/7800, ATARI XL,
ATARI ST, C64, AMIGA, MS DOS, Nintendo, Colecovision, Intellivision ,
ATARI Lynx etc. games.

I have :

Archon (picture : www.vectrex.de/c/archon.jpg)
Ballblazer (picture : www.vectrex.de/c/ballblaz.jpg)
Crossbow (picture : www.vectrex.de/c/crossbow.jpg)
Final Legacy (picture : www.vectrex.de/c/finleg.jpg)
Gato (picture : www.vectrex.de/c/gato.jpg)
Hardball (picture : www.vectrex.de/c/hardball.jpg)
Joust (picture : www.vectrex.de/c/joust.jpg)
Millipede (picture : www.vectrex.de/c/millikl.jpg)
One on One Basketball (picture : www.vectrex.de/c/oneonone.jpg)
Pole Position (picture : www.vectrex.de/c/polexl.jpg)
Star Raiders 2 (picture : www.vectrex.de/c/starrai2.jpg)
Tennis (picture : www.vectrex.de/c/tennisxl.jpg)
Thunderfox (picture : www.vectrex.de/c/tfox.jpg)

and Mickey in the Great Outdoors on disk (picture :
www.vectrex.de/c/mickey.jpg)

I also sell these XEGS/XL cartridges :

Ace of Aces (picture : www.vectrex.de/c/aceofaces.jpg)
Airball (picture : www.vectrex.de/c/airball.jpg)
Crime Buster (picture : www.vectrex.de/c/crimebu.jpg)
Davidï¿½s Midnight Magic (picture : www.vectrex.de/c/davidmm.jpg)
Desert Falcon (picture : www.vectrex.de/c/desertxl.jpg)
Eastern Front 1941 (picture : www.vectrex.de/c/eastern.jpg)
Lode Runner (picture : www.vectrex.de/c/loderun.jpg)

Moon Patrol (picture : www.vectrex.de/c/moonxl.jpg)
Rescue on Fractalus (picture : www.vectrex.de/c/rescue.jpg)
RealSports Football (picture : www.vectrex.de/c/rsfoot.jpg)

I may ship worldwide, shipping depends on the final weight - you only
have to pay shipping if you buy games, not if we do a trade.

I can accept PAYPAL.

If youï¿½re interested, please write an email to me.

My email-address is webmaster@klassische-videospiele.de
or lord-chaos@t-online.de

I have an Indus drive and the RamCharger CP/M utility disks but no RamCharger board. Anyone know what this board contained? I would love to build a homebrew version and kick the drive into Z80 computer mode!

Was it just 64K of RAM and some associated logic or was it intelligent in any way?

Thanks
Jerry

(Incidentally, RamCharger or Ram Charger?)

I know this is not what you want to hear, but I think this is the best thing
you can do:

do NOT use that emulator. In it's days it was ok, but now we have MUCH
better emulators; like the (almost perfect) Atari800Win+

http://atariarea.histeria.pl/PLus/index_us.htm

I am NOT an emulator lover. I prefer the real thing most. But in case of no
real thing available, this Atari800Win+ is a worthy substitute!

I agree, I could always find something wrong the Atari 8bit emulators,
but Atari800win actually feels like an 8bit. I even sold one of my
8bits after I tried it.

Thought I might ask here.

I am cleaning up my stash of books. I have some rather esoteric stuff like 74LS data books, Motorola 68000 processor book, maybe even a Motorola 6800<before there was a 6802-9!> micro book.

Shipping on books is a flat rate in the USA, something like $3 no matter what size. For a lot of the books, I don't think I paid that much to buy them in the first place. The logic families are somewhat obsolete with new PGA stuff available. If anyone wants to pay shipping for them, get me an email.

Hello russg & all,

In an early issue of ROM magazine (Canadian) there was details on how
to build a simple cable to connect the ST serial port to the 8 bit
joystick port and transfer files at a low baud rate (300,I think)
IIRC,it was issue #3.

Here is what I experienced with FTE......

Back when they released the SDX v.4.22 upgrade ROM, I ordered it. When
it arrived it didn't work.

I called FTE and told them about the problem, I sent the ROM back to
them and waited and waited for
a return. Finally after 2 months or more I sent them a letter stating
that if I didn't get a working ROM I would
make sure alot of Atari 8bit users would know about their business
practices. A Brand new SDX cart v.4.22
arrived by priority mail soon after sending the letter. I then called
FTE and thanked them. They did state
that they had been very busy.

But, a friend of mine was having problems with his MIO and he sent it to
FTE to see if it could be
fixed and what the cost would be. Months past by and he was told that
the MIO couldn't be fixed or
would be to costly to fix. I believe they offered to sell him another
one.
He asked for his MIO back and I told him to send it to me. The only
problem with that MIO was the
cable connection that you connect to the 800xl or 130xe adapter was
loose.

All that had to be done was to take the end off the ribbon cable and
snip a few inches off and replace the
end. Worked fine after that. We couldn't figure out how anyone that
really looked at that MIO could
have missed that simple repair. The guy was without his MIO for around 4
months or more over a
simple cable connection problem.

I guess it could have been overlooked.

Did anyone else reading this send FTE MIOs or other ICD products to be
fixed? If so any problems?

Hello All,

From 14-17 May, we are pleased to offer our Atari 8-bit CD-ROM commercial software collection for an amazing US$5 including shipping!

This CD includes most of our commercial software products on a CD-ROM. All software is in both ATR and DCM format, with original manuals in PDF format. They can be run in 8-bit emulators, or copied over to disks for running on the Atari (extra hardware/software required for this).

Your $5 will get you full versions of the Quick programming language (with support disks), SAM 80-col desktop system (with utility disks), Digi-Studio digitized music package, Print-Filer print image utility, 26 issues of our old magazine, a selection of PD disks from our library, a 22 minute video (in MPEG1 format) of the AMS96 show held in the UK, 4 commercial games, an advanced character set editor utility, and more!

You can buy a copy right now using any credit/debit card (through PayPal), from our web site (full product details are there too): http://www.dgs.clara.net

You can grab it here:
http://www.slor.net/upjoy.zip

It's designed as a joystick driver for Win 3.1, so I don't know how well
it will work with a newer OS.

1854. FA: Atari 130XE Complete

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-14 16:55:22 UTC
From: Slor <slor@comcast.net>
Message-ID: <Xns94E97948EBBDFslorcomcastnet@130.133.1.4>
Source record: 15961
Cross-posted to: comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.classic,rec.games.video.marketplace

In my recent dealings, I managed to end up with a spare 130XE. It includes standard hookups, power supply, manual, and box. About 36 hours remain on the auction:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=4130642138

Thanks!

Hello Dan,

I have an old Dell Pentium 100 set up just for Atari emulation,under
MS-DOS.I use PCXformer 3.8 with good results.
You can find it at www.emulators.com

1856. Atari 8-bit $5 CD-ROM (can now buy in UK pounds too)

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-15 10:25:17 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <1084616701.22479.0@damia.uk.clara.net>
Source record: 15963

Hello All,

Further to our post of yesterday, we can now accept payment for our Weekend special priced CD-ROM in UK pounds for UK buyers (2.75pounds).

Here's a repeat of yesterday's post if you missed it:

From 14-17 May, we are pleased to offer our Atari 8-bit CD-ROM commercial software collection for an amazing US$5 including shipping!

This CD includes most of our commercial software products on a CD-ROM. All software is in both ATR and DCM format, with original manuals in PDF format. They can be run in 8-bit emulators, or copied over to disks for running on the Atari (extra hardware/software required for this).

Your $5 will get you full versions of the Quick programming language (with support disks), SAM 80-col desktop system (with utility disks), Digi-Studio digitized music package, Print-Filer print image utility, 26 issues of our old magazine, a selection of PD disks from our library, a 22 minute video (in MPEG1 format) of the AMS96 show held in the UK, 4 commercial games, an advanced character set editor utility, and more!

You can buy a copy right now using any credit/debit card (through PayPal), from our web site (full product details are there too): http://www.dgs.clara.net

I did the 48K upgrade to my 400 back in 1985. As I recall, 64K upgrades were not practical because the operating system and cartridge used that memory space, so going beyond 48K required significant extra logic to swap memory pages.

Well, this was the key. 10k resistors were too much though, APE couldn't see any command activity on the interface when I put 10k on pins 5 and 7. But when I dropped that to 3.3k (the next value I had handy) everything started working fine.

Thanks for the suggestions.

I never sent anything to be fixed.

I did buy a 4.22 ROM, which arrived and worked fine.

I also registered 3.2g, which I believe resulted in receiving disk(s) and
ICD's printed instructions, also all fine.

I think that was all my business with FTe. So to me the business seemed up
and running ok at least for a while..

1862. Anyone remember these two fairly obscure games?

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-16 07:38:02 UTC
From: Jerri Kohl <spinavision@netscape.net>
Message-ID: <40A71B20.1090103@netscape.net>
Source record: 15969

I have fond memories of two games that I can't seem to locate in all of the games out there on the 'net for emulators. Any help would be greatly appreciated.

I had two games for my Atari 8-bit that I can't remember the name of. They were both created by the same small company, had an overhead view scrolling map view (ala above ground in Ultimas), played in realtime with a joystick, and also were developed in BASIC IIRC. The one took place in a setting that primary (only?) included a cemetary and had you fighting/fleeing undead. The other was a fantasy or medieval setting that included the Black Forest, in which lived a crazy man whom you could fight and perhaps talk with as well.

Boy, if this isn't a shot in the dark! ;) I'll be extremely impressed if someone can name these games based on these descriptions.

Thanks,
Jerri Kohl

6.11) What sound-digitizers/samplers were produced for the Atari?
6.12) What sound-enhancement upgrades were produced for the Atari?
6.13) What MIDI enhancements are there for the Atari?
6.14) What graphics enhancements are there for the Atari?
6.15) What types of memory upgrades are there for the Atari?
6.16) What networking hardware is there for the Atari?
6.17) Can I attach an ISA card to the Atari?
6.18) What preventative maintenance can I do on my Atari system?

Core software: OS, BASIC, DOS, Modem handlers
7.1) What versions of the Atari Operating System (OS) are there?
7.2) What is the ATASCII character set?
7.3) What is Atari BASIC?
7.4) What are Atari DOS 1, DOS 2.0S, DOS 3, DOS 2.5, and DOS XE?
7.5) What are MyDOS, SpartaDOS, and other popular DOS versions?
7.6) How do I modify Atari DOS to support more than two drives?
7.7) Are there Graphical User Interfaces (GUIs) for the Atari?
7.8) What should I know about modem device handlers?

Software
8.1) What programming languages are available for the Atari?
8.2) What cartridges were released for the Right Slot of the 800?
8.3) What games support 4 or more simultaneous players?
8.4) What programs run only on the 400 and 800 models, and why?
8.5) What programs make use of the Light Gun or a light pen?
8.6) What programs have a track ball mode or support a mouse?

8.7) What programs have a paddle(s) or Koala Pad mode?
8.8) What programs have a CX85 Numerical Keypad mode?
8.9) What programs have a Touch tablet mode?
8.10) What kinds of RAMdisks can be set up on the Atari?
8.11) What programs support a RAMdisk?
8.12) What programs require a RAMdisk?
8.13) What voice/sound synthesis software is there for the Atari?
8.14) What programs support stereo and upgraded sound?
8.15) What games support online action via modem?
8.16) What programs support Atari computer networking?

Working with Atari files: Compression, File formats, Copying
9.1) How can I work with .arc files on my 8-bit Atari?
9.2) What file formats for entire disks/tapes/cartridges are there?
9.3) How can I copy my copy-protected Atari software?

Interoperating with "modern" computers
10.1) What programs can log in to other computers via modem?
10.2) What programs can I use to host a BBS on the Atari?
10.3) How can I read/write Atari disks on an MS-DOS PC?
10.4) How can I read/write MS-DOS PC disks on my Atari?
10.5) How do I transfer files using a null modem cable?
10.6) How can my Atari use my PC's HD using SIO2PC or Atari810?
10.7) How can my Atari use my PC's HD, printer and modem using APE?
10.8) How can I connect my 1050 drive to my PC with the APE ProSystem?
10.9) What about interoperating with the Apple Macintosh?
10.10) Are there 8-bit Atari tools for the Commodore Amiga?

Timeline
11.1) How did Atari get its name?
11.2) What is the History of Atari?

Subject: 1.1) What is an Atari 8-bit computer?

Based in Silicon Valley in the U.S.A., the company known as Atari produced a line of home computers from 1979 to 1992 often referred to collectively as the "Atari 8-bits," the "8-bit Ataris," the "400/800/XL/XE series," etc.

The computers included the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

These machines competed in the marketplace most directly with the likes of the Commodore 64 series, the Apple II series, the Texas Instruments TI99/4A, and the Radio Shack Color Computer, among others. Of these, the 8-bit Atari is most similar to the Commodore 64.

In marketing their computers to the public, Atari always had to contend with their company history and reputation as a maker of video games. While the 8-bit Atari computers in their heyday were technically quite comparable if not superior in the worlds of home and business personal computing, they also live up to the name "Atari" with a huge library of video games which were often

outstanding for their time.

The 8-bit Atari computers do not use the same cartridges or floppy disks as any other Atari platforms, such as the 2600 Video Computer System (VCS), the 5200 SuperSystem, the 7800 ProSystem, or the ST/TT/Falcon computers. All of these but the 5200, however, do share the same joystick/controller hardware port.

The 5200 SuperSystem is actually nearly identical to the 8-bit computers internally, yet cartridges for the 5200 and the 8-bit computers cannot be exchanged, primarly due to the physically different cartridge ports.

Here are some of the performance specifications of the 8-bit Atari computers:

(Some of the rest of this section by Bill Kendrick)

CPU: 6502 (MOS Technology)

CPU CLOCK SPEED:
NTSC machines: 1.7897725 MHz
non-NTSC machines: 1.773447 MHz

SCREEN REFRESH RATE:
59.94 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

GRAPHICS MODES:

ANTIC Mode #	CIO/BASIC Graphics #	Type	Display Resolution (full screen)	Number of Colors
2	0	Char	40 x 24	1 *
3	-	Char	40 x 19	1 *
4	12	++ Char	40 x 24	5
5	13	++ Char	40 x 12	5
6	1	Char	20 x 24	5
7	2	Char	20 x 12	5
8	3	Map	40 x 24	4
9	4	Map	80 x 48	2
A	5	Map	80 x 48	4
B	6	Map	160 x 96	2
C	14	++ Map	160 x 192	2
D	7	Map	160 x 96	4
E	15	++ Map	160 x 192	4
F	8	Map	320 x 192	1 *
F	9	+ Map	80 x 192	1 **
F	10	+ Map	80 x 192	9
F	11	+ Map	80 x 192	16 ***

* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16
luminances x 16 hues = 256 colors. (Four registers are for player-missile
graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse
video incarnation, are totally redefinable.

PLAYER-MISSILE GRAPHICS: (byte height and OR corrections from Piotr Fusik)
Four 8-bit wide, 120 or 240 byte high single color players, and four
2-bit wide, 120 or 240 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to OR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display
List - a program which is executed by the ANTIC graphics chip every
screen refresh:

All other screen attributes (color, player/missile horizontal position,
screen width, player/missile/playfield priority, etc.) can be ajusted
at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any
line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

Subject: 1.2) What is the Atari 400?

Released along with the 800 in 1979, the 400 was the low-end model of the two.
The only 8-bit Atari with a membrane keyboard rather than a full-stroke
keyboard. One of the few 8-bit Ataris lacking a composite monitor port.
Originally released with just 8K RAM, but most were sold with 16K RAM. Atari
sold the Atari 400 48K RAM Expansion Kit, which required a little soldering,
to dealers only.

Only the 400 and 800 8-bit Atari models have four controller (joystick) ports.

Early 400 units include the CTIA chip; later units include the GTIA chip, also
present in all later 8-bit Ataris.

The 1982 Atari catalog calls the 400 "The Basic Computer."

The 400 was discontinued in 1983.

During development the 400 was known internally as "Candy."

Subject: 1.3) What is the Atari 800?

Released along with the 400 in 1979, the 800 was the high-end model of the two. The 800 is the only 8-bit Atari with a Right Cartridge slot, in addition to the Left Cartridge slot as present on all 8-bit Ataris. Originally released with just 8K RAM, many were sold with 16K, later on 48K was standard.

The 800 is also the only 8-bit Atari with a four-slot modular design, where the first slot holds the CX801 (CX801-P for PAL machines) 10K ROM module, and the other three slots hold combinations of CX852 8K or CX853 16K RAM modules.

Jason Harmon writes: (12 Feb 2004)
"..the early ones had plastic cases on the ROM and RAM modules, and had two thumb tabs to remove the cover to access the modules. Later model 800s had 48K standard, and to improve cooling Atari installed them without the cases but put a small plastic strip across the tops of the cards to hold them in position. These machines also lost the thumb tabs and have regular screws to secure the cover over the memory slots."

Only the 400 and 800 8-bit Atari models have four controller (joystick) ports.

Early 800 units include the CTIA chip; later units include the GTIA chip, also present in all later 8-bit Ataris.

The 800 was discontinued in 1983.

During development the 800 was known internally as "Colleen."

Subject: 1.4) What is the Atari 1200XL?

Released as a big brother to the 400/800 in 1982, the 1200XL now uses Atari's slightly customized 6502C microprocessor, and includes a full 64K RAM. The 1200XL was the first 8-bit Atari with just 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, 4 LEDs, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

The 1200XL was the biggest single step forward in development of the 8-bit Atari platform, but the corresponding software compatability problems hurt its popularity.

The 1200XL lacks separate chroma video signal, and also lacks the +5 Volts power on pin 10 of the SIO port.

There is no PAL (European) version of the 1200XL.

The 1200XL was discontinued in 1983.

Subject: 1.5) What is the Atari 600XL?

Released in 1983 as a replacement for the 400, the 600XL is the low-end version of the 800XL. The 600XL/800XL include most of the features of the 1200XL minus the Function keys and the demo program. But both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing fast parallel access to the heart of the computer. The 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the Atari 1064 Memory Module.

Rarely, some late-model 600XLs were sold with 64K RAM. These may have only appeared in Canada. The box had a round gold foil sticker reading: "64k Memory -- Now with a full 64k of memory built-in."

Normally boots with Atari BASIC (Revision B) enabled; Hold down [Option] on startup to boot without BASIC.

The North American/NTSC 600XL does not include a composite monitor port; The European/PAL 600XL includes the monitor port, but this lacks the chroma video signal.

The 600XL was discontinued in 1985.

Subject: 1.6) What is the Atari 800XL?

Released in 1983 as a replacement for the 800 and 1200XL, the 800XL is the high-end version of the 600XL. The 600XL/800XL include most of the features of the 1200XL minus the Function keys and the demo program. But both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing fast parallel access to the heart of the computer. The 800XL contains 64K RAM.

Normally boots with Atari BASIC (Rev. B, or late models with Rev. C) enabled; Hold down [Option] on startup to boot without BASIC.

The 800XL lacks separate chroma video signal (exeception next paragraph).

There was a late version of the 800XL in Europe, called 800XLF. The 800XLF includes a redesigned motherboard (the XE design) and contains FREDDIE for memory management and has chroma output. BASIC is Revision C.

Though Atari never disclosed sales figures, the 800XL was likely the most-sold of all 8-bit Atari computer models.

The 800XL was discontinued in 1985.

Subject: 1.7) What is the Atari 65XE?

Released in 1985 as a replacement for the 600XL, the 65XE is the low-end version of the 130XE. The 65XE is nearly identical to the 800XL in features, minus the PBI. Many European (PAL) 65XE's include the ECI port, but no North American (NTSC) 65XE's include the ECI port. All XE computers also include the FREDDIE memory management chip.

Normally boots with Atari BASIC (Revision C) enabled; Hold down [Option] on startup to boot without BASIC.

The 65XE was discontinued in 1992.

Subject: 1.8) What is the Atari 130XE?

Released in 1985 as a replacement for the 800XL, the 130XE is the high-end version of the 65XE. The 130XE offers 128K RAM, plus the FREDDIE memory management chip, supporting the unique (but rarely used) ability for the 6502 and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface (ECI), continuing the powerful feature of a fast parallel port.

Normally boots with Atari BASIC (Revision C) enabled; Hold down [Option] on startup to boot without BASIC.

The 130XE was discontinued in 1992.

Subject: 1.9) What is the Atari 800XE?

Unseen and unknown in North America, the 800XE was sold in eastern Europe. The 800XE is identical in features to the European version of the 65XE, including the ECI port. The 800XE could also be described as a 64K version of the 130XE.

Normally boots with Atari BASIC (Revision C) enabled; Hold down [Option] on startup to boot without BASIC.

Jindrich Kubec writes, "The problematic Chinese 800XEs with GTIA problems were manufactured in 1992."

The 800XE was discontinued in 1992.

Subject: 1.10) What is the Atari XE Game System?

In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE. It was packaged with the Light Gun, and the Flight Simulator II and Bug Hunt cartridges.

Keyboard connected/no cartridge:
boots to Atari BASIC
Keyboard connected/no cartridge/[Select] held down at startup:
boots to Missile Command
No keyboard connected/no cartridge:
boots to Missile Command
No keyboard connected/no cartridge/[Select] held down at startup:
boots from disk drive
No keyboard connected/no cartridge/[Select]+[Start] held down at startup:
boots from tape drive

[Option] held down at startup = BASIC on
[Option] not pressed at startup = BASIC off
(opposite from all other XL/XE machines)

Andreas Magenheimer writes:
Tip: The confused XEGS Atarian should use the XEGS manager by Mat*Rat
(Mathew Ratcliff). This assumes one knows at least how to boot a disk
with the XEGS...

James Bradford offers:
There is only 1 32K ROM in the XEGS, it has the OS, BASIC (Rev C) and
Missile Command on it.

The XE Game System was discontinued in 1992.

Subject: 1.11) What are the 6502, ANTIC, CTIA/GTIA, POKEY, and FREDDIE chips?

Some of the following text is taken from De Re Atari (Atari#APX-90008), a book
published by Atari through the Atari Program Exchange (APX) and copyright 1982
by Chris Crawford, et al. See http://www.atariarchives.org/dere/ where the
full text of De Re Atari is now available online.

The internal layout of the Atari 8-bit computer is very different from other
systems. It of course has a microprocessor (a 6502), RAM, ROM, and a PIA.
However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA,
and POKEY. These chips were designed by Atari engineers primarily to take
much of the burden of housekeeping off of the 6502, thereby freeing the 6502
to concentrate on computations. While they were at it, they designed a great
deal of power into these chips. Each of these chips is almost as big (in terms
of silicon area) as a 6502, so the three of them together provide a tremendous
amount of power. Mastering the Atari 8-bit computers is primarily a matter of
mastering these three chips.

6502 Central Processing Unit (CPU)
====
While the 400/800 models contain a generic 6502B CPU (a faster version of the
original 6502A microprocessor), all of the XL/XE models contain Atari's
customized 6502C chip.

On the Atari, there are two microprocessors, ANTIC and the 6502. To allow
them to coexist, ANTIC must shut off the 6502, a process called DMA. The

6502B supports DMA, but in Atari's implementation, it required 4 chips. The 6502C has an extra line called HALT. It is controlled by ANTIC which uses it whenever it needs the data/address bus. The HALT line is on pin 35 of the Atari 6502C and must be pulled high for the chip to work.

ANTIC
=====
ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

Frank Schuster writes (6/1/02):
the patent for the ANTIC processor:

U.S. Patent 4,296,476 October 20, 1981 for a "Data processing system with programmable graphics generator". Inventors listed: Steven T. Mayer; Jay G. Miner; Douglas G. Neubauer; Joseph C. Decuir

CTIA/GTIA
=========
CTIA ("Color Television Interface Adapter") / GTIA ("George's Television Interface Adapter") is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missile graphics, and collision detection.

Early 400/800 models included CTIA, later 400/800 models and all later 8-bit Ataris included GTIA.

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Clay Halliwell provides this tidbit:
A bit of trivia: CTIA 400/800s artifact in blue/green, GTIA 400/800s artifact in green/blue, and all XL/XEs artifact in red/blue.

Jerry Jessop explains why French Ataris produce fewer colors:
I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in 80-84 sales of these items there were not possible.

Frank Schuster writes (6/1/02):
..here a summary of Atari patents covering technical parts of the GTIA / CTIA or at least the steps of development to it. I found them by following the references made in the "newest" patent 4,324,401 which at the end stands for the GTIA.

U.S. Patent 4,324,401 April 13, 1982 for a "Method and system for generating moving objects on a video display screen". Inventors listed: David R. Stubben, Lyle V. Rains. References: 4,116,444; 4,107,665

U.S. Patent 4,189,728 February 19, 1980 for an "Apparatus for generating a plurality of moving objects on a video display screen utilizing associative memory". Inventor listed: David R. Stubben. References: 4,116,444; 4,045,789

U.S. Patent 4,116,444 September 26, 1978 for a "Method for generating a plurality of moving objects on a video display screen". Inventors listed: Steven T. Mayer; Ronald E. Milner. References: 4,016,362; 3,793,483

U.S. Patent 4,107,665 August 15, 1978 for an "Apparatus for continuous variation of object size on a raster type video screen". Inventors listed: Steven T. Mayer; Ronald E. Milner

U.S. Patent 4,045,789 August 30, 1977 for a "Animated video image display system and method". Inventor listed: Stephen D. Bristow. References: 3,793,483

U.S. Patent 4,016,362 April 5, 1977 for a "Multiple image positioning control system and method". Inventors listed: Stephen D. Bristow; Steven T. Mayer. References: 3,793,483

U.S. Patent 3,793,483 February 19, 1974 for a "Video Image Control System for Amusement Device". Inventor listed: Nolan K. Bushnell

POKEY
=====
POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The USPTO granted U.S. Patent 4,314,236 to Atari on February 2, 1982 for an "Apparatus for producing a plurality of audio sound effects" - POKEY. Inventors listed: Steven T. Mayer, Ronald E. Milner

FREDDIE
=======
The 65XE/130XE/800XE/XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to James Bradford, "FREDDIE is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. FREDDIE also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a FREDDIE but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from FREDDIE, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to FREDDIE for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say FREDDIE does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO FREDDIE) and an extra 8 RAM chips."

And more recently James Bradford has written:
FREDDIE is just a memory decoder and timer. It replaces several chips in the 800XL. The small chip near FREDDIE does all the bank selection. CO25953. One line from FREDDIE, Ras (or is it cas?) goes to this chip, Halt and the bank /processor select lines go into this same chip and ras (cas?) comes out. A pin for each bank. If I remember correctly, refresh also goes into this small chip. It would be quite easy to make an 800XL work just like a 130XE with this chip since Ras (Cas?) is required by ALL dynamic RAM.

======
Technical data sheets and schematics for the ANTIC, GTIA, and POKEY chips are available on Curt Vendel's web site, thanks to permission from Hasbro's Atari Interactive Division's release of this data. See the TIFF scans:
http://www.atari-history.com/articles.html
Keith Howell has converted the hi-res TIFFs into clean HTML:

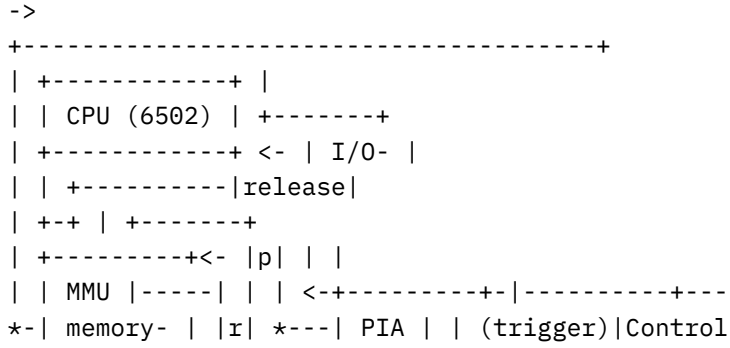
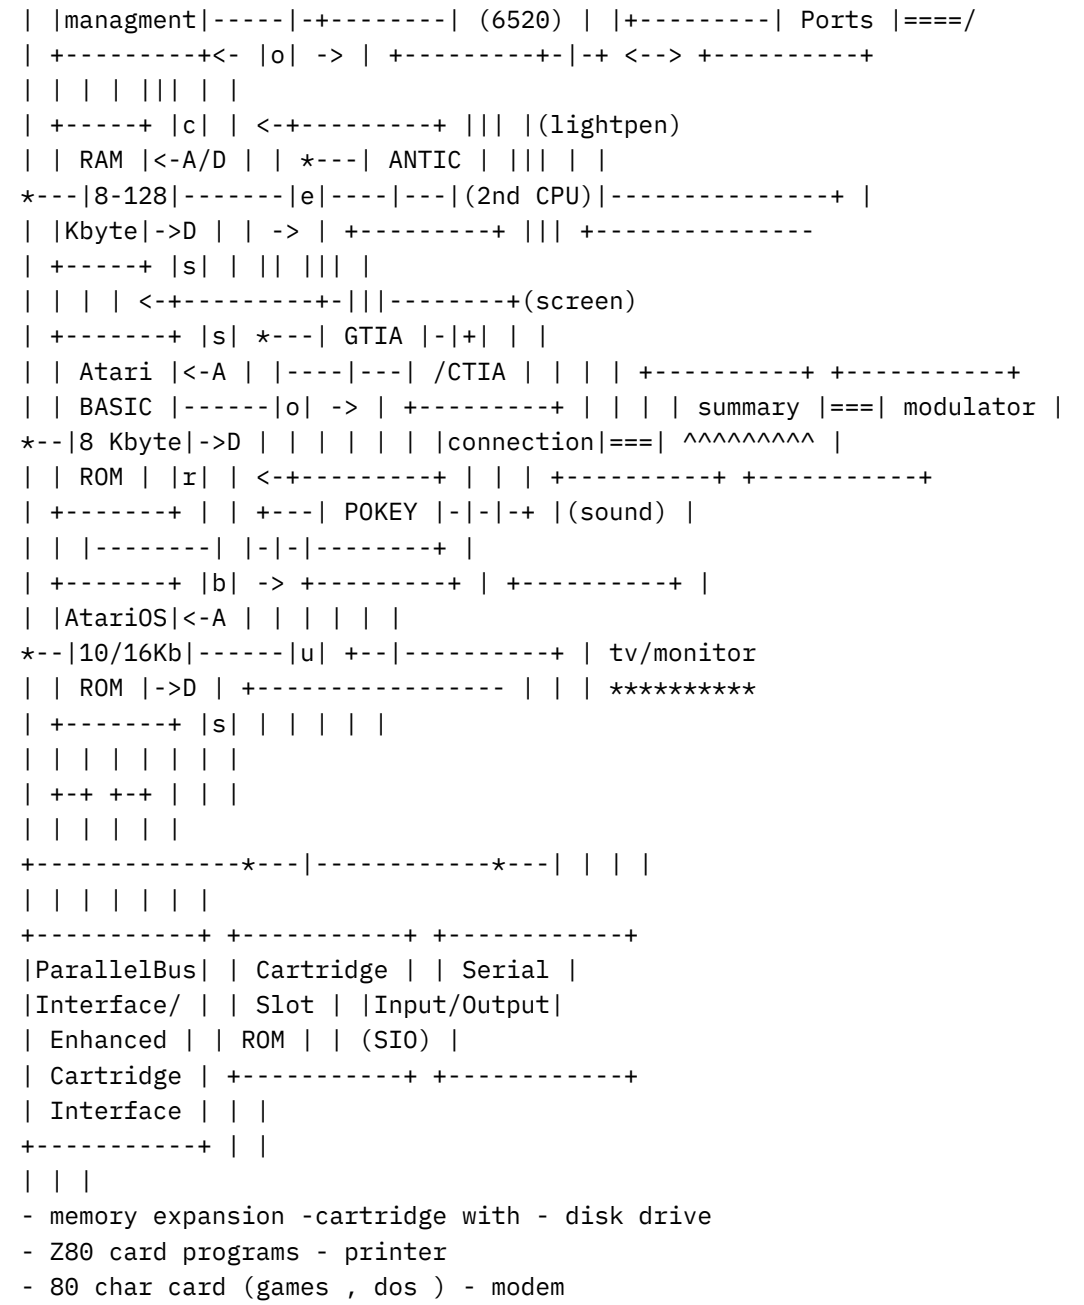
Subject: 1.12) What is the internal layout of the 8-bit Atari?

ASCII art by Thomas Havemeister.





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800: 8K, 16K or 48K standard
600XL:16K standard
1200XL/800XL/65XE/800XE/XEGS: 64K standard
130XE:128K standard
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502B, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE/many PAL 65XE only

* Some late XE's use a 68B21 for PIA; PIA is 6520/6520A on all others

The following are most of the team who originally designed the 400/800.
Credit for providing this information for the FAQ goes to:
Doug Neubauer (by way of James Finnegan), Jerry Jessop, Scott Emmons

VLSI HARDWARE:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators - Partner in "Cyan Engineering"

Steve Smith - Technician for ANTIC and GTIA
Delwin Pearson - Technician for POKEY

Subject: 1.13) What issues surround NTSC vs PAL versions of the 8-bit Atari?

Contributors to this section:
Wayne Booth, Graham Thornton, Brent Buescher Jr., Thomas Richter, Jindroush

Some quick definitions first:

NTSC standard: Abbreviation for "National Television Standards Committee"
TV signal standard used in North America, Central America, a number of South American countries, and some Asian countries, including Japan.
525 lines per frame
60 half-frames per second (interlaced) = 60 Hz
Complete frame refreshed 30 times per second

PAL: Acronym for "phase alternation by line"
TV signal standard used in the United Kingdom, much of the rest of western Europe, several South American countries, some Middle East and Asian countries, several African countries, Australia, New Zealand, and other Pacific island countries.
625 lines per frame
50 half-frames per second (interlaced) = 50 Hz
Complete frame refreshed 25 times per second.

PAL-M: A modified version of PAL, used in Brazil.

SECAM: Acronym for "systeme electronique couleur avec memoire"
TV signal standard used in France, eastern European countries, the former USSR, and some African countries.
625 lines per frame
50 half-frames per second (interlaced) = 50 Hz
Complete frame refreshed 25 times per second.

Now then, how do the differences among 8-bit Atari computers designed for the different world television signal standards affect users trying to use software written elsewhere in the world?

The 50Hz vertical refresh frequency of PAL machines translates into more vertical blank interrupt (VBI) time for demos and other computation-intensive graphics software, when compared to the time available for VBIs on NTSC machines with the faster 60Hz refresh frequency. So PAL demos and games that won't work on NTSC machines are usually returning from a VBI too late. Some also attempt to use more vertical resolution ("longer" display lists) than an NTSC display can handle.

Note that the reverse is also true. Software using VBIs will run more slowly on a PAL Atari than on an NTSC Atari.

Replacing the NTSC ANTIC chip in an NTSC Atari with a PAL ANTIC changes the screen refresh rate to 50Hz, allowing most of the PAL-only European software to run on a North American NTSC Atari. However, make sure your display device can support a 50Hz PAL signal first! North American Atari users can also obtain and use real European PAL Atari machines, with the same caveat concerning the display device.

Bottom line:
Software written for NTSC machines (North America) will (almost) always work on PAL machines (Europe), but software designed on PAL machines won't necessarily work on NTSC machines.

Jindroush contributes: (2/26/02)
Could there be a program which runs on NTSC Atari and not on PAL Atari? Yes, if it uses some precise timing copy protection (probably based on vblank timing). Examples of these are Transylvania and The Quest by Penguin Software.

Thomas Richter mentions another NTSC vs PAL issue:
Another point is that the popular pseudo-colors used in the ANTIC-F (Graphics 8) mode are not colorful at all when displayed on a PAL TV, because of differences in the color encoding for the TV. The schematics of the XL computers include however a hack how to change the PAL version to the NTSC version (the PAL versions include two crystals, one with 5/4th of the frequency of the other. One is used for the system clock, the other for the color clock), but I never dared to apply it.

And on 10/16/03 Thomas Richter answered a related question this way:
>> Note that it's typically not too hard to get an NTSC Atari to run in PAL
>> by just swapping out the ANTIC chip.
>>
>> Unfortunately, some demos actually check the OS ROM for a particular
>> value to see if it's a PAL machine or not, and then refuse to run if
>> they are. *grumble* I'd rather have a warning than a refusal. :^P

> As far as I am aware, the only value to tell a PAL from a NTSC machine is in
> GTIA. Maybe swap that one as well and see what you get

Absolutey correct, GTIA keeps the PAL/NTSC register and the Os rom reads it from there. However, besides the GTIA PAL and NTSC machines differ in other

aspects. For example, on PAL machines an additional oscillator of 5/4 of the main frequency is present to generate the color frequencies needed to drive GTIA. There is no such circuit in NTSC Ataris. Besides, this factor of 5/4 is also the reason why you don't get "artifacted colors" on PAL machines (or, at least, not very good ones.)

Subject: 1.14) What are the pinouts for the various ports on the Atari?

Controller Port (4 on 400/800, 2 on all others):

Subject: 2.1) What video display devices can I use with my Atari?

Contributors to channel output variations list:
Jon Levy, Rene de Bie, Sysop Fox-1

Most 8-bit Atari computers put out video signals in two places:

1) Radio-Frequency (RF) signal, either one VHF channel, or two VHF channels selectable by a switch on the computer. Variations depend primarily on the part of the world that the particular version of the computer was desgined for.

Most North American computers: VHF channels 2-3 switch-selectable.
channels 3-4 switch selectable also reported
European computers: VHF channels 3-4 switch-selectable,
or no switch (what channel?) both reported
UK computers: VHF channel 36, no switch,
or channels 38-39 switch selectable both reported
Australian computers: VHF channel 1 (400/800: channels 1-2 selectable)

Any further clarifications would be appreciated!

Accessories needed:
a) RF Cable. (RF=radio frequency--video and audio signals in the same line)
On the 400/800 models, the RF Cable does not detach from the computer.
The output end of the cable is an RCA male connector.

b) TV Switch Box. Includes an RCA female connector for RF signal input from the Atari, input connector(s) for your TV attenna and/or cable TV company, and 75- and/or 300-ohm VHF output connector(s) for connection to the VHF input on the television. (Radio Shack carries a suitable TV Switch Box.)

2) A proprietary 5-pin DIN Monitor Jack, which includes two video signals:
a) Composite video.
b) Y/C Video, also known as S-Video:
separate composite luminance (Y) and chrominance (C) signals.

Exceptions among the computer models:
-the 400 and North American 600XL lack the Monitor Jack.
-the XE Game System includes an RCA-style jack in place of the Monitor Jack, providing a plain composite video signal only.
-the Monitor Jack on the 600XL, 800XL(most) and 1200XL lacks the separate chrominance signal. (But it exists internally, and can be restored to the monitor jack via hardware modification.)

The pinout for the Atari Monitor Jack is in the pinouts sections of this FAQ list.

The typical Atari Monitor Cable includes the male 5-pin DIN connector on one end, and two RCA male connectors on the other end. One of the RCA connectors will carry the monophonic sound signal, and the other will carry the composite video signal. Color composite monitors were common in the mid-80's, but these days many televisions have an RCA female composite video input connector which works fine with the Atari.

You may find an Atari Monitor Cable where the video signal carried on the second RCA connector is not the composite video signal, but the composite luminance signal. These cables are for use with monochrome composite video monitors (usually green or amber).

The ideal Atari Monitor Cable includes 3 RCA male connectors on the output end, carrying the sound signal, the composite luminance signal, and the composite chrominance signal. Only the best composite monitors include separate chrominance and luminance inputs. Commodore produced many fine monitors of this type, popular with Atari users.

Lonnie McClure provides this information on suitable Commodore monitors:
1701, 1702, 1802, CM-141, 1080, 2002, 1902, 1902A*, 1084**, 1084S**

* The 1902A used a DIN connector for chroma/luma, which makes cabling a bit more of a problem. The composite and audio connectors are standard RCA jacks, however.

** The 1084 and 1084S had more than one version. Some used the a DIN connector for chroma/luma connections, like the 1902A, while some used standard RCA jacks.

The 1902 and 1902A are very different in appearance. The original 1902 shares the same slightly rounded front case design as the 1080 and 2002, while the 1902A is has a rather square case design, and was manufactured by Magnavox (as were some of the 1084 and 1084S versions).

The separate composite chrominance and luminance signals that the Atari puts out comprise what the world has since come to call Y/C video or S-video. S-video connectors are normally Mini4. It is possible to build a cable, or purchase several adapters, that can allow you to utilize the separate Y/C signals generated by the Atari with a television (or other display device) that provides a standard S-video Mini4 input jack. This is the ultimate display option for the 8-bit Atari. Clarence Dyson has a nice page about such a project at http://www.wolfpup.net/atari/svideo.html .

Adapters also exist that will take in composite video or s-video, and output a conversion of the signal as a standard VGA video signal. These are often known as a "VGA converter" or "Scan doubler" or "Up-converter." With such a device, the 8-bit Atari can be used with a standard PC VGA monitor. One such adapter is the Cheese Video Box from AV Toolbox, http://www.avtoolbox.com. AV Toolbox produces several other similar devices. An earlier popular adapter was the JAM!! from AIMS Lab.

SCART - an acronym for Syndicat des Constructeurs d'Appareils Radiorecepteurs et Televiseurs - is a 21-pin universal connecting cable/socket system used for audio/video components in Europe. The cables transmit RGB, composite video, S-Video, mono and stereo sound. SCART, which is also known as PERITEL, EURO AV BUS and EUROCONECTOR, is common throughout Europe, particularly in France, England, Germany, Switzerland, and Scandinavia. SCART is also very popular in the Russian Audio Video market. It is possible to interface the Atari's composite video signal, along with the audio signal, through a SCART connector, though there have been few reports of people actually doing this.

Keith Howell has a nice page on some of these topics:
http://www.howell1964.freeserve.co.uk/Atari/800XL/Atari_800XL_Video.htm

December 2003--More Than Games announced "A8 A/V BOB", an audio/video
breakout box featuring phono connectors for composite video, chroma,
luminance, and mono audio; it also features an s-video jack providing chroma
and luminance. http://www.a8maestro.com/sites/mtgcat/mtgcat.htm

---

Subject: 3.1) What are the Atari 410, 1010, XC11, and XC12 Program
Recorders?

The Atari Program Recorders provide storage and retrieval of programs
and data on cassette tape. In addition to the digital track that stores
computer data, a second audio track is provided to play music or voice
as the program runs.

Data transmission rate: 600 bits per second.
Data storate capacity: 100,000 bytes per 60-minute cassette.
Track configuration: 4 track, 2 channel (digital data and audio track)

410 Program Recorder
- early Japan version had a carrying handle
- most versions made in Hong Kong
- 410a--Taiwan version
- built-in SIO cable - must end SIO daisy chain
- power - plugs directly into wall (most versions)
- "410P" version (rare). Karl Heller writes:
"It came in the white 410 box with an Atari yellow/orange paper slip
stating which power supply to use with it."

1010 Program Recorder
- Chelco version has Stop/Eject, then Pause buttons
- Sanyo version has Pause, then Stop/Eject buttons
- two SIO ports

XC11 Program Recorder
- has a built-in SIO cable and one SIO port

XC12 Program Recorder
- built-in SIO cable - must end SIO daisy chain
- Information on the Turbo 6000 Baud Interface and the Chaos Loader:
http://www-user.tu-chemnitz.de/~sgl/atari/turb6000/turb6000.htm

---

Subject: 3.2) What other cassette recorders can I use with my Atari?

Firstly Atari themselves put out several models beyond the 410/1010/XC11/XC12,
generally only known in eastern Europe:

XCA12 Program Recorder -in same case as XC12...Poland
CA12 Program Recorder -in same case as XC12...Poland
image: http://romualdl.multimania.com/images/atari/ca12.jpg

XL12 Program Recorder -XC12 w/slight changed design.
Czech/Slovak/Poland
XC13 Program Recorder -XC12 which was "T2000 ready".
Czech/Slovak/Poland

For more information on the Turbo 2000 (T2000) and SuperTurbo modifications to Atari program recorders, with speeds up 9600 baud, see http://jindroush.atari.org

Unlike other microcomputer systems of the time, it was very unusual to use anything but Atari brand program cassette recorders. One third-party product released was the:

Compu-Mate, by General Electric (GE, G.E.)
Includes external interface module, a power cord/adapter, and SIO cable.
No second SIO port - must be at end of SIO chain.

Subject: 3.3) How do I run a program from cassette?

To run an Atari BASIC program from cassette:

1. Place the cassette in the recorder.
2. Press REWIND of FORWARD, if necessary, to bring the tape to the position where the program is located.
3. Boot the computer to the Atari BASIC READY prompt.
4. There are several possibilities for the next step, depending on how the program was saved, and whether you want to run the program or just load it into RAM. Enter one of the following four commands:
a. CLOAD loads programs saved with CSAVE
b. LOAD "C:" loads programs saved with SAVE "C:"
c. ENTER "C:" loads programs saved with LIST "C:"
d. RUN "C:" loads&runs programs saved with SAVE "C:"

] Relative efficiency of the three cassette tape recording techniques:
] CSAVE/CLOAD - most efficient - fastest saves/loads - tokenized files
] SAVE "C:"/LOAD "C:" - middle efficiency - middle speed - tokenized files
] LIST "C:"/ENTER "C:" - least efficient - slowest - straight ATASCII

5. The computer will "beep" as a signal for you to press PLAY on the recorder.
6. Press the RETURN key on the computer keyboard, and the program will load into the computer.
7. Press STOP on the recorder when loading has finished.
8. Unless you entered RUN "C:" above, now enter the command: RUN

To run an Atari BASIC or machine language program from cassette upon startup:

1. Place the cassette in the recorder
2. Press REWIND of FORWARD, if necessary, to bring the tape to the position where the program is located.
3. Turn on the computer while holding down the START key.
But if your computer has Atari BASIC built-in and you're running a machine

language program, hold down both the START key and the OPTION key.
4. The computer will "beep" as a signal for you to press PLAY on the recorder.
5. Let go of the START/OPTION button(s).
6. Press the RETURN key on the computer keyboard, and the program will load
into the computer.
7. Press STOP on the recorder when loading is complete and the program is
running.

Subject: 3.4) What are the Atari 810, 815, 1050, and XF551 Disk Drives?

Section includes contributions by Andreas Magenheimer, TXG.

The Atari Disk Drives provide storage and retrieval of programs
and data on 5.25" floppy disks.

==> Atari 810 --- a 5.25" floppy disk drive
The least common denominator for the Atari. One mode of operation:
1) Single-Sided, Single-Density--
FM 40 tracks x 18 sectors/track x 128 byte/sector = 90K capacity
19.2Kbps transfer rate. 288RPM.
The 810 includes a 6507 microprocessor.
Shipped with DOS 1 (very early) or DOS 2.0S
earlier MPI version- push button door opening for disk access
later Tandon version- lift door, like a garage door disk access
two SIO ports
accessories from Atari:
CX8100 Atari 810 Blank Diskettes (5 per box)
CX8111 Atari 810 Formatted Diskettes II (5 per box)
CX8202 Atari 810/815 Blank Diskettes (5/box, certified for double density)

Third-party upgrades for the 810:
810 Archiver -- copy many copy-protected programs
Happy 810 -- Happy Backup, Warp Speed 52Kbps, 18 sector buffer
810 Fast Chip by Binary 10%-40% faster
810 Turbo by Neanderthal Computer Things (NCT) -- double-density
see: http://www.qnet.com/~dons/810T.html
810 Duplicator (DT-Duplicating Technologies) -- copy disks, double-density,
"read 18 sectors in the time normally for 1"

==> Atari 815 Dual Disk Drive --- dual 5.25" floppy disk drives in one unit
Were produced (all hand-built), but are very rare. One mode of operation.
Per drive:
1) Single-Sided, Double-Density--
MFM 40 tracks x 18 sectors/track x 256 bytes/sector = 180K capacity
19.2Kbps transfer rate. 288RPM.
The 815 includes a 6507 microprocessor.
Shipped with DOS 2.0D
MPI mechanism version- push button door opening for disk access
Tandon mechanism version- lift door, like a garage door disk access
accessories from Atari:

CX8202 Atari 810/815 Blank Diskettes (5 per box, certified for double density)
Stephen Knox writes (12/28/02):
I believe the story on the 815s was Atari didn't want to release them due to
severe QA problems with the drive but they had so many preorders they had to
release something. I think they filled the preorders and then cancelled the
model - Most of them got returned due to problems.

==> Atari 1050 --- a 5.25" floppy disk drive
Same as the 810, plus Dual-Density capability. Two modes of operation:
1) Single-Sided, Single-Density, 90K, 810 compatible
2) Single-Sided, Dual-Density, otherwise known as "Enhanced Density" because
it is not true double-density--
MFM 40 tracks x 26 sectors/track x 128 bytes/sector = 128K capacity
19.2Kbps transfer rate. 288RPM
The 1050 includes a 6507 microprocessor.
Shipped with DOS 2.0S, DOS 3, or DOS 2.5
DIP switches: Black & white left: Drive 1
Black right, white left: Drive 2
Black left, white right: Drive 3
Black & white right: Drive 4
Third-party upgrades for the 1050 (all add a true SSDD 180K capability):
US Doubler (ICD) SS SD/ED/DD UltraSpeed (US) 54Kbps, sector skewing
Happy 1050 SS SD/ED/DD Warp Speed 52Kbps, 36 sector buffer,
(Happy Computers) Happy Backup. also read/write 180K 5.25" MS-DOS floppies
I.S. Plate (Innovated Software) SS SD/ED/DD Ultra/Warp (USD/Happy clone)
Hyper Drive (Chaos! Computers) SS SD/ED/DD Warp Speed 52Kbps (Happy clone)
Super Archiver (CSS) SS SD/ED/DD UltraSpeed 54Kbps (US Doubler clone)
Super Archiver II(CSS)SS SD/ED/DD UltraSpeed 54Kbps (US Doubler clone)
Cheer-Up 1050 SS SD/ED/DD Warp Speed 52Kbps (Happy clone)
Speedy 1050 SS SD/ED/DD Warp Speed 57Kbps (Happy clone), 8kb buffer,
(Compy-Shop, now ABBUC) DOS, copier, track & density displays, beep speaker
Mini-Speedy same as Speedy 1050, but without displays & speaker
Super Speedy 1050 SS SD/ED/DD Warp Speed 96,000Baud (Happy clone),192K RAM
SuperMax 1050 SS SD/ED/DD UltraSpeed 52Kbps (US Doubler clone)
Lazer 1050 SS SD/ED/DD Warp Speed and UltraSpeed 54Kbps
Engl-Turbo-1050 SS SD/ED/DD Turbo Speed approx. 70,000 Baud (uses
(german Turbo) Sector skewing that differs from USDoubler)
1050 Duplicator (Duplicating Technologies (DT))
SS SD/ED/DD "read 18 sectors in the time normally for 1"
sources(Jim Patchell)http://www.oldcrows.net/~patchell/atari/duplicator.html
Klone ???????

Rich Mier professes:
You've been plugging and unplugging the SIO cable with the 1050 power pack
plugged in, right? That's a no-no. Most of the time it's Okay, but about 1
in 10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right,
rear of the main board. A 14 pin DIL chip. Actually it is an array of 5
transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be
ON on the CPU. The problem has to do with the secondary winding of the Power

Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it, not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it 'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

==> Atari XF551 --- a 5.25" floppy disk drive. Four modes of operation:
1) Single-Sided, Single-Density, 90K, 810 compatible
2) Single-Sided, Enhanced-Density, 128K, 1050 compatible
3) Single-Sided, Double-Density, 180K, Percom & other 3rd parties compatible
4) Double-Sided, Double-Density--
MFM 80 tracks x 18 sectors/track x 256 bytes/sector = 360K capacity
Writes "backwards" to the second side of the disk, when compared to a two-sided "flippy" disk with SSDD 180K format on each side
High speed 38400 bps burst mode usable only with SpartaDOS X, SuperDOS 5.1, TurboDOS, DOS XE, and patched SpartaDOS 3.2.
Rotaton rate: 300RPM. Since all other Atari-specific drives run at 288RPM, this results in rare compatibility issues. Specifically, these commercial disks do not load in, and can be damaged by, the XF551:
- Flight Simulator II (subLOGIC)
- Blue Max (Synapse)
- Bank Street Writer (Broderbund). Conflicting reports about this one.
8040 cpu + external ROM or 8050 cpu with internal ROM
Shipped with DOS 2.5 or DOS XE.
DIP switches: Both dips down: Drive 1
Left down, right up: Drive 2
Left up, Right down: Drive 3
Left and Right up: Drive 4
Chinon-built XF551-cannot read/write/format backside if no timing hole
Mitsumi-built XF551--can read/write backside if to timing hole, if formatted
Third-party upgrades for the XF551:
CSS XF Single Drive Upgrade--3.5", 720K floppy drive replacement
also read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFsingdrup.htm
CSS XF Dual Drive Upgrade--add 3.5" drive w/o losing the 5.25" drive
also read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFdualdrup.htm
CSS XF551 Enhancer--overcomes sensor for index hole, create flippy disks
see http://www.nleaudio.com/css/products/XF551enh.htm
CSS XF Update--replace drive OS, adds UltraSpeed
see http://www.nleaudio.com/css/products/XFupdate.htm
Hyper-XF-OS--avaiable for 5.25" or 3.5" floppy versions; uses sector skewing and UltraSpeed (but no track buffer!); can use disk partitions (2 on 5.25", 4 partitions on 3.5") with mixed Densities (S/E/D) or standard 360kbytes (5.25") / 720kbytes (3.5"); can theoretically read/write ST/PC 720k disks (software is missing!)
OS created by Stefan Dorndorf/Germany;
XF-Speedy--replaces the 8040 CPU with a 65C02 + ROM + Memory

Subject: 3.5) What other floppy disk drives can I use with my Atari?

Subject: 3.6) What kinds of 5.25" floppy disks can I use with my Atari drives?

Russ Gilbert writes:
If you're talking standard computer store, you can't use those 5 1/4" disks. I mean you can't use high density disks. They must be double density to use with the 1050. Almost all double density 5 1/4" disks have a hub ring, high density disks don't have the hub ring.

RHamiIton5 elaborates: (5/12/01)
The Atari 8 drives do not have write heads and circuity which can handle the type of oxide coating used on the high density floppy media; they cannot write reliably to them. The hub ring has just become a sort of marker to distinguish the high density from the standard double density diskettes.

Way back in your apple days of '79-'82, most disks were hubless and only the really premium brands offered hubs to prevent slippage and out of round problems; you could even buy little kits for adding you own hub rings.

When the home computer swell really hit around '83 and price wars began, hub rings became common on good disks and eventually became standard down to include most generic bargain diskettes.

The introduction of high density 5.25's required a different coercivity (= magnetizability) to get more bits in a smaller space and suitable electronics to do it. These disks were produced hubless; was it a differentiating label or just unnecessary because of stronger mylar construction? Anyone?

Subject: 3.7) What can I do to extend the life of my floppy disks?

Lee Hart writes (January 2004):

Personally, I have several hundred floppy disks for my Atari 800, Kaypro 4, Heathkit H89, and IMSAI 8080 computers that are 10-20 years old. What I can say in general:

- Most disks stored in plastic boxes or ziplock baggies survived.
- Most disks stored in cardboard boxes or just their sleeves did NOT survive.
- Some brands lasted better than others, but I haven't collated the information so as to make any kind of definitive statements.
- If a disk cannot be read, CLEAN THE DISK DRIVE HEAD before attempting to read another disk! Otherwise, crap from the bad disk will remain on the head, and will scar and destroy any SUBSEQUENT disk you put in the drive! (the voice of painful experience).
- For lack of a better plan, for each of my surviving disks I am:
a. reformatting another blank disk
b. copying the data from an old disk onto the blank disk
Then I have a more recently-produced backup disk in case the

original disk later fails.

Subject: 3.8) How can I use a hard drive with my 8-bit Atari?

Atari never produced hard drives for the 8-bit Atari, but a variety of options have been produced over the years. No common DOS version was written with drives the size of hard drives in mind, and very few 8-bit Atari users have owned hard drives for the Atari. Yet, if you're serious about it, a hard drive can make a tremendous addition to your system!

A couple of these options are hard drives designed specifically for the 8-bit Atari computers; the rest are interfaces designed to let you attach an industry standard SASI, SCSI, or IDE type hard drive. Customized software (OS, DOS) is often involved as well.

Larry White contributed to some of these descriptions.
Additional Corvus info from an eBay auction by Ben Corr, 7/03.

==> Corvus hard drive (5MB, 10MB, or 20MB)
Attaches via joystick ports 3 & 4 on the Atari 800 only.

-- Corvus Integrator Board - alows access to the Corvus Disc without the Corvus software, so that any DOS that uses standard SIO calls will work.

-- Corvus Multiplexer - used to network up to 8 Ataris to one Corvus Drive

- Corvus Mirror card - back up the drive's contents onto video tape

==> SupraDrive Atari Hard Disk, by Supra, later K-Products. 10MB or 20MB.
includes external Hard Disk Interface
Some limitations on drive type and size and total number of drives in sys.
Attaches via PBI, or ECI with adapter.
See: http://www.atarimagazines.com/v5n6/Supradrivefor8Bit.html
Maybe still available from Bob Klaas?

==> BTL Hard Disk System
BTL 2001 Connector for 600XL/800XL PBI
BTL 2002 Connector for 130XE/800XE/65XE ECI
BTL 2004 SASI Hard Disk Adapter
See: http://www.atarimagazines.com/v5n12/BTLHardDisk.html

==> Multi I/O (MIO) interface, by ICD. Includes:
- Parallel printer interface
- Serial interface, for modem or serial printer. will handle 19.2Kbps
- 256K or 1 MB RAM, for RAMdisk or printer spooler
- SASI/SCSI interface, supports up to 8 controllers.
Limited to drives with 256-byte sectors.
Attaches via PBI, or ECI with adapter.

==> CSS Black Box interface
RS-232 Serial Modem Port (19.2Kbps) w/ hardware flow control,
Parallel Printer Port,SASI/SCSI Hard Disk Port, Operating System Enhancements,

optional 64K printer buffer. Supports drives with 512-byte sectors.
PBI/ECI device. Available: http://www.nleaudio.com/css/products/black.htm

==> SmartIDE project by Bob Woolley
Uses 256 of the normal 512 byte sectors. Point-to-point wiring project.
Articles and software at http://www.wolfpup.net/atari/atari.html

==> IDE Hard Drive Interface 1.0
By Konrad M. Kokoszkiewicz (Draco) and Jacek Zuk
PBI device. Logical sector length: 256 or 512 bytes
Availability???

==> Fine Tooned Engineering (FTe) Multi I/O II (MIO II) interface
An IDE interface. Several exist, but it was never really released

==> msc-IDE Controller
created by Steve Birmanns and Matthias Belitz
* real device for the parallel-port (PBI/ECI) of the Atari XL/XE
* up to 240 partitions per harddisk supported
* emulates D1: until D9: of disk devices (access to 9 partitions at one time)
* full bootable from any partition (with standard XL-OS)
* write protectition capability
* supports master/slave configuration
* more than 30 KB/s file access with SPARTA-DOS 3.2 gx (reading)
* more than 10 KB/s file access with SPARTA-DOS 3.2 gx (writing)
* software partially supports CD-ROM and ZIP drives.
Sold out.
http://www.birmanns.de/atari/

==> Gary Morton's BadSector"A" Project
Wants to connect his IDE drive to the SIO bus.
http://www.alma.demon.co.uk/Atari/AtariProjects.html

==> MyIDE interface and software by Mr.Atari, Sijmen Schouten
Point-to-point wiring project. Different units for 800 and XL, including a
cartridge version for the XL.
http://home.wanadoo.nl/mr.atari/

==> SIO2IDE, by Marek Mikolajewski (MMSoft)
The SIO2IDE is a simple interface that allows you to attach any IDE Disk
Drive to your 8-bit Atari computer. Latest interface version has the
following main features:

* ATARI side:
- uses standard Atari SIO at a speed of 19200 baud
- works with Atari High Speed SIO (US and Happy) at a speed of 52000 baud
- emulates Atari disks D1: to D8:
- can be used with any Atari DOS and OS
- can be used without any problems with other SIO devices (disk drivers,
printers, modems, SIO2PC, second SIO2IDE etc)
- can be easy installed inside your Atari with 2.5' laptop HD
- is easy to configure via special fdisk.com utility software
(changing disks sequence and active directory)

* IDE device side:
- all IDE ATA/ATAPI devices can be used: Disk Drives (2.5' and 3.5'),
CD-ROMs, Compact Flash cards etc.
- supports PC file systems, FAT16 and FAT32
- supports CD file system, ISO9660
- supports ATR disk images (SD, DD up to 16MB)
- supports directory change (multiconfig)
- is easy to configure, many text configuration files (sio2ide.cfg) can
be stored in different directories
- disk configuration can be checked by special checkfs.exe PC utility
NOTE: checkfs.exe does NOT work with HDD connected via USB port
- standard disk utilities can be used (defrag.exe, scandisk.exe etc)
* USB port side:
- interface works as Mass Storage Class device (removable drive)
- no drivers are needed for Windows 2K, ME, XP
- driver for Win98 is included in this SIO2IDE package

http://www.atari.cuprum.com.pl/sio2ide.htm

==> Nathan Hartwell's IDE projects
http://www.magelair.com/

Subject: 4.1) What are the Atari 820, 822, and 825 Printers?

The following printers were produced by Atari and styled to match the 400/800
computers.

Atari 820 Printer:
- 40-column impact printer
- 5x7 dot matrix
- 40 characters per line, upper & lower case alpha
- horizontal and vertical alphanumeric characters
- 6507 microprocessor, 6532 RAM I/O chip, 2K ROM
- 40 characters per second
- uses Standard Roll Paper/adding machine paper

Atari 822 Thermal Printer: (= Trendcom Model 100)
- 37 characters per second
- 10 characters per inch
- 40 characters per line, upper/lower case and point graphics
- 5x7 dot matrix

Atari 825 80-Column Printer (= Centronics 737)
- 3 character sets:
monospaced 7x8 dot matrix at 10 characters per inch
monospaced condensed at 16.7 cpi
proportionately spaced Nx9 dot matrix at avg of 14 cpi (N=6..18)
- all characters can be elongated (printer double width)
- characters per line: 80 at 10 cpi; 132 at 16.7 cpi
- speed: 50 cps at 10 cpi; 83 cps at 16.7 cpi; 79 cps avg. proportional
- print buffer: 1200 dot columns

- paper: roll, fanfold, or cut sheets
- requires Atari 850 Interface Module or equivalent

Subject: 4.2) What are the Atari 1020, 1025, 1027, and 1029 Printers?

The following printers were produced by Atari and styled to match the XL
series computers.

Atari 1020 Color Printer:
(= Commodore 1520 / Oric MCP40 / Tandy/Radio Shack CGP-115 /..; made by ALPS)
- 4-color graphics: (black, red, blue, green). optional 8-pen rainbow package
- alphanumberics and X,Y plotting capability
- 10 cps (40-column mode)
- 20, 40 and 80-column modes
- horizontal and vertical alphanumerics, English and International chr sets
- water soluble ink pen technology
- 4-pen barrel print head
- microprocessor
- paper: standard roll paper (40 column width)
- AtariGraphics cassette software included

Atari 1025 80-Column Printer: (= Okidata ML80)
- 40 cps (80-column 10 cpi mode)
- 5 cpi expanded (40 col), 10 cpi (80 col), 16.7 cpi condensed (132-col)
- 5x7 character dot matrix
- buffer: 132 chrs at 16.7 cpi, 80 chrs at 10 cpi
- paper: roll,fanfold,single sheets. optional:roll paper holder, tractor feed

Atari 1027 Letter Quality Printer: (= Mannesmann Tally Riteman LQ.)
- fully formed characters, prestige elite 12)
- 12 characters per inch (80 columns)
- 20 characters per second
- single sheets or roll paper

Atari 1029 Programmable Printer (by Seikosha)
- 7-pin dot matrix, same as Commodore MPS-801
- Released for Europe & Canada (not USA)
- Rich_N_Feymus says:
I think its a SEIKOSHA GP500, but not 100% sure. However, the
Commodore MPS-801 ribbons should be much easier to find.
- The Tandy DMP 110 is another model reported to be the same as the 1029.

Subject: 4.3) What are the Atari XMM801 and XDM121 Printers?

The following printers were produced by Atari and styled to match the XE
series computers.

Atari XMM801 Printer: (= SHINWA CP80)
- 80 columns, dot matrix
- friction feed or pin feed

- pica 10 cpi, double width pica 5 cpi, elite 12 cpi,double width elite 6 cpi,
condensed 16.5 cpi, double width condensed 8.25 cpi
- Ribbon: Commodore 1526 and the Mannesman-Tally Spirit 80

Atari XDM121 Printer:
- 80 column, daisy wheel--letter quality
- underlining, subscripts, superscripts
- friction feed paper
- Ribbon: Silver Reed CF130, Olivetti ET201,ET221,Nu-Kote NK136

Subject: 4.4) What other printers can I use with my Atari?

Some third-party printers were marketed for use with the Atari 8-bit
computers:

Alphacom 42 + Atari interface cartridge
- requires 850 Interface or equivalent
- thermal
- 4 1/2" width paper
- supports complete ATASCII character set

Axiom AT-100 / Seikosha AT-100 / Seikosha GP-100A Graphic Printer
- built-in Atari interface, cable and connector, 2nd SIO port for daisy-chain
- dot matrix
- early model 30-cps, later version 50 cps
- Graph-AX graphics software package

Axiom GP-550AT (by Seikosha)
- built-in Atari interface, cable and connector, 2nd SIO port
- dot matrix
- 86 cps draft, 43 cps NLQ
- Graph-AX graphics software package

Axiom GP-700AT (by Seikosha)
- built-in Atari interface, cable and connector, 2nd SIO port
- 4 hammer print heads, 4-color ribbon cartridge
- 25 colors
- 50 cps
- Graph-AX graphics software package

Epson HomeWriter 10
- plug-in cartridge interface for the Atari
- 80 column dot-matrix printer
- draft quality printing at 100 cps and near letter quality at 16 cps

General Electric GE 3-8100 / TXP 1000
- GE Printer Interface Module for Atari
- dot-matrix
- 50 cps draft, 25 cps NLQ

Okidata Okimate 10 Personal Color Printer
- available Plug 'n Print Interface for Atari

- a thermal printer.
- single-sheet or tractor-feed paper.
- 26 colors
- 240 words per minutes

Beyond the above printer models, most any "industry-standard" line printer can work well with the Atari. For many years, most printers marketed for home use could be classified into one of two categories: parallel or serial interface. Parallel line printers are much more commonly used than serial line printers, with the Epson MX/FX/LX series defining the market.

The most common way to use an industry standard printer with the Atari has been to attach it through the 15-pin 8-bit parallel port of the Atari 850 Interface Module or equivalent (such as the ICD P:R: Connection). One gotcha here is that the 850's parallel port is DB15, where the PC world ended-up standardizing on a DB25 configuration. So you need to find or build a cable that provides the DB15 connector for the Atari end (and Centronics-type parallel connector on the printer end) when attaching a standard parallel printer to the Atari through an Atari 850 or equivalent.

Many 3rd-party disk drives for the Atari (along with the XEP80 Interface Module) do include a DB25 parallel printer port, rendering the need for an Atari-specific printer cable unnecessary.

The Atari 850 Interface Module and equivalents also provide standard DB9 serial RS232C ports, permitting use of standard serial line printers with the Atari. But this is much less common than parallel, both in the Atari world and in the industry at large.

Some folks have connected more modern inkjet and laser printers with parallel connections to the 8-bit Atari with success. Graphics printouts from the Atari may be less than ideal (look for a printer with an Epson MX/FX/LX printer series emulation mode), but these types of printers should work fine for plain text output if they can handle simple line print jobs. Anyone want to contribute their experiences to be included here?

Bob Woolley wrote on Sun, 14 Apr 2002:
I use HP LaserJet 4Ps on my Ataris. They are one of the last front panel selectable cheap printers - from which you can select your default fonts, etc. The newer laser printers can only set fonts and operating modes thru the interface, not impossible, but not as easy as selecting on the panel. This does allow you to print just about any point size of the internal fonts in the printer on your Atari.

Either way, you really have to do a little work to get properly formatted output from a word processor. I have managed to use the proportional font setting with AtariWriter and printer driver creation utilities to get good results.

Mathy van Nisselroy provides an AtariWriter printer driver for the HP LaserJet here: http://www-users.rwth-aachen.de/mathy.van_nisselroy/stuff.htm

Modern printers designed for home markets now tend to provide USB connectors.

Subject: 5.1) What are the Atari 830, 835, 1030, XM301, and SX212 Modems?

A MODulator/DEModulator translates digital information from your computer into
acoustic tones that can be sent and received, from modem to modem, via
standard telephone lines.

Atari produced several modems for use with the 8-bit Atari computers:

Atari 830 Acoustic Modem: (= Novation 'CAT')
- a stand-alone, acoustically coupled, frequency shift keying (FSK) modem
- up to 300 bits per second
- Bell 103/113 modem compatible
- requires Atari 850 Interface Module or equivalent

Atari 835 Direct Connect Modem:
- 300 bps
- Bell 103/113 modem compatible

Atari 1030 Direct Connect Modem:
- 300 bps
- Bell 103/113 modem compatible
- built-in ModemLink software.
- 2 SIO ports

Atari XM301 Modem:
- 300 bps
- Bell 103/113 modem compatible
- with XE Term disk software
- permanent SIO cable, must be at end of SIO chain
- draws its power from the computer via SIO

Atari SX212 Modem:
- SIO & DB25 RS232 serial ports, must be at end of SIO chain
- 1200 baud
- Bell 103/113/212A modem compatible
- rarely with SX-Express! disk software.

Subject: 5.2) What other modems can I use with my Atari?

Some third-party modems were marketed for use with the Atari 8-bit
computers:

==> Microconnection, by Microperipheral Corp.
300 bps, Bell 103 compatible, T-SMART software, pulse dialing (not touch tone)
Four versions:
buss-decoding version does not require 850 Interface or equivalent, includes
DB25 parallel printer interface, with or without autodial
Plain version requires 850 Interface or equivalent, with or without autodial
and autoanswer

==> MPP-1000C, by Microbits Peripheral Products
300 baud, joystick port 2, Smart Terminal cartridge

==> MPP-1000E, by Microbits Peripheral Products
300 baud, joystick port 2, Smart Term software
From: "Steven J Tucker" Sun, 13 Jan 2002 16:14:38 -0500
The 1000E..had this strange problem in that it could never hang up the phone

==> MPP-1200A, by Microbits Peripheral Products
Released? Vaporware?
1200 bps, joystick port 2

==> 300 AT, by Supra (same as MPP-1000E)
300 baud, joystick port 2, Smart Term software

==> 1200 AT, by Supra
1200 baud, Hayes compatible, connects to SIO via SupraVerter/R-Verter cable,
Smart Terminal software

==> Volksmodem, by Anchor Automation
300 baud, 'F' Cable permits connection to joystick port 2

==> Q-MODEM, by Quantum Microsystems
300 baud, two SIO connectors, QuanTerm disk or cartridge

Beyond the above modem models, most any "industry-standard" external serial modem can work well with the Atari. These have been commonly sold for PCs for many years. The Hayes Smartmodem more or less defined the market for these, initially.

One common way to use an industry standard external serial modem with the Atari is to connect it to the SIO port via an Advanced Interface Devices (A.I.D., later Supra) R-Verter Serial Bus Modem Adapter cable, or equivalent.

The other common way to use an industry standard external serial modem with the Atari is to attach it through the 9-pin RS232C serial port of the Atari 850 Interface Module or equivalent (such as the ICD P:R: Connection). One gotcha here is that the serial port on the 850 is DB9 female, where the PC world ended up standardizing on a DB9 male connector for this purpose. But gender converters are readily available.

For using modems at speeds of 2400 bps and up with the Atari, it will be useful to have an understanding of data flow control. Here is a definition of flow control from www.modems.com:

Often, one modem in a connection is capable of sending data much faster than the other can receive. Flow control allows the receiving modem to tell the other to pause while it catches up. Flow control exists as either software, or XON/XOFF, flow control, or hardware (RTS/CTS) flow control. With software flow control, when a modem needs to tell the other to pause, it sends a certain character, usually Control-S. When it is ready to resume, it sends a different character, such as Control-Q. Software flow control's only advantage is that it can use a serial cable with only three wires. Since software flow control regulates transmissions by sending certain characters,

line noise could generate the character commanding a pause, thus hanging the transfer until the proper character (such as Control-Q) is sent. Also, binary files must never be sent using software flow control, as binary files can contain the control characters. Hardware, or RTS/CTS, flow control uses wires in the modem cable or, in the case of internal modems, hardware in the modem. This is faster and much more reliable than software flow control.

Some 2400 bps modems, and probably all modems with 9600 bps speed capabilities and up, normally use V.42 standard error correction and V.42bis standard data compression. But V.42 requires either software or hardware flow control, and V.42bis requires hardware flow control (and V.42 error correction).

Hardware flow control is not available with the Atari 850's serial ports.

As a result, just before dialing out with your Atari telecom software, it's usually desirable, if not necessary, to disable your modem's flow control.

The Hayes modem command to disable flow control looks like:
AT&K0

The top speed of the Atari 850's serial ports is 9600 bps.

Clay Halliwell offers a tip on utilizing 9600 bps through the 850 Interface:
On 11 Feb 1996, Marc G. Frank said:

> I'm having problems getting a modem attached to my Atari 850 to
> communicate at 9600 baud. When I set my communications program to 2400
> baud, everything works fine. However, when I set it to 9600 baud, the
> modem echoes my characters but doesn't act on them. That is, at 2400,

The problem with the 850 is that some of them (like mine) don't produce a PERFECT 9600 baud signal. As a result modems can't train on it, and while they will echo characters back, for some nitpicky reason they won't pick up on the "AT" attention code.

The solution is to do all your dialing at 2400 baud, but set the S37 register to force the modem to try to connect at 9600. Then switch your Atari to 9600 after connecting.

Through the use of an ICD MIO or a CSS Black Box, it is possible to utilize modems at speeds up to 14.4 Kbps (V.32bis) at full speed with no loss of data. The serial R: device handler for the Black Box supports hardware flow control natively. Optional for the Black Box, but essential for the MIO, is the HyperSpeed handler by Len Spencer.

Hyperspd.arc is available at http://members.aol.com/lenspencer/atari8.htm

---

Subject: 6.1) What is the Atari 850 Interface Module?

While the Atari's SIO and controller ports did not conform to established industry standards, Atari produced the 850 Interface Module to address this issue. The 850 connects to the SIO port on the Atari, and provides:

- four 9-pin serial EIA RS232C ports
- One 15-pin 8-bit parallel Centronics-type port

Many "industry standard" (of the time) printers, modems, and various other devices can be used with the Atari computer in combination with an 850 Interface Module.

Early 850's are in an all metal (black) case, but most are in a plastic beige case matching the 400/800 computers. Other features:
- programmable baud rate on any port, including:
75, 110, 134.5, 150, 300, 600, 1200, 1800, 2400, 4800, and 9600 bps;
baudot speeds of 60, 66, 75, 100 words per minute
- uses standard ASCII. Baudot support for radio-teletype (RTTY).

PINOUTS

850 R1: Serial port DB9P:

11. Ground + 16
12. Fault + 32
13. Busy + 11
14. - +
15. D7 + 9
No connection to shield + Frame - to the shield wire

Because the 850 was relatively expensive, provided more capabilities than the average user was looking for, and was at times unavailable from Atari despite high demand, there were many 3rd-party interfaces designed to provide some compatible subset of the 850's features. Perhaps the most prominent example of such a product is the P:R: Connection from ICD.

Subject: 6.2) What is the Atari XEP80 Interface Module?

This text written by Thomas Raukamp.

Since the development of the Atari 8-bit line of computers in 1979, users wanted better text displays than the default 40x24. There has been some attempts to satisfy this need, like the Austin-Franklin board or the Ace 80/80xl cartridge. For more informations about these modifications read The Atari 8-bit Hardware Upgrade FAQ from David A. Paterson.

The Atari XEP80 Interface Module is Atari's entry to the 80 column field. It lets a XL, XE, 400 or 800 computer system display a full 80 columns across your monitor screen. The XEP80 provides a 256-character wide by 25-line display window. Up to 80 characters are displayed horizontally at once, and you can scroll horizontally all the way to the 256th character, depending on the application you're running. The XEP80 is connected to your system via a joystick port.

The XEP80 Module interprets commands from the computer for screen display or output to a printer. The module is supplied with an industry-standard 8-bit parallel port so you can connect a parallel printer to your Atari 8-bit (I even use a HP LaserJet IV on my 130XE ;)).

All programs that use the standard screen call (E:) should be compatible with the XEP80 Module. The software provided by Atari supports a 320x200 graphics mode - this mode only support direct bit images. Note that you can't use all of the standard graphic capabilities of the Atari anymore.

Although Atari recommends a monochrome monitor for usage with the XEP80, it runs fine with any type of composite monitor. The output looks great on my Commodore 1084 for example.

Along with the module comes a software-package containing an AUTORUN.SYS file, which is the XEP80 handler. If you want to use the module with an application that is compatible with the XEP80, which has it's own AUTORUN.SYS file, you can append the application's AUTORUN.SYS on the module's AUTORUN.SYS.
****
Editors for the XEP80:

2-9. Parallel Data
10. Not Used
11. Busy
12-17. Not Used
18-25. Ground

Subject: 6.3) What accessories did Atari produce for their 8-bit computers?

This should be a complete list of Atari "CX" accessories, two or three digit numbers, marketed for use with the 8-bit computers.

CX30-04 Paddle Controller Pair
CX40-04 Joystick Controller Pair
CX40 Single Joystick Controller
CX41 Joystick Repair Kit
CX22 Trak-Ball Controller
CX23 Kid's Controller
CX24 Pro-Line Joystick
CX42 Remote Control Wireless Joysticks
CX50 Keyboard Controller Pair
CX70 Light Pen (beige; the original Atari light pen)
CX75 Light Pen (+ Atarigraphics cartridge)
CX77 Touch Tablet (+ AtariArtist cartridge)
CX78 Joypad (shipped with the 7800 in Europe)
CX80 Trak-Ball
CX81 I/O Data Cord (5 ft)
CX82 Monitor Cable (Black and White Monitor)

CX85 Numerical Keypad (+ software Handler on diskette)
CX86 Printer Cable (included with 825 Printer)
CX87 Interface/Modem Cable (included with 830 Acoustic Modem)
CX88 Interface/Terminal Cable (null modem)
CX89 Monitor Cable (Color Monitor)
CX418 The Home Manager Kit (Personal Financial Management, Home Filing Manager
-or- Family Finances, The Home Filing Manager)
CX419 The Bookkeeper Kit/Atari Accountant (The Bookkeeper disk, CX85 keypad)
CX481 The Entertainer (Star Raiders, (Missile Command or Pac-Man),2 joysticks)
CX482 The Educator (410, BASIC cart., States & Capitals cassette)
CX483 The Programmer (BASIC, BASIC Ref. Manual, BASIC Self-Teaching Guide)
CX484 The Communicator (850, 830, TeleLink I cart.)
CX488 The Communicator II (835, TeleLink II cart.)
????? The Arcade Champ (Pac-Man, Qix, 2 joysticks, cartridge storage case)
????? The BASIC Tutor I (Inside Atari BASIC bk,Invitation to Programming 2&3)
CX852 8K RAM Memory Module (for 800 computer)
CX853 16K RAM Memory Module (for 800 computer)
XG-1 Light Gun (+ Bug Hunt cart.)

Subject: 6.4) What "vaporware" computers/peripherals were never released?

Atari was a HUGE company, dominating Silicon Valley, and included a massive
research and development department which famously designed many, many
products that never saw the light of day. Here is a brief listing of many
Atari hardware model designations known to have existed internally to the
company, but which were never sold and are extremely rare (if they ever
existed at all). For definitive information on unreleased Atari products,
see:

Atari Historical Society, http://www.atari-history.com/ (Curt Vendel)

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800D (Developers Bus System)
1000 Sweet 16 Project, lower end model. Became the 1200XL
1000-X Sweet 16 Project, higher end model. Became the 1200XL
1200 1200XL internally, many slight cosmetic differences
1200XLS 1200XL Show prototype, top-mounted cartridge slot
600 early 600XL, all black case, joyports on the left, missing PBI
800XL brown prototype
800XLD low-cost 1450XLD,no modem&speech,incl disk drive controller&FREDDIE
800XLCR Cost Reduced, with CGIA chip ("Keri"), which is a combined GTIA&ANTIC
900XLF early name for 65XE
1250XLD Earlier name for the 1450XLD
1400XL brown prototype
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL 1400XL plus room for 2 internal 5.25" drives(controller not included)
1450XLD 1400XL plus 5.25" floppy drive (Epson SD521 360K disk drives)
1600XL Amiga/Amiga-like.Now appears that 1850XLD was the model name for this
1650XLD to use 1450XLD case and 1200XL keyboard
1850XLD "Mickey" Atari clone of the Amiga Lorraine

65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMY sound chip

Atari 8-bit vaporware peripherals: (note some are more vaporous than others)
1027 PLUS -daisy-wheel, 80 columns
1053 -looks like a 1050, but supports DS/DD 360K format
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1060 CP/M Add-On Module -"SweetPea" Z-80 CPU, 64K RAM, CP/M 2.2, 80col display
1090 XL Expansion System-5 PBI slots, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor (Goldstar)
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XF351 -a 3.5" drive.
XC35 -an XF551 with a 3.5" mechanism
XTM201 -non-impact printer
XTC201 -XE Thermal Color Printer

Subject: 6.5) What are the power requirements for my Atari components?

Thanks to Matthias Belitz for the European data in this section. I need more international help!

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have.

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in voltamps or watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Direct Current (DC):
Power (in watts) = current (in amps) * voltage (in volts)

Alternating Current (AC):
Apparent Power (in voltamps) = current (in amps) * voltage (in volts)
Effective/True Power (in watts) = current (in amps) * voltage (in volts) * (cosine of the angle of lag)

N O R T H A M E R I C A INPUT = 115-120 V AC, 50/60Hz
==========
AC supplies (external transformers)

5 V DC 1.5 A (7.5 W) Atari#CO61982/CA024814
600XL,800XL,65XE,130XE,XE Game System
4 varieties, detailed by Ben Poehland in Current Notes v10n9 Nov 1990:
Type I: The Beauty Queen, 1983-84, made in Hong Kong
matches XL hardware, repairs easy
Type II: The Ugly Clunker, 1984-85, made in Taiwan
all black, external RF interference supression box,
entirely permanently sealed, unrepairable
Type III: The Black Beauty, 1985, made in Taiwan, uncommon
like Type I but all black, simplest design/easiest repairs
Type IV: The Peanut, 1985-?, made in Taiwan
black with silver plate, difficult/tedious repairs

6 V DC 300 mA (1.8 W) Atari#???????
"410P"

9 V DC 500 mA (4.5 W) Atari#CO16353/CA014034/CO10472/CX261
XEP80,SX212,2600 (center positive)

9.3 V DC 1.93 A (18 W) Atari#CO18187
Indus GT,5200

11.5 V DC 1.95 A (22 W) Atari#CA019141

M O R E I N F O
==========
These draw their power from the SIO +5 V:
XM301 (60 mA),XC11,XC12,ICD P:R: Connection,Wizztronics MidiMax,R-Verter

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410 (except "410P"),815,820,825,1025,1029,XMM801,XDM121

OTHER:
The ICD Multi I/O (MIO), all versions, can use both AC and DC supplies, BUT:
stick to voltages of at least 6.2-7.2 V.
On 2003.09.01 James Bradford wrote: "Doesn't matter what polarity the
centre is, the MIO has a fullwave bridge rectifer in it.
AC would be better because the diodes would be used half the time."
Indus GT: see Atari#CO18187 or CA019141 above. What happens if power
supplies for the Atari 1050 and Indus GT are mixed? Paul Alhart writes
(20 Jan 2004): "The Indus requires DC, the 1050 uses AC. Plug an Indus
supply into a 1050 and it will usually blow the rectifier diodes in the
1050. Plug an Atari supply into an Indus and it will blow the fuse in
the supply. It can damage the mother board as well."
Rana 1000: 9 VAC 3.4 AMPS
MPP1000C modem: 9 V DC 200 mA (1.8 W)

Subject: 6.6) What graphic tablets were produced for the Atari?

This section by Andreas Magenheimer.

- Atari Touch Tablet by Atari (came with Atari Artist cart., Micro Illustrator compatible),
- Koala Pad by Koala Industries (came with Koala/Micro Illustrator cart.);
- Powerpad by Chalkboard Inc. (came without software!); the following carts were available separately for the Powerpad: Micro Illustrator, Leo's Lectric, Micro Maestro, The Programmers Kit, Logic Games, Bear Jam (as refered to Antic, September 1984);
- Animation Station by Suncom (came with Micro-Illustrator cart.);

Subject: 6.7) What lightpens were produced for the Atari?

This section by Andreas Magenheimer.

- Atari Lightpen (came with Atari Graphics cart.; it produces pictures with 127 sectors in length, thus not Micro-Painter, nor Micro-Illustrator compatible; however appropriate converter programs can be found in the public domain, e.g. the Rapid Graphics Converter);
- Edumate Lightpen (came with a disk with 6 Basic programs; a program called Peripheral Vision was available separately from Future House);
- Tech-Sketch-Lightpen (came in two versions: a) the cheaper version which included a disk with Basic programs only and b) the more expensive version which included the disk with Basic programs and the Micro-Illustrator cartridge);
- MC-Pen-Lightpen (came with a disk with 4 Basic programs);
- Reston Lightpen (came with ???);

Note: these infos were taken from Antic, September 1984; I am not sure, if all these items were really available as listed...

Subject: 6.8) What lightguns were produced for the Atari?

This section by Andreas Magenheimer.

- Atari LG-1 Lightgun (came in two versions: a) complete with XEGS, keyboard, joystick, power supply, tv-cable, Lightgun, FS II cart and Bug Hunt cart all in one package and b) in a separate package, containing the Lightgun and the Bug Hunt cartridge); thats's why Bug Hunt does not have its own package, it was always included with the Lightgun package and/or the complete XEGS package...
- BEST Lightgun by Best Electronics (a sort of selfmade (?) Lightgun);
- Sega-Lightgun (normally not Atari compatible; but can be converted into an Atari compatible lightgun easily);
- other lightguns (most of these have to be converted)...

Note: After having 3-4 Atari and at least one (converted) Sega lightgun, it is my personal impression, that the Atari lightgun merely works ok on/with TV-sets (and not at all with a monitor), whereas the Sega lightgun works alright on TV's and (most) monitors. Since I never had a Best

lightgun I cannot comment on this one... (Andreas Magenheimer);

Subject: 6.9) What paddles were produced for the Atari?

This section by Andreas Magenheimer.

- Atari Paddles (usually a pair of Paddles);
- Telegames Paddles (available as a) a single paddle and b) a pair
of paddles);
- Reston Paddles (available as a) a single paddle and b) a pair
of paddles);
- and many others...

Note: Both single and duo (pair) paddles are compatible to each other,
using only one port-connector (only one joystick port). Thus, with a pair
of paddles you can connect up to 4 paddles (2 pairs) to the XL/XE models
and up to 8 paddles (4 pairs) to the Atari 400/800 models.

Subject: 6.10) What voice/sound synthesis hardware was produced for the
Atari?

This section by Andreas Magenheimer.

- Voice-Box II by The Alien Group (a software and hardware package);
- 1400XL/1450XLD Voice Synthesizer (built-in chip inside the extreme rare
Atari 1400XL/1450XLD models);
- Talk is Cheap by Ed Stewart, Antic Volume 2 Number 4, July 1983,
pages 64-66; hardware schematics only (a test/demo program is
mentioned in the text, but not printed in the magazine!);
- Cheap-Talk by Lee Brilliant, Analog Computing, issue 29, April 1985,
pages 59-67; hardware schematics and software demos, for example
"First Words");
- many other voice synthesizers (mostly selfmade and based on a chip by
National Semi Conductor);

Subject: 6.11) What sound-digitizers/samplers were produced for the Atari?

This section by Andreas Magenheimer.

- Parrot (2-Bit) by Alpha Systems, Anthony Ramos;
- Parrot-2 (2-Bit or 4-Bit?) by Alpha Systems, Anthony Ramos;
- 2-Bit Replay (2-Bit) by 2Bit-Systems Ltd.
- Sound N'Sampler (2-Bit) by Ralf David;
- Sound Digitiser (2-Bit) by Ralf David;
- Sound-Meister (2-Bit) by Irata;
- Sound-Digitizer (2-Bit) by Irata;
- Digitales Mikrofon (2-Bit) by Compyshop;
- Voice-Master (2-Bit) by Covox Inc.;

- Analog-Sample-Processor (2-Bit) by Steven Lashower (Analog Magazine);
- Atari-Sound-Sampler (2-Bit) by Andreas Binner and Harald Schoenfeld (german Atari magazin 1/1989, pages 44-49, complete with schematics, documentation, sample-program and assembler-source);
- Alphasys-Sound-Sampler cart. (4-Bit) by ANG/Mirage (released as a mono version; a stereo (two Pokeys!) version was promised/planned, but afaik never released);
- ARGS-XE-Sampler (8-Bit) by ABBUC regional group ARGS (only one or two prototypes exist, alas the hardware was never released due to lack of (sampling/digitizing) software; maybe a good idea for the hardware and software experts out there!);
- and many others ...

Subject: 6.12) What sound-enhancement upgrades were produced for the Atari?

This section by Andreas Magenheimer.

a) enhancements for stereo-sound:

- POPS, polyphonic-pokey-sound by Lee Brilliant (stereo-support with one Pokey!); refer to Analog Computing, issue 66, november 1988, pages 54-60; only 1-2 programs exist for this mod., see: 8.14 stereo-software for the Atari;

- stereo with two Ataris (and thus 2 Pokey chips); use computer/pokey 1 for the left channel and computer/pokey 2 for the right; no special hardware required for this trick (but specially programmed software!); see also: 8.14 stereo-software for the Atari;

- stereo with 2 Pokey chips (in one Atari!); refer to an article written by Chuck Steinman (which probably appeared in Atari classic?) on how to upgrade your Atari internally with a second Pokey chip; or ask Freddy Offenga for a deluxe-stereo-version, that uses a PCB instead of the piggy-back method. For a list of software that supports this mod. see also: 8.14 stereo-software for the Atari;

- Stereo-Blaster and Stereo-Phaser by Portronic/AMC-Verlag, these were hardware add-ons that connected via the monitor jack to the Atari and gave you "another" monitor jack and 2 cinch connectors to connect to the monitor and/or the hifi-system; various small paddles (4-10, depending on the model you have) make it possible to change amplitudes, frequencies, etc. and thus generate a "pseudo-stereo" sound. These add-ons also amplified the sound and thus made quality recordings of Atari sounds much easier. Alas, these hardware add-ons were quite expensive and thus not many (less than 100) were sold. Therefore no special software is required, every A8 sound can be changed or enhanced to "simulated-stereo"...

- Stereo-Blaster-Pro, a hardware add-on by Portronic/AMC-Verlag similar to Stereo-Blaster and Stereo-Phaser, but programmable! This add-on had only 1 small paddle, to amplify the sound-volume; the stereo-sound

could be generated via two simple Poke-Statements, a demo-disk therefore was included. Alas, not many items were sold and afaik no-one else programmed stereo-software for it. See also: 8.14 stereo-software for the Atari...

b) other sound enhancements:

- Covox-Sound-Enhancement, originally developed in Poland; with some electronic parts and pieces you can upgrade your Pokey's abilities, to playback any digitised/sampled sound with 8-Bit resolution, instead of its usual 4-Bit digi/sample playback resolution (see also 8.14).

- SID-upgrade, the SID is the standard sound-chip in the C64 computers. Some polish freaks/nerds have found a way to include it into an A8, but allthough I have seen quite a lot of pictures (for example at atariarea.nostalgia.pl) with this mod. and already found 1 or 2 programs that detect it (for example System Info 2.x by Draco), I have not yet found any schematics for this upgrade. Anyway, it exists, and with some programming skills it would surely be possible to write programs then, that playback SID sounds on those Ataris which have this upgrade installed...

- Amie/Amy sound-chip, the Amie sound-chip was originally produced by Atari and installed into the 65XEM computer. Alas, it was never available to the public and only very few prototypes of this 65XEM (maybe less than 10?) do exist. Besides of that RUMOURS say, that Atari had quite some problems with this soundchip and never finished it completely/successfully. If the rumours are true, then this soundchip provided many more sound channels, more octaves and even more and better sound power than two Pokeys together (for more infos take a look at this URL:)

- guess there are dozens of other sound enhancements, for example sound cards (like Adlib, etc.), sound-chips, midi-interfaces, etc. that could be attached or converted to the A8; I won't name them all here...(A.M.)

Subject: 6.13) What MIDI enhancements are there for the Atari?

This section by Andreas Magenheimer and Mathy van Nisselroy.

Midi is standard on the Atari ST computers, because it is built-in into these computers. Nevertheless, Midi was long before the arrival of the ST computers on the market and thus, it is no surprise that there are even midi-interfaces and enhancements for the classic 8Bit Ataris. The following "types" do exist:

- "Midi-Mate" and "Midi-Track" by Hybrid Arts (USA), comes with hardware + software, see reviews & tests in Antic, Analog and other magazines. MidiTrack requires 48k RAM, MidiTrack II 64k RAM and MidiTrack III 128k RAM (XE compatible, not Axlon compatible). MidiMate features MIDI IN+OUT and SYNC IN+OUT ports, but lacks a second SIO plug.

MMS (MIDI Music System) is a MIDI version of AMS, also sold by Hybrid Arts and comes with AMS to MMS converter software...

- "MIDI Master" by 2-Bit Software (UK), comes with hardware+software. Features MIDI IN+OUT ports, an extra SIO plug, but no SYNC ports. See also reviews and ads in (New) Atari User...

- "MIDI interface" by DIGICOMM (UK), comes with hardware + 'example programs'. Features MIDI IN, THRU and OUT ports. There`s no word about a second SIO plug or any SYNC ports. See also reviews and ads in (New) Atari User...

- "MIDIMAX" by Wizztronics (UK), comes with hardware and software. Features MIDI IN+OUT ports and a second SIO plug. The MMS software that comes with MidiMax requires 48k RAM and is fully compatible to the Hybrid Arts hardware+software. This means, one can use the software with both Midi-interfaces or use the interfaces with the software of both vendors...

- "Atari-Midi-Interface" by Karlheinz Metscher (appeared in the german magazine Computer Kontakt June/July 1986, pages 69-75, complete with documentation, schematics and its first program "Midi-Receiver"; in Computer Kontakt October/November 1986 appeared the second program, called "Midi-Disk" - a Midi Recorder and Player program);

- "Midi-Interface for Atari XL/XE" by Ireneusz Kuczek (appeared in the german ABBUC magazine, issue 65, pages 3-6); the paper-mag. includes a schematic for the midi-interface and some translated descriptions for the software (translated from polish to german language), whereas the disk-magazine contains the midi-programs "Midiplay Version 1.3" by I. Kuczek, "Midi-Recorder Version 1.2" by I.Kuczek, "Rec to Mid" by I. Kuczek (a converter program for the IBM-PC!), "Midi-Sequencer V.1.15" by Maciej Sygit and "Midi-Pattern-Editor MPE V.2.3" by Radek Sterba. These programs and many additional demo sounds are also available in the ABBUC PD library (PD numbers 625-632).

- guess there are several other (selfmade) midi-interfaces for the Atari 8Bit available, alas they also require a keyboard or synthesizer and self-created (or downloaded) midi-sounds can only be played back via such a midi-interface and the affore mentioned keyboard/synthesizer. As of yet, it seems there exists no midi-player program, that can playback any midi-sound via the Atari Pokey chip, nor any converter program, which can convert *.MID sounds into other Atari sound formats (that could be played back on the Atari then)...

Subject: 6.14) What graphics enhancements are there for the Atari?

This section by Andreas Magenheimer.

- some 80 column interfaces made by Atari and third parties. Allthough these interfaces are there to provide a better text display with 80

chars. per line, they can somehow be used as a simple graphic
enhancement; think I have seen a graphic demo for the XEP-80 device
somewhere, that used a higher graphic resolution in Gr. 0 or Gr. 8
and also provided some animation (not only text, but also graphics),
alas I don`t remember the name of that demo...;
- the ultra-rare 1090XL box and probably graphic cards for it (who-ever
owns this item, doesn't use it, who-ever would like to have + use it,
doesn't own it or cannot afford it!);
- more seriously: Antic and GTIA upgrade by Chuck Steinman. Afaik, an
article about that topic appeared in Atari Classic, since I do not own
it, I can merely speculate that it adds a second Antic and GTIA for
higher resolution and/or more colours...;
- many selfmade upgrades, using graphic chips or graphic cards from other
computers...

Subject: 6.15) What types of memory upgrades are there for the Atari?

This section by Andreas Magenheimer.

Just a short overview here, for a more detailed description (table), see
also 8.10 kinds of atari ramdisks (and 8.11 + 8.12 for programs that
support or require a ramdisk). The following memory enhancements do exist:
- Atari 400/800: ramdisks on memory boards, that fit into the normal
Atari 800 memory slots (Axlon and Mosaic types);
- Atari XL/XE: a) internal memory enhancements:
- piggy-back versions,
- professionel PCB versions,
- SIMM-module versions;
b) external memory enhancements:
- via XL-Parallel-Bus,
- via XE-Cart.port+ECI,
- Flash-ROM cart. versions,
- other Cartridge versions,
- RAM-Card versions,
- SIO-cartridge versions,
- ...
Note that many of these XL/XE memory enhancements are just hobbyist or
selfmade-projects. Most versions which use newer PC technologies
(Flash-ROM cart., RAM-Card, SIO-cart., etc.) are still under development!

Subject: 6.16) What networking hardware is there for the Atari?

This section by Andreas Magenheimer.

In the late 80`s and early 90`s an american "firm" called Dataque
developed some networking-computer-hardware to link two or more Ataris
together, so that multiplayer games are possible, where each user has
its own computer and tv/monitor screen. The hardware was/is computer
independant and will run fine on any Atari 8Bit computer (whereas most

software for it will only work on XL/XE computers). During a 3-4 year
period of development two different hardware add-ons were developed:

a) Gamelink-1: This hardware was developed in 1989/90. It links two
computers together via the joystick ports. It is limited to a maximum
of 2 computers and thus 2 or 6 players, meaning one free port per
XL/XE computer and 3 free ports per 400/800 computer. However, the
few existing games for this hardware merely support 2 players, no
matter, which computer you have...

b) Gamelink-2: This hardware was developed in 1991/92. It links 2 to 8
computers together via the SIO-port. One computer will then act as
the master and has to boot up the software (from tape, disk, harddisk,
etc.) first. Then all other "slave" computers connect to it and boot
off of this master computer (one after another of course). In Europe
we call this device "Multilink", mostly because of the games written
by Bewesoft (Jiri Bernasek) called Multi-Dash, Multi-Race, Multi-Worms.
A two-computer link-network can easily be done with one SIO cable, just
open the end of the SIO cable and exchange cables number 3 and 5. You
now have an easy two-computer (2-4 players) network-cable.

For some available software, that supports this networking-computer
hardware, see 8.16 which programs support networking computer hardware...

Subject: 6.17) Can I attach an ISA card to the Atari?

Yes, RoBu (Roland Buhler) of the Stuttgart ABBUC Regional Group has produced
project plans for an ISA-Bus Interface for Atari 800XL/130XE Computer, ARGS.
http://www.stud.uni-karlsruhe.de/~un55/Hardware/ISA-Interface/ReadME.html

Carsten Strotmann has released sourcecode showing how to access a Hercules
video card with the ISA-Bus Interface.
http://www.strotmann.de/twiki/bin/view/APG/PgmFardwDriverHerc

----

Subject: 7.1) What versions of the Atari Operating System (OS) are there?

Most of this section by permission from:
http://www.student.kun.nl/f.offenga/atari.htm or
http://members.chello.nl/taf.offenga/atari.htm

Atari 8-bit Operating Systems

(?) This information is missing. If someone can supply this info,
please write me an e-mail.

NOTES:
The 400/800 O.S's consist of three ROMs (two 4kB and one 2kB).
The 1200XL contains two ROMs for the OS (8k each), XL/XE's use a single
16k ROM and the 16k XEGS OS is stored in a 32k ROM (together with 8k
BASIC and 8k for Missile Command).

Origins of ROM information
~~~~~~~~~~~~~~~~~~~~~~~~~~
400/800 rev.A NTSC Could exist, since the PAL version exists and
rev.A is mentioned in the rev.B source code.
james adds (3/8/01):
Did exist! My parents bought me an Atari 400 w/ 410 back in 1981 for
entertainment when I was badly injured in a motorcycle accident. A
year or so later I paid good money ($40 USD or so?) to have the OS A
upgraded to OS B.
400/800 rev.A PAL All info found in two Atari 400's and Atari 800
ROM module CX801.P
400/800 rev.B NTSC Information from a ROM dump and the rev.B source
listing. The part numbers were listed in the
catalog from 'Best Electronics'. According to
'Mapping the Atari' rev.B ROMs have a 'B' at the
end of the part number, therefore I figure these
part numbers are from rev.B.
400/800 rev.B PAL Could exist, since the NTSC version exists and
there's some conditional PAL/NTSC assembly in
the rev.B source code
1200XL rev.10 PAL/NTSC All info found in an Atari 1200XL. The XL/XE
rev.2 source code refers to it as rev.10.
'Best Electronics' calls it rev.A.
1200XL rev.11 PAL/NTSC Refered to rev.11 by the XL/XE source code.
'Best Electronics' calls it rev.B.
XL/XE rev.1 All info found in an Atari 600XL

XL/XE rev.2 All info found in an Atari 800XL
XL/XE rev.3 All info found in an 800XE
XL/XE rev.4 All info found in an Atari XE Game System

O.S. Authors and dates
~~~~~~~~~~~~~~~~~~~~~
The following info is from the Atari XL/XE rev.2 source code.

Revision A (400/800)
D.Crane / A.Miller / L.Kaplan / R.Whitehead

Revision B (400/800)
Fix several problems.
M.Mahar / R.S.Scheiman

Revision 10 (1200XL)
Support 1200XL, add new features.
H.Stewart / L.Winner / R.S.Scheiman /
Y.M.Chen / M.W.Colburn 10/26/82

Revision 11 (1200XL)
Fix several problems.
R.S.Scheiman 12/23/82

Revision 1 (600XL/800XL)
Support PBI and on-board BASIC.
R.S.Scheiman / R.K.Nordin / Y.M.Chen 03/11/83

Revision 2 (600XL/800XL)
Fix several problems.
R.S.Scheiman 05/10/83
Bring closer to coding standard (object unchanged)
R.K.Nordin 11/01/83

Vapour-ware
~~~~~~~~~~~
The following OS roms originate from rare Atari 8-bit systems.
Since I don't own any of these (unfortunately), I don't have much
information about these roms. Who can help me?

I've got two 16K rom dumps from the 1450XLD. Both ID's are rev.3.
The first dated 3/23/1984 comes from the 'Pooldisk Too' CD-ROM
(filename: 1540os3.v0) and the second dated 6/21/1984 was send to
me by Nir Dary (filename: os1450.128). Main differences between
these two are in the first 3K ($C000 - $CBFF).

The XL/XE OS rev.3B is from an Atari from Arabia. It's probably based
on rev.3. There are changes in the fonts (Arab characters) and several
patches in the code. More info at:
http://www.savetz.com/vintagecomputers/arabic65xe/

~~~~~~~
Special thanks to Nir Dary for the rev.2 source code, rom dumps and
the 1200XL. It's in good hands.

~~~~~~
More info on what is maybe either the 1985 or 1987 XL/XE OS versions listed
above. From ST*ZMAGAZINE #36, Sept. 1, 1989 (as reprinted in PSAN Nov 89):
by Mark Elliot, Innovative Concepts
The following changes have been incorporated in the 130XE computer.

The O.S. has minor changes like:
A) The MEMORY TEST (from SELF TESTS) tests the extra 64K now! (in 4 squares)
B) Also, the MEMORY TEST checks the first 48K over TWICE as fast as before!
C) The KEYBOARD TEST has the F1-F4 keys missing on top. (function keys),
although the code that interprets them is probably there (like XEGS).
D) Also, it types out "COPYRIGHT 1985 ATARI" at the keyboard test, when all
tests are done. (compared to COPYRIGHT 1983 ATARI, before)
E) And, the O.S. chip itself, is on a 27256 EPROM, but only half of it is
used! (comprared to the original, which was on a 16K x 8 ROM, 27128 comp.
~~~~~~

Subject: 7.2) What is the ATASCII character set?

ASCII is an acronym for the American Standard Code for Information
Interchange. Pronounced ask-ee, ASCII is a code for representing English
characters as numbers, with each letter assigned a number from 0 to 127. For
example, the ASCII code for uppercase M is 77. Most computers use ASCII codes
to represent text, which makes it possible to transfer data from one computer
to another.

The 8-bit Atari computers use a modified version of the ASCII character set
called Atari ASCII, or ATASCII.

David Moeser produced this nice translation table.
Piotr Fusik corrected the description of Atari character 5.

ASCII TRANSLATION TABLE -- IBM & ATARI 8-BIT (ATASCII)

Subject: 7.3) What is Atari BASIC?

BASIC is an acronym for Beginner's All-purpose Symbolic Instruction Code.
Developed by John Kemeney and Thomas Kurtz in the mid 1960s at Dartmouth
College, BASIC is one of the earliest and simplest high-level programming
languages, incorporating components of FORTRAN and ALGOL.

In 1978 Atari contracted with Shepardson Microsystems, Inc (SMI) to create a
version of BASIC for their upcoming home computers. The following worked
together on the project, which resulted in Atari BASIC:

Paul Laughton (author of Apple DOS) - project leader, co-primary contributor
Kathleen O'Brien - co-primary contributor
Bill Wilkinson - floating point scheme design
Paul Krasno - implemented the math library routines following guidelines
supplied by Fred Ruckdeschel (author of the acclaimed text,
BASIC Scientific Subroutines)
Bob Shepardson - Modified IMP-16 Assembler to accept special syntax tables
Paul invented
Mike Peters - keypuncher/computer operator/junior programmer/troubleshooter

Three Revisions of Atari BASIC were produced: A, B, and C:
A - cartridge produced for use with the 400/800/1200XL
B - built-in to the 600XL/800XL, also produced on cartridge
C - built-in to the 800XL(late models)/65XE/130XE/800XE/XE Game System,
also produced on cartridge.

In order to find out what version you are running, at the READY prompt,
enter "? PEEK(43234)"

If the result is: You have Revision: Atari Part#:
162 A CO12402/CO14502
96 B CO60302A
234 C CO24947A

On versions A, B, and C, Greg Miller writes:
"Rev A had a number of bugs, not just the commonly described crash bug. Rev B fixed most (maybe all, I don't remember) of these, but in the process, they added a new bug. You see, the crashes were caused by a bug in one of OSS's memory move routines. When the bug was fixed, the fix mistakenly applied to a routine that actually worked in Rev A, causing the new lockup problem.

Rev C differs in only a few bytes. AFAIK, the only change was to remove the alteration made to the routine that was broken by Rev B.

Also concerning versions A, B and C, Russ Gilbert writes (3 Jul 2002):
"I've got an opinion on this, my opinion is wrong to 95% of Atari users.

B is a re-compile of A. C is a 12 byte patch to B.

I've used Atari BASIC for a millenium (?). B has less hangs and ridiculous stuff like losing DIMs and stuff. C hangs like a lot. I must admit I don't have very much experience with C as I go back to B after using C for a short time.

I prefer B. I know its foibles. Just LIST, NEW, ENTER, SAVE every 5 or 6 SAVEs. Also, 0 REM will help with ENTERs that aren't working (put a immediate 0 REM line before you ENTER.)"

Subject: 7.4) What are Atari DOS 1, DOS 2.0S, DOS 3, DOS 2.5, and DOS XE?

Here are short descriptions of the various Disk Operating Systems (DOS) versions produced by Atari for use with their 8-bit computers.

The original Atari DOS shipped with all 810 disk drives from 1979-1981. It consists of a single file, DOS.SYS, which is loaded into memory from disk on startup.
At the top of the menu screen it reads:
DISK OPERATING SYSTEM 9/24/79
COPYRIGHT 1979 ATARI
Unless you are a collector, you probably have no reason to work with DOS 1.
Trivia: The "N. DEFINE DEVICE" menu option does not work.
The DOS 1 disk is labeled: Atari 810 Master Diskette (CX8101).

DOS II Version 2.0S was shipped with all 810 disk drives, and early 1050 disk drives, from 1981-1983. It consists of two files:
- DOS.SYS is loaded into memory from disk on startup
- DUP.SYS, which contains the DOS menu, is loaded only when needed.
MEM.SAV can be employed to preserve the contents of memory to disk when DUP.SYS is loaded, so that the data can be restored to memory when exiting from the DOS menu. DOS 2.0S supports Atari's proprietary single-sided, single density 90K 5.25" floppy disk format only. DOS 2.0S represents the lowest common denominator of Atari DOS versions--you can be assured than any Atari disk drive for the 8-bit Atari can work with disks formatted with DOS 2.0S. DOS 2.0S can read disks written with DOS 1; the reverse is not the case. The DOS 2.0S disk is labeled: Atari 810 Master Diskette II (CX8104).

DOS II Version 2.0D was shipped with the rare Atari 815 Dual Disk Drive. Supports double-density disk drives; also supports single-density disk drives. The DOS 2.0D disk is labeled: Atari 815 Master Diskette (CX8201).

DOS 3 shipped with 1050 disk drives from 1983-1985. It was created in part to take advantage of the 1050's Dual-Density capability, by employing a single-sided, enhanced-density 128K 5.25" floppy disk drive format. Atari called this format "dual-density," but the Atari community quickly came to refer to this format as "enhanced-density" to better differentiate it from widely available 3rd-party truly double density disk drives and supporting versions of DOS. DOS 3 uses a disk format incompatible with DOS 2.0S. It included a utility to convert files from DOS 2.0S to DOS 3, but not back again. It used disk space less efficiently than DOS 2.0S. For these reasons and others, DOS 3 was not widely accepted by the Atari community, and like DOS 1 is not generally used except for curiosity's sake. The DOS 3 disk is labeled: Master Diskette 3 (DX5052).

DOS II Version 2.5 shipped with 1050 disk drives and early XF551 disk drives from 1985-1988. DOS 2.5 represented Atari's relenting to the masses, returning to DOS 2.0S compatability. DOS 2.5 very closely resembles DOS 2.0S, with just a few features added. It supports both DOS 2.0S single-density 90K formats, as well as an enhanced density 128K format for use with the 1050 disk drive. DOS 2.5 also includes a RAMdisk utility for use with the 128K 130XE computer, a utility to convert files from DOS 3 disks back to DOS 2.5, and other disk utilities. DOS 2.5 is just about as universal among Atari users as DOS 2.0S.

DOS XE shipped with XF551 disk drives from 1988-1992. Like DOS 3, DOS XE introduced a whole new format for Atari floppy disks; but unlike DOS 3, DOS XE also preserved general compatability with DOS 2.0S/2.5. DOS XE supports the full capabilities of the double-sided, double density 360K per 5.25" floppy disk XF551 disk drive, including that drive's high-speed burst mode. DOS XE also fully supports the 90K SS/SD capability of the 810 disk drive, the 128K SS/ED capability of the 1050 disk drive, the 180K SS/DD capability of most 3rd-party disk drives for the Atari, and a RAMdisk for use with the 130XE. Date-stamping of files is supported. DOS XE requires an XL or XE computer; it is not compatable with the 400/800 computer models. Even though DOS XE was critically well-received, and represented a substantial jump in capabilities over DOS 2.5, its arrival came so late in the crouded realm of Atari and 3rd-party DOS versions that it never achieved much acceptance among real users, and is now relegated to the same status as DOS 1 and DOS 3 before it. Before its release, DOS XE was widely known as "ADOS."

Subject: 7.5) What are MyDOS, SpartaDOS, and other popular DOS versions?

Section includes contributions by Andreas Magenheimer (most DOS 2 clone descriptions).

Atari DOS versions are very popular, but many 3rd-party DOS versions have also been developed over the years. Of these, MyDOS and SpartaDOS seem to be the most-used today.

MyDOS 4.53
==========
MyDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and
hard-drive support, along with many other "high-end" features.

MyDOS 4.53/3 was released as freeware by David R. Eichel on 1/1/90.
Defaults to a 3 character file length/free sector count instead of MyDOS's
normal 4. Supports multiple AUTORUNs at boot up (*.AR0 through *.AR9).
Supports Axlon RAMdisks.

MyDOS 4.53/4 is the same as 4.53/3, but uses a minimum of four characters in
the sector count just like most versions of MyDOS.

MYDOS 4.51 was developed by Wordmark Systems (Charles Marslett). Source code
is available as "abandonware" at: http://www.wordmark.org/

MYDOS 4.50 was released on 11/28/88, developed by C. Marslett & R. Puff
http://www.nleaudio.com/css/files/MYDOS45M.ARC

Mathy van Nisselroy's MyDOS page:
http://www-users.rwth-aachen.de/mathy.van_nisselroy/mydos.htm

SpartaDOS 3.2, 3.3, X (4.22)
============================
SpartaDOS is a completely different command-line DOS modelled after MS-DOS,
though it is perfectly capable of reading all Atari DOS and MyDOS disks.

There are many versions available. Hopefully this list will help keep them
all straight.

SpartaDOS X (SDX) cartridge

Greatly enhanced/expanded compared to disk- based SpartaDOS; completely
different source code. Several versions produced:
4.22 11-05-95 released by Fine Tooned Engineering (FTe)
4.21 7-10-89 released by ICD
4.20 2-06-89 released by ICD
4.19 1-16-89 released by ICD
4.18 10-29-88 released by ICD
4.17 ?-?-88 released by ICD

SpartaDOS Pro 3.3a, 3.3b, and 3.3c - 1994-

The SpartaDOS Pro 3.3 versions were developed by Stephen J. Carden, based upon
a dissembled copy of the older (more stable?) 3.2c release from ICD.
-- SpartaDOS Pro Ver 3.3a 3-Nov-94 -- Added MUX support and MS-DOS Commands.
Highspeed SIO routines NOT included. Recommended for use in emulators
(especially Xformer) only.
-- SpartaDOS Pro Ver 3.3b 25-Dec-95 -- Has two different SIOV handlers, one
for the MUX and one for the MIO.
-- SpartaDOS Pro Ver 3.3c 1995 -- Looks at your system and by checking it
determines what CIO handler to load, and has MS-DOS command set. Black
Box, MUX, and MIO are fully supported, though none of these are required.
-- SpartaDOS Pro Ver 3.3c 19-Dec-97 -- the same 3.3c produced on a 16K ROM

cartridge by Video 61.
-- SpartaDOS Pro Ver 3.3d -- exists, but is not in general release

According to Lance Ringquist:
K-Products contracted FTe to develop SpartaDOS Pro 3.3 for exclusive use and distribution with K-Products' BBS Express! Pro, to provide this BBS system with the most stable platform possible. As Video 61 now owns the rights to BBS Express! Pro, SpartaDOS Pro 3.3 is therefore now a product of Video 61.

According to Stephen Carden:
The SpartaDOS Pro 3.3 versions were never owned by K-Products, and are technically shareware owned by FTe, although FTe had no connection with the specific development of the 3.3 versions.

SpartaDOS 3.2g and 3.2gx - Dated 6/4/94.

Last official disk-based versions, released as shareware by Fine Tooned Engineering (FTe), who had purchased the rights from ICD. 3.2g is the primary version; 3.2gx differs only in that it locates the disk buffers under the OS to save RAM. 3.2gx is intended for use in systems that include a PBI device (MIO, Black Box); it is not compatible with BASIC XE or any other programs using RAM under the OS.

First shareware release from FTe: 3.2f.

Earlier major releases from the original developer, ICD: 3.2d, 3.2c, 2.3, 1.1

Only the SDX cartridges and the original version 1.1 are compatible with the 400/800 computer models; SpartaDOS 2.x, and 3.x require an XL/XE.

Many disk-based SpartaDOS versions are available for download here, Thunderdome, kept by SysOp Fox-1:
http://www7.brinkster.com/atari/ataridl/sdsys.htm

One source of SpartaDOS documentation is Russ Gilbert's page at:
http://my.en.com/~russg/

BW-DOS 1.30 and BW-DOS Update #2 - Released: 12/95 ("BeWe")
==========
Another popular, powerful DOS is BW-DOS, freeware by Jiri Bernasek. (it is pronounced "Bay Vay Dos") which is SpartaDOS compatible. Does not use any speeder internally, but comes with external XF551 speeder. Supports 4 drives and Ramdisk, comes with Ramdisk driver for XE compatible Ramdisks up to 1Megabyte; supports 4 densities: a) Single (90k), b) Enhanced/Medium (130k), c) Double (180k) and d) DSDD (360k); does not use any RAM under OS ROM; unlike SpartaDOS most commands are external, thus the DOS is only 5kbytes short; supports a PAL clock (made by ABBUC regional group "ARGS"); comes with many great utilities (which can also be used with SpartaDOS); paper printed German and disk printed English docs are avaiable; latest version 1.3 is avaiable as Freeware...

The other DOS varieties mentioned below are all, like MyDOS, Atari DOS-2 clones and thus DOS-2 compatible; avaiable as PD or Freeware...

TOP-DOS 1.5+
============
Carolyn Hoglin writes:
This superior DOS was written by R. K. Bennett of Eclipse Software in Sunnyvale, CA. It was based on Atari DOS, but with many, many more features. It fully supports my double-density, double-sided Astra drives, automatically sensing the proper density and sidedness of both drives 1 and 2. (MYDOS only seemed to do that on drive 1.) Also supported are large ramdisks for Axlon, Mosaic, etc. The latest version was TOP-DOS 1.5+, which came with an excellent manual explaining how to use its powerful capabilities.

SuperDOS 5.1
============
supports 4 formats SD/ED/DD/DSDD; supports 256k Xtra RAM/RD; supports 4 speeders: Happy+Speedy+XF551+US Doubler and its compatibles; has an AUX.SYS file with option to use / not use RAM under OS ROM; has unfortunately a very slow Ramdisk;

BiboDOS 5.4 and 6.4
===================
3 versions avaiable, one without speeder - 5.4NT, one with Happy/Speedy support 5.4HS and one with XF support 6.4XF; supports 4 formats / up to 360k; supports 256k Xtra Ram / RD; the DUP.SYS uses RAM under OS ROM, thus Turbo-BASIC must load without DUP;

Turbo-DOS 2.1
=============
Master-Disk produces 4 different versions: 2.1NT without speeders, 2.1HS for Happy/Speedy, 2.1XF for XF551 and 2.1EX for 3 speeders: Happy+Speedy+XF551; supports 256k Xtra RAM / RD and supports use of batchfiles; has converter for DOS 3 and DOS 4; supports 4 formats, up to 360k; does not use RAM under OS ROM; DUP uses a Command Processor; all commands are avaiable via HELP key; works with XL/XE computers only, does not load/boot on Atari 400/800 no clue why;

Subject: 7.6) How do I modify Atari DOS to support more than two drives?

Russ Gilbert writes:

DOS 2 type DOSes default to two drives.
Boot DOS and BASIC.
? PEEK(1802)
if it is 3 then you only recognize two drives.
To get the 3rd drive, poke 1802,7. Then go to dup.sys (type DOS)
and write system files. Next time you boot that DOS, you'll recognize
3 drives.
If you want four drives, poke 1802,15.

Subject: 7.7) Are there Graphical User Interfaces (GUIs) for the Atari?

Contributors: Andreas Magenheimer, Mathy van Nisselroy, Kathleen Ferrante

- Diamond GOS version 1 (a cart and a PD demo-disk-version do exist), version 2 (cart only), version 3 (cart only); plus some applications (painter program, text program, etc.); Diamond GOS has been made freeware by the author Alan Reeve;

- G.O.S., the Graphic operating system by Total Control systems; two different versions are avaiable (I call them GOS 1 and GOS 2) and they are PD;

- G.O.E., the Graphic Operating Environment also by Total Control Systems (this one merely works under Sparta DOS, not with Bewe-DOS and not at all with DOS 2.x); so far I have found 3 different versions (GOE 1,2,3) with some applications (graphic/painting program, etc.); PD;

- S.A.M., the Screen Aided Management (unfortunately it has the same name as SAM, the software aided mouth) from PPP/Germany. It is avaiable in two different versions: a) the type-in listing from Atari magazin and/or the Lazy finger disks (which are PD!) or b) the commercial version 2.0 which has many add-ons and can still be bought from Dean Garaghty/UK or PD-World-Versand/Germany; This GUI merely works correct under DOS 2.5 and Medium/dual density, however...

- BOSS-XL, the XL-Desktop from Mirko Sobe; written in Turbo-BASIC; freeware; http://www.atarixle.de/

- BOSS-XE, the XE-Desktop from Mirko Sobe; written in Turbo-BASIC;freeware, http://www.atarixle.de/

- BOSS-X the newest desktop version from Mirko Sobe, needs an 128k+ Computer (128k or more memory), supports MyDOS up to 16MB and MyDOS subdirs...; still written in Turbo-BASIC; many applications and drivers; freeware; http://www.atarixle.de/

- XL-TOS a small and "cheap" GUI version from Atari magazin (i.e. a type-in listing; the BASIC file, which consists of many data lines creates a short object code file); unfortunately this GUI only looks good, it loads almost nothing... PD;

- ST-TOS a small BASIC program, that looks like a GUI; it can merely load BASIC files and do a few DOS commands, like lock, unlock, delete and such... (PD)

- BASIC desktop, a GUI written in BASIC just as a sample, what can be done with an 8-bit computer; this one loads BASIC and text files (maybe also ML files); PD;

- DCS, the desktop construction set from Tom Hunt; there are 3 different versions avaiable, a) for DOS 2.5, b) for MyDOS andc) for Sparta-DOS; I have tested the Sparta DOS version, which worked with batchfiles and could easily load some ML files, text files and BASIC files (which were already on the DCS disk); it also works with high densities and/or hard disk partitions up to 16MB and supports subdirs of course; hmm, freeware or shareware ?!?

- ATOS - GUI by Tom Hunt/Closer To Home. http://cth.dtdns.net/atos/
1) Lets you use any demo or intro as a screen saver!!
2) Works with all Atari hardware, BB, MIO and Hard drives, SpartaDOS support
3) Lets you run files like full games and demos and then
return back to the desktop. It uses Overlays.

- Atari Desktop by ABC software (Poland), includes editors, converters,
file copiers, sector copy, tape+turbo tape copy, small games, CMC finder
and player and much much more; works with 64k RAM and keyboard input;
disk manuals only in polish language...

- Windows XL a Turbo-BASIC GUI with some nice add-ons, like calculator, editor
and other things. written in 1986-1988 by Joerg Forg.

- there are a lot more GUI programs, however many of them are written in BASIC
or Turbo BASIC and are very restricted; most of them merely look like a GUI
but need to much memory for everyday use. Thats why most users still prefer
those DOS or Gamedos (Gameloader, Multiloader, etc.) programs...

Subject: 7.8) What should I know about modem device handlers?

In order to use a modem on the Atari, a modem software handler, or R: device
handler, must be loaded into memory.

There are several families of R: handlers, corresponding to the different ways
in which a modem may be attached to the Atari.

Except for family #7 below, these handlers are used in one of two ways.
Either they are (A) loaded into memory from DOS just before running the main
terminal application, or (B) the terminal program is appended to the handler,
so that in practice, a single file is loaded from DOS which contains both the
R: device handler and the application itself.

1) 835/1030/XM301 modems. Atari-only modems, interface via SIO

2) MPP/Supra modems. Atari-only modems, interface via joystick port

3) R-Verter cable. Connect standard Hayes-type modems via SIO
/ SX212 modem. A Hayes-compatible modem, interface via SIO

4) SWP ATR8000 interface. Standard Hayes-type RS232 modems via this interface.

Richard Anderson writes (Oct 2 02):
Mine originally came with a driver program; and, I believe, a BASIC program
to set up the driver from BASIC. Later they shipped with a special version
of MyDOS with the R: handler built in.

5) 850 Interface/P:R: Connection, internal

This type of "mini handler" simply loads the R: device handler code from a ROM
chip inside the RS232 serial interface. A long beep is heard through the
speaker when the handler is loaded into the computer's RAM.

Many varieties of DOS for the Atari include an explicit provision for loading this type of R: handler into memory from the 850 or compatible interface.

Also, this type of R: handler is automatically loaded when any 8-bit Atari computer is turned on with a P:R: Connection or powered 850 connected, but no powered disk drive is present.

6) 850 Interface/P:R: Connection, external

Used with the 850/P:R: Connection in place of these interfaces' built-in handlers.

7) MIO/Black Box interfaces, internal

These interfaces utilitize the PBI or ECI parallel ports on the Atari. They include their own R: handlers in ROM, using no computer RAM at all.

8) MIO/Black Box interfaces, external: Len Spencer's Hyperspeed

This handler is "optional" for the Black Box, but "essential" for the MIO in order to take full advantage of the high-speed hardware handshaking capabilities of these two interfaces.

Hyperspd.arc is available at http://members.aol.com/lenspencer/atari8.htm

---

Subject: 8.1) What programming languages are available for the Atari?

This section is by Freddy Offenga.

Revision : 1.9
Date.... : 2004-3-30

==========
The goal is to give information about all available languages
for the Atari 8-bit computer. This information includes:
title, last version, author, date and a short description.
It would also be nice to know how to get it and where to get
more information (like reference cards, reviews and such).

Maintainer: Freddy Offenga
Email : taf.offenga [at] chello.nl (replace " [at] " with "@")
URL : http://members.chello.nl/taf.offenga/atari.htm

==========

There are quite a lot! To get some structure in this section it's
divided into the following categories;

a) ASSEMBLER
b) BASIC
c) C
d) PASCAL
e) LISP
f) FORTH
g) PILOT

h) LOGO
i) All the rest

The following format is used:

- Language titel (medium)
version, year : version, year
author/company : author/company
available..... : where/how to get it
package....... : programs, documentation
features...... : main features
Description.

The question marks (?) indicate that more information is
required about that topic.

Credits
=======
- The Multi-lingual Atari, Analog magazine 45, August 1986
- A bunch of manuals
- Some copy-pasted lines from the Atari 8-bit newsgroup
- umich (University of Michigan Atari archive)
- David Wyn Davies (PL65)
- Kevin Savetz (APX titles)
- Maury Markowitz
- Michael Current
- JT (ValForth)
- Andreas Magenheimer
- Winston Smith
- Carsten Strotmann

Revision history
================

1.9
- X-Assembler updated
- Added "QS FORTH" info from Winston Smith
- Added FORTH section work from Michael Current (thanks to Carsten Strotmann)
(see also: http://www.strotmann.de/twiki/bin/view/APG/LangForth)
- Several updates in the assembler section

1.8
Thanks to Adreas Magenheimer for these updates:
- Added "Mesa-Forth"
- Added "130XE Assembler 4.32"
- Updated "SynAssembler"

1.7
Thanks to Maury Markowitz for these updates:
- Updated "A BASIC Compiler"
- Added "Der BASIC Compiler", "MMG BASIC Compiler"
- Added "Frost BASIC", "TT-BASIC XL"

1.6
Synchronized with Atari 8-bit FAQ May-2002 :
- Added "X-Assembler"
- Added "CTH Fast Basic"
- Added availability for "Deep Blue C"
- Added availability for "Atari Pascal"
- Ignored changes "Kyan Pascal" (need more info)
- Updated "ValForth"
- Updated "Extended fig-Forth"
- Updated "fun-Forth"
- Added "Extended WSFN"
- Removed e-mail addresses
- Added availability for "A65"
- Updated "PL65"

1.0 .. 1.5
Changes not noted.
Old versions are available on request.

a) ASSEMBLER

- 130XE Makro Assembler (disk)
version, year : 4.32, ?
author/company : Torsten Karwoth
available..... : freeware, ABBUC PD #297
package..... : assembler, editor, menu, monitor,
batch enhancement, linker/packer
features..... : macros
Two pass 6502 assembler with integrated menu, editor
and monitor shell for 128KB RAM Ataris. Source format
is derived from Atmas Makroassembler.

- 130XE+ Makro Assembler (disk)
version, year : 2.2, 1992
author/company : Torsten Karwoth
available..... : freeware, ABBUC PD #368
package..... : assembler, editor, menu, monitor,
batch enhancement, linker/packer
features..... : macros
New version with 128KB - 1088KB RAM support.
Two pass 6502 assembler with integrated menu, editor
and monitor shell. Needs extra RAM banks. Source
format is derived from Atmas Makroassembler.

- A65 (disk)
version, year : ?, 1989
author/company : Charles Marslett, WORDMARK Systems
available..... : abandonware, http://www.wordmark.org/
package..... : assembler, manual
features..... : source include
Two pass 6502 assembler. Source format is based on the
Atari Macro Assembler. Assembler source included.

- Alfasm, Turbo-Assembler/16 (disk)
version, year : 1.0, 1990
author/company : Jeff Williams, DataQue Software
available..... : ?
package..... : assembler, docs
features..... : source include
Two pass 6502/65816 assembler.

- Assi (download)
version, year : 0.0.41, 2000
author/company : MacFalkner
available..... : http://members.aol.com/macfalkner/atariindex.htm
package..... : assembler, file linker
features..... : source include, data include, code relocation
Cross assembler for Win32. Source code is highly compatible with
Atmas for the Atari.

- Atari Assembler/Editor (cart)
version, year : ?, 1981
author/company : Atari
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : -
Two pass 6502 assembler with integrated editor/monitor

- Atari Macro Assembler (disk)
version, year : 1.0C, 1981
author/company : Atari, APX
available..... : ?
package..... : assembler, editor, debugger, manual
features..... : macros, source include
Two pass 6502 assembler.

- ATasm (disk)
version, year : 0.92, 1999
author/company : Mark Schmelzenbach
available..... : umich
package..... : assembler
features..... : macros, source include, optionally target .XFD
disk images and machine state files (Atari800 / Atari800Win),
conditional assembly. Two pass 6502 portable cross assembler.
Highly compatible with MAC/65.

- Atmas Makroassembler (disk)
version, year : 2, 1985
author/company : Peter Finzel, Hofacker
available..... : ?
package..... : assembler, editor, monitor, manual
features..... : macros
Two pass 6502 assembler with integrated editor/monitor.

- Bibo Assembler (disk)
version, year : 1.0, 13/12/1986

author/company : E.Reuss, Compy-shop
available..... : ?
package....... : assembler, editor, monitor
features...... : source include, data include
Two pass 6502/65c02 assembler with integrated editor/
monitor.

- Datasm/65 assembler (disk)
version, year : 2.0, 1981
author/company : DataSoft Inc.
available..... : ?
package....... : assembler, editor, menu, manual
features...... : -
Two pass 6502 assembler.

- EASMD (disk)
version, year : 1.0, 1981
author/company : OSS
available..... : ?
package....... : assembler, editor, monitor
features...... : ?
Two pass 6502 assembler with integrated editor/monitor.

- Fast Assembler (disk)
version, year : 1.5, 1995
author/company : MMMG Soft
available..... : ?
package....... : assembler, editor, disassembler
features...... : ?

- Kasm65 (disk)
version, year : 2.51, 1997
author/company : Ken Siders
available..... : shareware, umich
package....... : assembler, editor, linker, docs
features...... : macros, relocation, source include,
conditional assembly
Two pass 6502 assembler. Relocatable object files are
compatible with ra65. Source format is derived from
the Atari Macro Assembler.

- MAC/65 Macro Assembler (disk|cart)
version, year : 1.01, 1984
author/company : Stephen D. Lawrow, OSS
available..... : ?
package....... : ?
features...... : ?

- MAC/65 Macro Assembler (disk|cart)
version, year : 2.00, 1982
author/company : Stephen D. Lawrow, OSS
available..... : ?

package..... : assembler, editor, monitor, manual
features..... : macros, source include
Two pass 6502 assembler with integrated editor/monitor.
Mac/65 is a direct descendant of the Atari Assembler/
Editor (via EASMD).

- MAC/65 Macro Assembler (disk)
version, year : 4.20, 1994
author/company : Stephen D. Lawrow, Fine Tooned Engineering
available..... : ?
package..... : ?
features..... : ?

- MAC/65 Macro Assembler (disk)
version, year : 4.20 demo version, 1982
author/company : Stephen D. Lawrow, OSS
available..... : ?
package..... : ?
features..... : ?

- MAE (disk)
version, year : .96, 1996
author/company : John Harris
available..... : umich
package..... : assembler, menu, editor, monitor, docs
features..... : macros, source include, data include,
conditional assembly
Two pass 6502/65816 assembler with integrated editor/
monitor. Extra RAM supported.

- NASM65 (disk)
version, year : ?, 1992
author/company : Nat!
available..... : ?
package..... : assembler, linker, librarian
features..... : macros, relocation, source include
One pass 6502 portable cross assembler (initially for
the ST). Highly compatible with MAC/65.

- PC-65 (disk)
version, year : 1.0 beta, 1996
author/company : Jan Feenstra & Freddy Offenga
available..... : -
package..... : assembler
features..... : macros, source include, data include,
boundary directive
Two pass 6502 cross assembler for PC/DOS. The source
format is highly compatible with the ST-65 assembler.

- Quick Assembler (disk)
version, year : 1.0, 1990?
author/company : JBW, Avalon?

available..... : ?
package....... : assembler, editor, menu, debugger
features...... : source include
Two pass 6502 cross assembler with integrated editor.
Very user friendly menu environment.

- Ra65 (disk)
version, year : 1.0, 1989
author/company : John R. Dunning
available..... : public domain, umich
package....... : assembler, linker, librarian
part of cc65 (c-compiler)
features...... : ?

- Synassembler (disk|cart)
version, year : 4.0, 1982
author/company : Steve Hales, Synapse Soft
available..... : http://www.atariland.com/members/oldatarian/
package....... : assembler, editor, monitor, manual
features...... : source include
Two pass 6502 assembler.
An Adaptation by Steve Hales of the S.C. Assembler II.

- ST-65 (disk)
version, year : ?, 1991
author/company : A. Stauffenberg, F. Offenga
available..... : -
package....... : assembler, menu shell, manual
features...... : macros, conditional assembly,
source include, data include,
boundary directive
Two pass 6502/65c02 cross assembler for the Atari ST
written in 68000 assembly. As far as I know this is
the first assembler with the boundary directive.

- Xasm
version, year : 2.5.2, 2002
author/company : Piotr Fusik
available..... : http://xasm.atari.org
package....... : assembler, docs
features...... : conditional assembly, source include,
binary include, pseudo commands,
pseudo addressing modes
Two pass 6502 cross assembler for PC/DOS. The source
format is backward compatible with Quick Assembler.

b) BASIC

- A BASIC Compiler (?)
version, year : 1.05, 1987
author/company : Monarch Data Systems
available..... : ?

package..... : BASIC compiler
features..... : ?

- Advan BASIC (disk)
version, year : ?, ?
author/company : Advan Language Designs
available..... : ?
package..... : BASIC compiler
features..... : ?

- Atari 800 Basic (disk)
version, year : 1.0, 1981
author/company : Microsoft
available..... : ?
package..... : ?
features..... : ?

- Atari BASIC (cart)
version, year : Rev.C, 1983
author/company : Atari
available..... : standard ROM in Atari XL/XE
package..... : BASIC interpreter, manual
features..... : pretty plain BASIC implementation

- Atari Microsoft BASIC II (cart)
version, year : ?, 1991
author/company : Atari
available..... : ?
package..... : BASIC interpreter
features..... : ?

- BASIC A+ (disk)
version, year : 3.05, 1981
author/company : OSS
available..... : ?
package..... : BASIC interpreter
features..... : ?

- BASIC XL (cart)
version, year : ?, ?
author/company : OSS
available..... : ?
package..... : BASIC interpreter
features..... : ?

- BASIC XE (cart)
version, year : ?, 1985
author/company : OSS
available..... : ?
package..... : BASIC interpreter
features..... : ?

- CTH Fast Basic (disk)
version/year : ?
author/company : Tom Hunt/Closer to Home
avaiable.......: PD, Freeware or Shareware;
package........: language plus several test files
and examples; english docs;
features.......: faster than Atari Basic, not much
slower than TB, does not use Ram under OS;
avaiable at Tom Hunt's homepage or elsewhere...

- Der BASIC Compiler (?)
version, year : ?, 1983
author/company : Datasoft
available..... : ?
package....... : BASIC compiler
features...... : ?

- Frost BASIC (?)
version, year : 1.04, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package....... : BASIC interpreter, compiler
features...... : ?
Version of Turbo Basic XL that runs on 48k machines (400/800).

- MMG BASIC Compiler 2.0 (?)
version, year : 2.0, 1984
author/company : Special Software Systems
available..... : ?
package....... : BASIC compiler
features...... : ?
It appears that this is a newer version of Der BASIC Compiler,
licensed to some other company.

- TT-BASIC XL (disk)
version, year : 2.11, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package....... : BASIC interpreter, compiler
features...... : ?
Published in the German magazine "Happy Computer".
Appears to be a newer version of Turbo Basic XL.

- Turbo Basic XL (disk)
version, year : 1.5, 1985
author/company : Frank Ostrowski, Happy Computer
available..... : ?
package....... : BASIC interpreter, compiler (V1.1)
features...... : ?
Published in the German magazine "Happy Computer".

c) C

- ACE C (disk)
version, year : ?
author/company : John Palevich & Ralph Walden
available..... : ?
package..... : ?
features..... : ?
This is a newer version of 'Deep Blue C'.

- C/65 (?)
version, year : ?
author/company : OSS
available..... : ?
package..... : ?
features..... : ?
Probably derived from Dr.Dobbs "Small C". Compiles to 6502
code which emulates the 8080 instruction set.

- C65 (?)
version, year : ?
author/company : Keith Ledbetter
available..... : ?
package..... : ?
features..... : good macro assembler
This compiler does not support structs.

- CC65 (disk)
version, year : 1989
author/company : John R. Dunning
available..... : umich archive,
http://www.umich.edu/~archive/atari/8bit/Languages/Cc65/
package..... : compiler, linker, assembler, librarian
features..... : ?
Public domain compiler. Also used as cross compiler.
Relocatable object linkage files, and the most thorough
K&R C for the 8-bit. Comes with an relocatable assembler.

- CC8 (disk)
version, year : 2.3
author/company : John Palevich & Steve Kennedy
available..... : ?
package..... : Compiler
features..... : ?
ACE C with more "real" C support (e.g. arrays of pointers
to structs). Requires ACE C runtime libs and linker.

- Deep Blue C (disk)
version, year : 1.2, 1982
author/company : John Palevich, APX
available..... : http://www.atariarchives.org/APX/showinfo.php?cat=20166
Source code "Deep Blue Secrets" downloadable at
http://www.atariarchives.org/APX/showinfo.php?cat=20179
package..... : Compiler, Linker
features..... : ?

Deep Blue C was originally an independent product, but it
then became available from APX. It converts C to pseudo-
code and then interprets the pseudo code (8080 instruction
set emulation).
Drawn from Ron Cain's public domain C-compiler (Small-C).

- DVC C (disk)
version, year : 1.05, 1985
author/company : Ralph E. Walden
available..... : ?
package....... : Editor, Compiler, Optimizer, Linker
features...... : Quite user friendly program
The compiler generates special object files (.CCC)
which can be optimized and linked. The package uses a
special DOS called DVC DOS which contains runtime stuff.

- LightSpeed C (disk)
version, year : 1.08, 1986
author/company : Clearstar Softechnology
available..... : ?
package....... : Compiler, Optimizer, Linker
features...... : ?
Runs under CLI DOS's and MENU DOS's.

- Tiny-C
version, year : ?
author/company : OSS
available..... : ?
package....... : ?
features...... : ?
First sold C compiler by OSS. This compiler was used to
compile itself! First true language "bootstrap" on any
8-bit machine (it was also available for Apple and CP/M
machines). Derived from Dr.Dobbs "Small C". Compiles to
6502 code which emulates the 8080 instruction set.

d) PASCAL

- Atari Pascal (disk)
version, year : 1.0, 1982
author/company : APX
available..... : APX-20102
Information at http://www.atariarchives.org/APX/showinfo.php?cat=20102
package....... : ?
features...... : ?
Needs two drives.

- Draper Pascal (disk)
version, year : 2.1, 1989
author/company : Norm Draper
available..... : ?
package....... : ?

features..... : ?

- Kyan Pascal (disk)
version, year : 1986
author/company : Kyan Software, APX
available..... : ?
package..... : editor, compiler, linker, macro-assembler
and manual
features..... : ?
Kyan Pascal would run off a single floppy. The Atari (APX)
version needs two drives. A version which runs entirely in
128k should be available too.

e) LISP

- INTER-LISP/65 (disk)
version, year : 2.1, 1981
author/company : Special Software Systems, DataSoft
available..... : ?
package..... : ?
features..... : ?

- INTER-LISP/65 (disk)
version, year : 2.2, 1982
author/company : Special Software Systems, DataSoft
available..... : ?
package..... : ?
features..... : ?

f) FORTH

- ES-FORTH
version, year : 1.2, 1984
author/company : The English Software Company
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthESForth
package..... : ?
features..... : ?
Seems to be based on fig-FORTH, but with some unique "Words".
Works with normal DOS.

- Extended fig-FORTH, (disk)
version, year : 11/10/1981
author/company : Patrick Mullarky, APX
available..... : APX-20029
http://www.atariarchives.org/APX/showinfo.php?cat=20029
package..... : ?
features..... : ?

- Extended fig-Forth (disk)
version, year : 1.1 Rev. 2.0, 01/15/82
author/company : Patrick Mullarky, APX
available..... : APX-20029

http://www.atariarchives.org/APX/showinfo.php?cat=20029
package..... : ?
features..... : ?

- fig-FORTH
version, year : 1/26/81 and 4/01/82 releases
author/company : Steven R. Calfee "Team FORTH"
available..... :
http://www.atariarchives.org/APX/showinfo.php?cat=unknown_fig
package..... : ?
features..... : ?

- fig-FORTH
version, year : 4/10/82
author/company : Peter Lipson / Robin Ziegler "Team FORTH"
available..... : ?
package..... : ?
features..... :
based on 4/1/82 release of fig-FORTH by Steve Calfee

- fig-FORTH
version, year : 5/5/82 - 10/16/82
author/company : Harald Striepe "Team FORTH"
available..... : ?
package..... : ?
features..... :
based on 4/10/82 release of fig-FORTH by Lipson/Ziegler

- fig-FORTH, Antic (disk)
version, year : 1.4S REV.H, 18Jun85
author/company : John Stanley/Antic Magazine "Team FORTH"
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthAntic
package..... : ?
features..... :
based on 10/16/82 release of fig-FORTH by Striepe

- fun-Forth (disk)
version, year : ?
author/company : Joel Gluck, APX
available..... : APX-20146
http://www.atariarchives.org/APX/showinfo.php?cat=20146
package..... : ?
features..... : ?

- Grafik-FORTH
version, year : 1990
author/company : RAI Production
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthGraphicForth
package..... : ?
features..... : ?

based on fig-FORTH 1.4S and TURBO-GRAPHICS-SYSTEM 256

- MesaForth
version, year : 12/03/81
author/company : ?
available..... :
http://www.strotmann.de/twiki/bin/view/APG/LangForthMesa
package..... : language, source code, documents, examples
features..... :
based on 6502 fig-Forth. The major difference is in the size of the
screen on disk (512 bytes instead of 1024 bytes).
Runs under ATARI DOS 2.0S.

- QS FORTH
version, year : 1.0, 3/27/81
author/company : James Abanese / [QS] Quality Software
available..... : http://www.strotmann.de/twiki/bin/view/APG/LangForthQS
package..... : Editor, Assembler, I/O routines
Single Density 5.25 Floppy and Manual in Binder
features..... : Editor, Assembler, I/O Routines.
based on fig-FORTH.

- Turbo-4th
version, year : January 1985
author/company : Steven R. Calfee
available..... : ?
package..... : ?
features..... :
compatible with fig-FORTH and Team FORTH. It's fast.
Not threaded, it is a true compiler

- ValForth (disk)
version, year : 1.1, 1982
author/company : Valpar International
available..... : ?
package..... : (8) disks in the set including: 1)master disk,
2)display formatter, 3)text compression and auto text formatting,
4)valDOS-I, 5)valDOS-II, 6)player-missile graphics, character editor and
sound editor, 7)general utilities and video editor, 8) Turtle &
valGraphics and advanced floating point routines.
features..... : ?
based on fig-FORTH

- X-FORTH
version, year : 26 Jan 2003
author/company : Carsten Strotmann
available..... : http://www.strotmann.de/twiki/bin/view/APG/ProjXForth
package..... : binary, source, disk image with samples & editor
features..... : aims to be compatible with new ANSI standard.
works with normal DOS.

g) PILOT

- Atari PILOT (cart)
version, year : 1980
author/company : Atari
available..... : ?
package....... : ?
features...... : ?

h) LOGO

- Atari LOGO (cart)
version, year : 1983
author/company : LCSI, Atari
available..... : ?
package....... : ?
features...... : ?

i) All the rest

- Action! (cart)
version, year : 1983
author/company : OSS
available..... : ?
package....... : compiler, editor, monitor and library
features...... : fast compiler which generates good code
Needs cartridge for runtime procedures. A PD runtime
library is also available.
All variables are static, so recursive routine calls
are not possible. No floating point type (though a
PD library should make this possible). No arrays of
objects (arrays of POINTERS to objects are possible).

- Extended WSFN, WSFN = Which Stands For Nothing
version, year : ?
author/company : Harry Stewart, APX
available..... : APX-20026
package....... : ?
features...... : ?
Info at http://www.atariarchives.org/APX/showinfo.php?cat=20026

- Quick (disk)
version, year : 2.0, 1990
author/company : Raindorf Soft
available..... : ?
package....... : ?
features...... : ?
This is the "poor man's Action!". Same restrictions as
Action! apply also to Quick. Further restrictions are:
only simple assignment expressions, no records and no
pointers.

- PL65 (disk)
version, year : 1.0, 1987
author/company : Noahsoft

available..... : commercial, Extremely rare.
package..... : compiler, editor, library, sample game
features..... : Similar features to Action with same restrictions.
Highly flexible language that includes inline assembler features and
pointers. Robust and well-engineered editor. Does not require
additional runtime library - automatically generated and included in
the compiled code during compilation.

- Test Computer Language (disk)
version, year : 2.2, 1985-1990
author/company : D.Firth
available..... : public domain, ?
package..... : compiler and editor
features..... : ?

Subject: 8.2) What cartridges were released for the Right Slot of the 800?

Contributors: Gene, Larry White, others

Austin Franklin Austin 80 Console Software
Eastern House KISS
Eastern House Monkey Wrench
Eastern House Monkey Wrench II
Geminisoft/Sar-An Magic Dump
Geminisoft Magic Dump II
Radical Systems Cartridge Maker (eprom burner)
Block (first right cart/first "backup" program hardware device)
R-Time 8 ICD (battery-backed clock, for left or right cart slots)
Real Time Cartridge Sunmark, http://www.sunmark.com/

Subject: 8.3) What games support 4 or more simultaneous players?

Contributors to this section: Jeff M Lodoen, Vidar \"Hawk\" Olavesen, Pat
Mulvey, Steven E. Posey (Party Quiz), Andreas Magenheimer, Florian Dingler

a) The following games support 3 simultaneous players:
(2 players via joystick, 1 player via keyboard)

- Dynakillers by GMG/Slovakia (Freeware!)
- Blastermind by Numbercruncher/Germany (Freeware!)
- M.U.L.E. cracked+changed by CSS/Germany (pirate copy!)
- some more PD and commercial games...

b) The following games support 4-joystick head-to-head play:
(Only the 400 and 800 computer models sport 4 controller ports)

- Asteroids cart. by Atari,
- Basketball cart. by Atari,
- Dandy disk by APX,
- M.U.L.E. disk by Electronic Arts,

- Maze War disk or cart. by ???,
- Silicon Warrior disk or tape by Epyx,
- Survivor disk or cart. by Synapse,
- Major League Soccer cart. by Thorn EMI,
- Major League Hockey cart. by Thorn EMI,
- Volleyball by ???
(PD game written in Atari BASIC);
- Tank Battle by Fred Pinho from Antic magazine:
http://www.atarimagazines.com/v3n2/animate.html
- Roadblock by Brian Holness from Compute! magazine
- Battle Room (CIA vs. KGB) a PD game by SNACC
- Aliens a PD-game by ??? using an altered Dandy program
(the Dandy font and thus the graphics were changed, however,
the levels remain the same and can be used in both games);
- Sky Warrior by ??? from ROM magazine, June 1984 ***
- Depth Warrior by ??? from ROM magazine, Aug. 1984 ***
- Yellow-Brick-Road by ??? from ROM magazine, Feb. 1984 ***

*** these programs are reported to be 4-player programs, I'm
not sure if they are meant to be 4-players simultaneously
or 4-players - one after another (try to find out!);

c) The following games support 8 players on the 400/800 or 4 on the other
computer models, using the 2 controllers-per-port CX30 Paddle controllers:

- Super Breakout by Atari,
- Worms? by Electronic Arts
(has nothing to do with the PC game!)

d) The following game supports 4 players on all machines, using special
4-button keypad controllers linked together with RJ-11 jacks (standard
phone jacks) to a box with 2 joystick port connectors:

- PQ: The Party Quiz Game by Suncom

e) The following programs support multi-joystick games, using extra
hardware called Quadrotron (from the german Atari magazin 2/1989):

- test program for 4 joysticks (and assembler source);
- Quadro-Tron by H.Schoenfeld (4-player Tron-clone);

f) The following programs support multi-joystick games, using extra
hardware called Multijoy (multijoy4 for up to 4 players, multijoy8
for up to 8 players and multijoy16 for up to 16 players; originally
developed by Raster/Radek Sterba, but also available from ABBUC):

- Cervi by R.Sterba (up to 8-players Snake-clone);
- Multijoy by R.Sterba (up to 4 players Tetris-clone)
- Bremspunkt by T.Butschke (up to 4 players Car-race);
- Sheeprace by F.Dingler (1 to 8 players Sheep-race);
- Cardgrabber by F.Dingler (2 to 8 players grab-a-card-game);
- Ice-Hockey by F.Dingler (4 to 8 players Icehockey-game);
- Quadrotron-M4 by R.Sterba (patched Quadro-Tron for Multijoy);

- Shoot Em' All by R.Sterba (16 players shooting-game)

Subject: 8.4) What programs run only on the 400 and 800 models, and why?

The following are reported as incompatible with models other than the
original Atari 400/800. Most probably do work on XL/XE's if you use a
translator to run the original 400/800 OS on your XL/XE.

Apple Panic Broderbund
Aquatron Sierra On-Line
Astro Chase (by First Star Software) Parker Bros.
Atari Word Processor Atari
(this is not the same as AtariWriter!)
Atlantis (some versions!) Imagic
Attack at EP-CYG-4 (by Bram) Romox
Bacterion! Kyle Peacock/Tom Hudson/ANALOG#20
(http://www.cyberroach.com/analog/an20/bacterion.htm
patch for XL/XE available:
http://www.cyberroach.com/analog/an20/bacterion_patch.htm)
Bandits Sirius Software
BearJam Chalkboard
Boulders And Bombs CBS
Chicken Synapse
Dancing Feats (by Softsync) Romox
Demon Attack Imagic
Dreadnaught Factor, The Activision
Drelbs Synapse
File Manager 800+ Synapse
Forbidden Forest Cosmi
(later versions by different companies work ok on XL/XE!)
Fort Apocalypse Synapse
(cart version is 400/800 only! tape+disk versions work ok on XL/XE!)
Galahad And The Holy Grail APX
(Downloadable: http://www.atariarchives.org/APX/showinfo.php?cat=20132)
Go Hayden
Gorf Roklan
Jawbreaker II Sierra On-Line
Jet Boot Jack English Software
(can be found on various tapes/disks; at least the re-release
version by Byte Back works alright on XL/XE computers!)
Juggler IDSI
K-Razy Antiks K-Byte
K-razy Kritters CBS
K-razy Kritters K-Byte
Kangaroo Atari prototype
KoalaPainter Koala
Leo's 'Lectric Paintbrush Chalkboard
Leo's Links Chalkboard
Letter Perfect (before v6) LJK

LogicMaster Chalkboard

Snapper Silicon Valley Systems
Space Dungeon Atari
Squish 'Em Sirius
Super Pac-Man Atari prototype
Synassembler Synapse
Text Wizard Datasoft
Zaxxon (early release only!) Datasoft

Konrad M.Kokoszkiewicz writes:

XL/XE software won't work on 400/800 if:

1) it uses shadow RAM at $C000-$CFFF and $D800-$FFFF
2) it uses RAM expansions at $4000-$7FFF controlled by PORTB $D301
3) it uses specific XL OS functions (like JNEWDEVC)
4) it uses illegal XL OS addresses.
5) it uses European Charset :)

Andreas Magenheimer adds:

To get an overview or see a chart of OS changes from the 800 to the XL
line, refer to Antic magazine Volume 3, Number 2 (June 1984), pages 10-14;
(online: http://www.atarimagazines.com/v3n2/insideatari.html)
Also note, that some software will not work correct (or not at all) on
newer XE/XEGS versions (which have a new OS with a new version number,
a new selftest/memory-test/keyboard-test, larger RAM chips, etc. etc.);

Thomas Richter contributes further details (16 Jan 2004):

There are a couple of reasons why some games don't run on the XL/XE
models. I try to order them by "likeliness", of course biased by my

personal observations:

i) The printer buffer of the XL Operating System in page 3 is a couple of bytes shorter. The additional bytes are used for extended OS variables not available in the 800 series. Most prominent is the $3fa location, holding a shadow register of GTIA's TRIG3 signal. While a true joystick trigger line in the 400/800 series, this signal is used as "cart inserted" signal for XL/XE models. Unfortunately, the OS compares GTIA trig3 with the shadow register at $3fa in each vertical blank, running into an endless loop if the register contents don't match. This causes hangs for games using page 3 either as copy-buffer or for player-missile graphics. (Hangs by Ms. Pac-Man and Bacterion! are caused by this, and many others...) This is "fixable" either by the translator disk, or by a quick hack into the game, replacing the OS vertical blank or poking TRIG3 frequently into its shadow. The reason for the OS behaviour might be that Atari wanted to prevent crashes if the cartridge is inserted or removed while the machine is running. The 400/800 is powered down when a cart is inserted, the XL/XE lacks the cover of the older models that triggered a little switch to interrupt the power line.

ii) Similar to the above, writes to $3f8. This OS equate defines whether on a warm start, the BASIC ROM shall be mapped back in. If its contents are altered, a program triggering a reset as part of its initialization will find itself then with 8K less RAM occupied by a BASIC ROM, making it crash. Similarly, writes to the cartridge checksum $3eb could cause a cold-start on a "reset initialization". This is fixable by the translator disk.

iii) Some games use a four-joystick setup, or at least initialize PIA itself. If this happens inadequately, PIA Port B, bit 0 gets changed, disabling the ROM, and thus crashing the machine. This is not fixable by the translator since it is a hardware issue.

iv) Direct jumps into the OS ROM, not using the documented vectors in the $e450 area. Interestingly, this fault is not as common as it may sound since games hardly ever use the OS. It causes failures of some "serious applications", most notably "QS Forth" and applications compiled by it. This is fixable by the translator disk.

As a side remark, it is interesting to note that no such documented jump-ins exist for the math-pack ($d800 to $dfff). It is not really part of the OS, but looks more like a part of the BASIC interpreter that didn't make it into the OS because there was no room left. Thus, direct jump-ins have to be used here that are documented in the De Re Atari (for example). Atari never changed them, but it seems likely that this documentation happened more or less as an accident since the same source also lists some mathematics-related jump-ins into the Basic (namely, to compute SIN and COS and related) that are only valid for the Rev. A BASIC. Thus, the math pack might be a couple of routines that have been originally intended for "private use" of the BASIC ROM, but then have been found "too useful" by many others to

remain "closed". Otherwise, it is hard to explain why the otherwise
pretty cleaned-up OS comes with a construction like this.

Subject: 8.5) What programs make use of the Light Gun or a light pen?

Bertrand M. (LEXX) writes:

- Bug Hunt cart. by Atari;
- Barnyard Blaster cart. by Atari;
- Crossbow cart. by Atari;
- Crimebuster cart. by Atari;
- Operation Blood disk by ANG/Mirage;
- Operation Blood II - Special Forces disk by ANG/Mirage;
- Light Gun Blaster (PD from Page 6);
- enhanced Lightgun Blaster (PD from Pedrokko);
- Gangsterville disk by Linda Soft
(an italian game written in BASIC);
- maybe a couple more...

James Bradford mentions:
"On the 400, the light gun /pen will only work in joystick port 4."
This renders much light gun and light pen software unusable on the 400.

Andreas Magenheimer adds:
All Lightgun games can be used with a lightpen (which is not as accurate
as a Lightgun however). And all lightpen programs can be used with a
lightgun. thus add:

- Atari Graphics cart. by Atari
(a painting/drawing program);
- Matrix a PD game by Dave Oblad
(a 4-wins or 5-wins clone!)
- Alien Invaders disk by R.Gore (available from DGS);
- Bembelwo a PD game by Thorsten Butschke
(a sort of golf/minesweeper game, written in Quick);
- Sharp Shooter by Mat*Rat a PD game from Analog,
(also available on cart from Video 61/Lance Ringquist);
- Lightgun Shooter by ??? from ABBUC mag.
(a simple shooter game, at least PD!)
- Flyshot or Flyshoot a PD game by Kemal Ezcan
(a Turbo BASIC game from ZONG, the KE Soft magazine);
- Geisterschloss game+editor disk by KE Soft;
- Lightpen Doodle by ??? from Antic magazine;
- some more PD programs and utilities for Lightpen or Lightgun;

Subject: 8.6) What programs have a track ball mode or support a mouse?

Contributors: Andreas Magenheimer, Mirko Sobe

Title Keystroke Required
------------- --------------------
- Missile Command by Atari CTRL-T
- Slime by Synapse [T]
- Shanghai by Activision choose controller type: ST mouse !
(plug it into port 2; if you do not
have one, you have to reboot!!)
- Bombdown by Roemer of Uno choose between Joystick, Amiga
mouse, ST mouse or CX85 numeric
keypad (use port 2 for any mice)
- Minesweeper by Raindorf-Soft use an ST mouse in port 2
- The Brundles by KE-Soft use an ST mouse in port 2
- The Brundles Editor by KE-Soft, PD use an ST mouse in port 2
- Geisterschloss by KE-Soft, PD choose Lightgun (port 1) or ST
mouse (port 2)
- Vanish (ZONG, Vol. 5+6/1993); use an ST-mouse in port 2
- Hong Kong (ZONG, Vol. 5+6/1993); use an ST-mouse in port 2
- Maus-DOS (ZONG 5+6/1993); use an ST-mouse in port 2
- Faecher-Patience (ZONG 1/1993); use an ST-mouse in port 2
- Macao (Zong 5+6/1994); use an ST-mouse in port 2
- Multi-Mouse manager (PD) drivers for mice, TB, etc.
- Multiplayer 2.1 by Madteam supports ST + Amiga mouse in port A
- Unriagh I (german PD adventure) has drivers for ST mouse+Joystick
(stick=port 1, mouse=port2)
- Unriagh II (german PD adventure) has drivers for ST mouse+joystick
(stick=port 1, mouse=port 2)
- little Calculator (AMC-Verlag, PD) uses ST-mouse only (port 2)
- big UPN calculator (PD) uses ST mouse, TB, Touch tab. and
joystick; (there are different COM
files, rename the one you wish to
use to *.EXE; all drivers use port
1 - if I remember correctly)
- Operation Blood (ANG/Mirage) press mouse fire or Select to start
in ST mouse mode (port 2)
- Operation Blood 2 / Special Forces press mouse fire or Select to start
(ANG/Mirage) in ST mouse mode
- Sprint XL (ABBUC Jahresgabe 1992) uses an ST mouse in port 2
- M.O.S. (ABBUC magazine) uses an ST mouse in port 2
- Diamond GOS (Reeve software) all three versions support an ST
mouse in port 2
- S.A.M. (Power per Post) german GUI, supports an ST mouse in
port 2
- G.O.E. (TCS) supports an ST mouse in port 1
- BOSS-X (MS-Software, Mirko Sobe) supports ST-Mouse in Port 2

RE: Missile Command, Andreas writes:
there are many different versions available... I know the old Atari 800
cart version, which works correct with Joystick and Trakball, but not at
all with a mouse. The newer XL version works with Mouse, trackball and
Joystick, also the newest (built-in) XEGS version of MC. But, there is
also a tape version (and maybe a disk version) of MC available. I am not

sure if this tape version behaves like the old 800 version or like the newer XL and XE/XEGS versions...

And about mice, Andreas adds:
Maybe you did not know, there is a little difference between Trackball and ST-mouse. Although MC works with both input devices does not mean, they are the same. they are not !! Connect the TB to an ST computer and you see: it does not work at all !! You have to do a small conversion to convert the TB to an ST mouse. (Plans are avaiable from ABBUC, Germany).

Subject: 8.7) What programs have a paddle(s) or Koala Pad mode?

Andreas Magenheimer contributes:

- Super Breakout (Atari) breakout clone
- Live Wire (Analog) tempest clone
- Live wire 2 (Analog) tempest clone
- Planetary Defense (Analog)
- Pong (Antic) Pong clone
- Pong (Analog) Pong clone
- Super Ball (Compy Shop Magazin) Breakout clone
- Arkanoid (Taito/Imagic) Breakout clone
- Koala/Micro-Illustrator (Island graphics/Koala Ware) graphics program
- Chiseler (Antic or Analog) a breakout clone
- Slime (Synapse) a slimy shooter...
- Chicken (Synapse) catch the chicken eggs...
- One on One (Compute!) a breakout/warlords clone
- Paratroop Attack by David Plotkin
- all Pinballs created with the P.C.S.
(use left paddle trigger for left flipper and right paddle trigger for right flipper; or simply use a joystick and left/right/fire button);
- many more Pong and Breakout clones
(forgot their names, maybe someone can help here!)
- many more programs (which I do not remember right now!)

for Koala Pad only: - Micro-Illustrator / Koala Painter
- other Koala Pad painters or programs

Subject: 8.8) What programs have a CX85 Numerical Keypad mode?

Andreas Magenheimer contributes:

- Bombdown (Roemer of Uno);
- The Bookkeeper (Atari);
- Multi mouse Management (PD);
- UPN calculator (PD);
- Ball Harbour (Zong 8/1992);
- The Big Quest (Zong 7/1992);
- Blob (Zong 2/1992);

- Bomber Jack (KE-Soft);
- Catch (Zong 6/1992);
- Code table (Zong 11+12/1993);
- CX-85-Driver (Zong 7+8/1994);
- CX-85-Keycode-driver (Zong 7+8/1995);
- Donald (by KE-Soft);
- Drag (by KE-Soft);
- Dragon Fire (Zong 1/1993);
- Gravitar (Zong 4/1992);
- Hungry Goblin (Zong 5/1992);
- Invaders (Zong 5+6/1993);
- Joshi (Zong 3+4/1993);
- Lasermaze (by KE-Soft);
- Lost in the Antarctic (Zong 2/1992);
- Mampfman (Zong 8/1992);
- Minipac (Zong 3/1992);
- Minipac 2 (Zong 6/1992);
- Money Raider (Zong 2/1992);
- Monster Tracking (Zong 9/1992);
- Oblitroid (by KE-Soft)
- Pac-Man (Zong 11/1992);
- Schlumpf/Smurf (Zong 5/1992);
- Slurp (Zong 3/1992);
- Techno Ninja (by KE-Soft)
- Transsylvania (Zong 3+4/1993);
- Viro-Mania (Zong 2/1993);
- Zador XL (by KE-Soft)
- Zador II (by KE-Soft)
- many more games from KE-Soft and Powersoft;

(forgot their names, help needed!)

Subject 8.9) What programs have a Touch tablet mode?

Andreas Magenheimer writes:

- Atari Artist (Atari) graphics program
- Pixel Artist Deluxe 1.3 (PD) graphics program
- The Brundles (KE-Soft) Lemmings clone
- Musorqua (Analog computing) educational program
- many more (which I do not remember right now!)

Subject: 8.10) What kinds of RAMdisks can be set up on the Atari?

This section by Andreas Magenheimer.

8.10 Atari Ramdisks - An (incomplete) Overview:
[This is version 2.10 from October 2003]

Right from the start of the Atari 8-bit computer era in the late 70`s, Atari users wanted to have as much RAM as possible (or as their purse could afford). Having a 16k machine with a tape device was nice and cheap, but having full 48k or 64k and a floppy drive was much nicer (and very expensive). Thus many Atari users began to create selfmade RAM extensions and enhancements, just to save some money. Also a lot of firms provided extra RAM, RAM enhancements, RAM extensions and Ramdisks. Besides Atari there were (and still are) quite a lot of producers, manufacturers, distributors and authors of such RAM enhancements...

This "short" and incomplete overview does not provide any docs or manuals, but gives some info about the various Ramdisks on the market. Since these notes are written by me, they will merely contain the information I have. And as you all can see - it is still incomplete. So any help and extra info, as well as corrections, are very welcome. It would be nice to see this text & info growing. For now let us start here, the info-section is divided into 8 groups:

1) Name (Name of the RD, e.g. Megaram 2 or Rambo XL or MIO, etc.);
2) Vendor/Author (or distributor, manufacturer, producer, etc.);
3) Size (size of the Ramdisk only; NOT the full computer memory);
4) [Bankswitching] Area (for XL/XE computers usually 4000-7FFF);
5) Banks (hexadecimal input count, as in MyDOS or RAMDTEST.BIN);
6) Control Bits (which bits are used to control the Rambanks);
7) Port (control Port - usually Port B for XL/XE machines);
8) Notes (any extra info, comments, miscelleanous things, etc.);

If you wish to add any other type of info, let me know. The above information should be enough for most programmers to support a RD in their programs (especially to support more than just one type of RD). Hopefully future programs will take care about this info or just use a small setup program to setup any kind of RD. Now let me begin:

A) Atari 400/800 Ramdisks:

Name Vendor Size Area
Banks Bits Port Notes

- Axlon Axlon/Atari 64k 4000-7FFF
0 thru 3 0,1 (CFFF) plug-in-board
Note: total memory = 96kbytes (32k RAM + 64k RD);

- Axlon Axlon/Atari 128k 4000-7FFF
0 thru 7 0,1,2 (CFFF) plug-in-board
Note: total memory = 160kbytes (32k RAM + 128k RD);

- 288k800 D.Byrd and others 256k 4000-7FFF
0 thru 15 0,1,2,3 (CFFF) selfmade-board
Note: total memory = 288kbytes, Axlon compatible;

- 544k800 various authors 512k 4000-7FFF
0 thru 31 0,1,2,3,4 (CFFF) selfmade-board

Note: total memory = 544kbytes, Axlon compatible;

- 1056k800 various authors 1024k 4000-7FFF
0 thru 63 0,1,2,3,4,5 (CFFF) selfmade-board
Note: total memory = 1056kbytes, Axlon compatible;

- 2080k800 various authors 2048k 4000-7FFF
0 thru 127 0,1,2,3,4,5,6 (CFFF) selfmade-board
Note: total memory = 2080kbytes, Axlon compatible;

- 4128k800 various authors 4096k 4000-7FFF
0 thru 255 0,1,2,3,4,5,6,7 (CFFF) selfmade-board
Note: total memory = 4128kbytes, Axlon compatible;

=> Note that all so-called Axlon "compatible" (256k-4096k) Ramdisks
normally do not homebank when RESET is pressed (a fix should be
available somewhere), whereas original Axlon Ramdisks do homebank
properly !! (Special thanks to Lee Barnes for this note !!)

- Mosaic RAMpower by Mosaic Electronics is actually a Ramboard, that
enhances the memory of your Atari 800; avaiable in 3 sizes: 16k,
32k and 64k (where max. 52k can be utilized from 64k). Looks like
these are no Ramdisks, just (normal/main) RAM enhancements. But maybe
the 64k Ramboard can be patched in some way to gain a small 16k or
32k Ramdisk (48k RAM + 16k RD or 32k RAM + 32k RD) ?!?

- ...

B) Atari XL/XE Ramdisks:

Name Vendor Size
Area Bits Port
Banks
Notes

=> Note that bit 4 is always used in all Port B type memory upgrades to
turn on the CPU's access to the extended memory. Thus, it is not reported
in bit use tables as a used bit as it does not control which bank gets
switched into the 4000-7FFF region. This seems to be a standard convention
as the majority of ramdisk users don't want bit 4 counted as a control bit.
And it's not a control bit - its the 'on' bit. Likewise, bit 5 is the 'on'
bit for ANTIC's access to the extended memory for 'compatible' (to 130XE)
machines as well. If bit 5 does show up in a bit use table, one can only
assume that this is an incompatible machine which doesn't have or use ANTIC
access at all. In that special case, bit 5 is then available for use in
switching in the various banks and thus gets counted as a control bit in
bit use tables. (Special thanks to Lee Barnes for this note !!)

- 130XE-Ramdisk Atari 64k
4000-7FFF 2,3 B ($D301)
Banks: E3,E7,EB,EF;
Notes: old=8kbyte chips (west), new=32kbyte chips (east);

XE`s made in China have faulty GTIAs => replace them!;
XE`s and XEGS made in China also have a new OS which causes
some incompatibility problems (try: Encounter / disk version
by Novagen or try: Muad`Dib-Demo by Hurek, etc.); just replace
the new OS with an older XL/XE one if you want less trouble!;
standard Atari RD - available with all XE-compatible ramdisks;
Antic access: YES! Atari Basic: YES! XL/XE Selftest: YES!;

- 192k-600XL Compyshop 128k
4000-7FFF 2,3,? B ($D301)
Banks: e3,e7,eb,ef,a3,a7,ab,af;
Notes: early CS upgrade version for 600XL only!;
afaik this was a piggy-back version...;
Antic access: no! Atari Basic: YES! XL/XE Selftest: YES!;

- 320k-800XL Compyshop 256k

2F 2E 2D 2C 2B 2A 29 28 27 26 25 24 23 22 21 20
Notes: uses a PC-SIMM (30-Pin-SIMM), pin-switching in RD: 4,5;
XL/XE/XEGS: Selftest+Basic=YES, XEGS: Missile Command=YES!;
no use of any switches!; Antic access: YES!; (CS-compatible!);

- Megaram 1 Klaus Peters 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
Notes: used 16kbyte Chips x16 (very big/huge pcb);
originally designed (and maybe produced?) by Ralf David;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 2 Klaus Peters 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
Notes: uses 128kbyte Chips x2 (much smaller pcb);
originally designed (and maybe produced?) by Ralf David;
newer MegaRAM version; fully compatible to Megaram 1;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 1,2 => 512k B.Pahl 512k
4000-7FFF 2,3,5,6,7 B ($D301)
Banks: 03,07,0B,0F,23,27,2B,2F,43,47,4B,4F,63,67,6B,6F,
83,87,8B,8F,A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: upgrade for Megaram 1 or 2 to 512kbytes (which means
a total of 576kbytes memory); requires a small pcb (in
connection with the existing Megaram 1 or 2 pcb) and the
following chips: 2x 414256 (RAM), 1x 74LS138 plus some more
wires inside the computer; additionally one may install a
switch to switch down to 320k or even 64k (no RD!) if needed;
advantage: more RAM, Basic still there, 26AE & 8ACE banks...;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 3 Klaus Peters 256k
4000-7FFF 2,3,6,7 B ($D301)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
Notes: uses 256kx4 Chips (514256-70); fully compatible to
K.P./R.D. Megaram 1+2; originally designed by Ralf David;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

- Megaram 3 Klaus Peters 1024k
4000-7FFF 2,3,6,7 B ($D301)
0,1 (or switches) B ($D600)
Banks: 23,27,2B,2F,63,67,6B,6F,A3,A7,AB,AF,E3,E7,EB,EF;
$D600: F3,F7,FB,FF...
Notes: uses 1Mx4 Chips (514400-70); can be a) 1 Ramdisk of 1 Mb
or b) 2 Ramdisks of 512kb each or c) 4 Ramdisks of 256kb each;
uses four switches; the 1MB mode seems to be very incompatible!!;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

=> Note that all XL-type Megaram-Ramdisks (Megaram 1, 2, 3)
have Refresh bugs/problems which can be solved quite easily
with one 74LS08 chip (see ABBUC magazine 63, pages 19+20);
None of the Megaram Ramdisks do have the separate Antic access
built-in, but XE-types can be upgraded easily for this mode!!;

- Newell Newell Ind. 192k
4000-7FFF 2,3,5,6 B ($D301)
Banks: a) older version: 83,87,8B,8F,C3,C7,CB,CF,E3,E7,EB,EF;
b) newer version: A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: replaces the 8 RAM 4164 with 8 RAM 41256 and thus uses
64k as main RAM and 192k as Ramdisk/extra RAM (therefore some
RD-testers will see 240k memory or 15 RD-banks which is untrue!);
the older 256k Newell version was not compatible to Rambo XL,
Buchholz and Peterson, since these were not available then;
Newell was earlier on the market than Rambo and Peterson,
while early Buchholz Ramdisks used 32k banks instead of 16k
banks; all this changed with the appearance of the 130XE
and thus Buchholz designed 16k Rambanks and finally Newell
256k Ramdisks became Buchholz/RamboXL/Peterson compatible !!
Atari Basic: YES! XL/XE Selftest: YES! Antic access: YES!

- Newell Newell Ind. 1024k
4000-7FFF 1,2,3,5,6,7 B ($D301)
Banks: 01,03,05,07,09,0B,0D,0F,21,23,25,27,29,2B,2D,2F
41,43,45,47,49,4B,4D,4F,61,63,65,67,69,6B,6D,6F
81,83,85,87,89,8B,8D,8F,A1,A3,A5,A7,A9,AB,AD,AF
C1,C3,C5,C7,C9,CB,CD,CF,E1,E3,E5,E7,E9,EB,ED,EF
Notes: uses 8 pc. 1Mx1 Chips (511000-80); Basic: To be able to
select the internal Basic, connect a toggle switch between ground
and the motherboard where PB1 was removed (PIA `Hole' 11). The
switch is not much different than the Option Key, and I found it
more versatile. (Wes Newell) => see also ABBUC mag. 29, page 6+7;
Atari Basic: yes/no! XL/XE Selftest: YES! Antic access: YES!

=> Note that so-called "Newell-compatible" Ramdisks (clones or
selfmade ones...) most likely do NOT have Antic access, due to
the lazyness of its creators or their intentions of simply not
needing it. However, original Newell Ramdisks created and sold
by Wes Newell do have the separate Antic access !!

- Newell Newell Ind. 4096k
4000-7FFF 0,1,2,3,4,5,6,7 B ($D301)

E0,E1,E2,E3,E4,E5,E6,E7,E8,E9,EA,EB,EC,ED,EE,EF
F0,F1,F2,F3,F4,F5,F6,F7,F8,F9,FA,FB,FC,FD,FE,FF
Notes: uses 8 pc. 4Mx1 Chips (541000-80); made by Newell, later by
FTE; seems to be very incompatible to existing software and
bankswitching cartridges (OSS, Atari, etc.), because normal RAM at
4000-7FFF is NOT available - only extra Ram/Ramdisk banks. With one
PIA chip there is simply no bit left to switch between main RAM and
extra RAM / Ramdisk. But with the installation of a second PIA chip
one would be able to do so. Furthermore one may use (almost) any
setup or banks he likes then (with a second PIA chip one could
control up to 256 Megabytes of RAM). Basic: To be able to select the
internal Basic, connect a toggle switch between ground and the
motherboard where PB1 was removed (PIA `Hole' 11). The switch is not
much different than the Option Key, and I found it more versatile.
(Wes Newell); OS: It is possible to maintain OS bankink using 4 Megs.
It requires moving the OS into RAM before any banking of that Bit
occurs. Use MOVEOS File on the [Newell-Software-] Disk. (Wes Newell)
Atari Basic: no! XL/XE Selftest: no (?) Antic access: no!

- Peterson 256k S.Peterson 192k
4000-7FFF 2,3,5,6 B ($D301)
Banks: A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: compatible to Buchholz, Rambo XL and newer Newell versions;
replaces the 8 RAM 4164 with 8 RAM 41256 and thus uses 64k as main RAM
and 192k as Ramdisk (most RD-testers will therefore see 240k memory);
Antic access: no!, Atari Basic: YES!, XL/XE Selftest: YES!

- Peterson 320k S.Peterson 256k
4000-7FFF 2,3,5,6 B ($D301)
Banks: 83,87,8B,8F,A3,A7,AB,AF,C3,C7,CB,CF,E3,E7,EB,EF;
Notes: compatible to TOMS (?), incompatible to Compyshop!;
there are still the 64k main RAM plus this 256k extra RAM;
Atari Basic: YES! XL/XE Selftest: YES! Antic access: no!

C) Parallel-Bus-Devices:
(600XL/800XL = parallel bus, XE = cart-port + ECI and/or adapter)

- Turbo Freezer XL Bernhard Engl 256k
4000-7FFF 2,3,4,5,6 B ($D301)
Banks: E3,E7,EB,EF,93,97,9B,9F,A3,A7,AB,AF,B3,B7,BB,BF;
Notes: The Turbo Freezer XL is an external device for the XL-PBI
with its own Operating-Sytem. It has a built-in Freezer, Monitor
and DOS. The Antic access for the RD can simply be built with one
wire from CPU to PBI. The RD Access works with Port-Bits 2,3 for
Bank Switching, Bits 4,5 for Groups and Bit 6 for "Mode-Select".
PortB D7 = Selftest (0=on)
D6 = Mode (1 = XE, 0 = Groups)
D5 = XE: ANTIC-Access (0 = on), Groups: Group H
D4 = XE: CPU-Access (0 = on), Groups: Group L
D3 = Bank Number H
D2 = Bank Number L
D1 = BASIC ROM (0 = on)

D0 = OS ROM (0 = off)
Atari Basic: YES! XL/XE Selftest: YES! Antic access: optional;

- missing info for the following Ramdisks:
other Bob Woolley Ramdisks, more 600XL Ramdisks, Rambo XL (512k by
ICD), some Irata Ramdisks, MIO, as well as many other types;
- (?) means: info is missing or I am not absolutely sure about this
information; so this has to be verified by other Atarians;

For this 20th edition special thanks and credits go to: Lee Barnes,
Russ Gilbert, Mathy van Nisselroy, Erhard Puetz, Mathias Reichl,
Ron Hamilton, Wes Newell, Guy Ferrante, XI of Satantronic, Bernhard
Pahl and Walter Lojek for sharing their info with me. Also thanks to
John Picken for writing an excellent article about ramdisks and
cartridges (especially about bank-switching, which both devices can
do). And thanks to Jindrich Kubec (Jindroush) for presenting this fine
article on his homepage... Finally thanks to Michael Current for
publishing/including this "spam" in his A8FAQ and all the nice Atarians
at comp.sys.atari.8bit for their help and patience. -Thank you Folks !!-
Well, thats it for today - there is still a lot of information missing,
I know, but any help is appreciated. If you have some more information
or other things that might help, let me know. Please do also send
corrections since there will always be some updates and corrections
nescessary. Atarian Greetings - Andreas Magenheimer.

Subject: 8.11) What programs support a RAMdisk?

This section by Andreas Magenheimer.

8.11 Ramdisk-supporting Software:
(This is Version 2.10 from October 2003)

Well, I will only list those programs here that have BUILT-IN! ramdisk
support. Why? Simply, because most if not all PD programs can support
a RD, as soon as the user a) has a certain DOS or RD driver or b) has
a special OS inside the computer or c) has any kind of special and
non-standard hardware. Just one example: With the use of QMEG+ OS it
is possible to freeze ZORK (or any other protected / unprotected program)
into the RD, then re-direct the RD as being drive 1 and finally boot
Zork off of the Ramdisk, allthough Zork does not support a RD in any way.
The same funny things can be done to other copy protected programs and
especially to unprotected public domain programs... Now, let me begin:

A) DOS programs:

a) Name(s) b) Author(s)
c) RD-type(s) d) max. size

- Atari DOS 2.0 (Atari Corp.) OSS/Atari;
a) Axlon-RDs (selfmade drivers!) 128k;
b) XE-RDs (selfmade drivers!) 130XE (=64k);
(there are some more selfmade RD-drivers available!)

- Atari DOS 2.5 (Atari Corp.) OSS/Atari;
a) 130XE-RD (standard driver!) 64 kbytes;
b) XE-RDs (selfmade drivers!) max. 2x128 kbytes;
c) Axlon-RDs (selfmade drivers!) 128 kbytes;
(there are very many selfmade RD-drivers available!)

- DOS 3.0 (Atari Corp.) ???/Atari;
=> there should be some selfmade drivers for 130XE Ramdisks (and
maybe Axlon), but I have not yet seen any (nor used DOS 3);

- DOS 4.0 (Atari/Antic) Michael Barall;
=> there should be some selfmade drivers for 130XE Ramdisks (and
maybe Axlon), but I have not yet seen them (nor used DOS 4);

- Bewe-DOS Bewesoft/J.Bernasek;
a) XE-RDs (standard driver!) up to 1024 kbytes;
b) Rambox (standard driver!) up to 256 kbytes;
(Bewe-DOS is compatible to Sparta-DOS but does not use the RAM
under the OS ROM! many tools can be used under both DOS versions);

- Bibo DOS Compyshop/E.Reuss;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) other RDs (selfmade drivers!) up to 256 kbytes;

- DOS II+D Version 6.x Stefan Dorndorf;
a) XE-RDs (standard driver!) max. 2x128 kbytes;
b) Rambox (selfmade drivers!) up to 256 kbytes;

- DOS-XE (Atari Corp.) ???/Atari;
a) 130XE-RD (standard driver!) 64 kbytes;
b) other RDs (really?!?) unknown;
=> has the same author as the unpopular (Atari) DOS 3.0 !!;
(in the Atari scene it is as unpopular as DOS 3 and DOS 4!);

- DOS-XF (Atari Germany) Reitershan Comp.
=> similar in function to Turbo-DOS 2.1XF (but with a nice
DOS 2.0 / 2.5 DUP-menu!) => see Turbo-DOS !!

- My-DOS 4.5x Wordmark/R.Puff+C.Marslett
a) XE-RDs (standard driver!) up to 1024 kbytes;
b) Axlon-RDs (standard driver!) up to ??? kbytes;
c) other RDs (MIO, BB, etc.) up to 1024 kbytes?;

- Smart-DOS Version 6.1 Ron Bieber;
a) XE-RDs (selfmade drivers!) up to 64 kbytes;
b) Axlon-RDs (selfmade-driver!) up to 128 kbytes;

- Sparta-DOS 1.x (400/800) ICD;
a) Axlon-RDs (??? drivers) up to 128 kbytes;
b) other RDs (??? drivers) up to ??? kbytes;

- Sparta DOS 2.x, 3.x (XL/XE) ICD / FTE;
a) XE-RDs (standard drivers!) up to 1024 kbytes?;
b) others (MIO, BB, etc.) up to 1024 kbytes?;
(maybe also RD-drivers for up to 16 Megabytes ?!?)

- Sparta DOS 3.3x (XL/XE) Stephen J. Carden;
=> see Sparta DOS 2.x and 3.x !!
(especially made for use with BBS-Express-Pro!)

- Sparta DOS X / 4.x (XL/XE cart.) John Harris/FTE;
=> see Sparta DOS 2.x and 3.x !!
(maybe with RD-driver for up to 16 Megabytes ?!?)

- Super DOS 2.x Paul Nichols;
a) XE-RDs (standard driver!) up to 128 kbytes;
b) Axlon-RDs (standard driver!) up to 128 kbytes;

- Super DOS 5.x Paul Nichols;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) Axlon-RDs (standard driver!) up to 128 kbytes;

- Top-DOS 1.x R.K. Bennett
a) Axlon-RDs (standard driver!) up to 128 kbytes;
b) 130XE-RD (standard driver!) 64 kbytes;
c) other RDs (Mosaic?! driver!) up to ??? kbytes;

- Turbo-DOS 1.x, 2.x Reitershan Comp.;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) other RDs (MIO, Irata, etc.) up to 256 kbytes;

- X-DOS 2.x Stefan Dorndorf;
a) XE-RDs (standard driver!) up to 256 kbytes;
b) other RDs (selfmade drivers!) up to 256 kbytes;

B) Non-DOS programs:

a) Name(s) b) Author(s)
c) supported memory d) RD-type(s)

- A-Base 130XE (TOOL) ??? (author unknown);
64k, 128k 130XE-Ramdisk;

- ABBUC-Magazine-Intro 52 (DEMO) Karolij N./Heaven
64k, 128k 130XE-Ramdisk
(has different intros on 64k / 128k machines!)

- ABBUC-Magazine-Intro 55 (DEMO) Karolij N./Heaven
64k, 128k 130XE-Ramdisk
(with different intros on 64k / 128k machines!)

- Adalmar (GAME) F.Buettner (PPP);
64k, 128k 130XE-Ramdisk;

- Alphasys-Sample-Software (TOOLs) (Mirage+ANG);
a) 64k, 128k 130XE-Ramdisk;
b) 320k 26AE = YES!, 8ACE = ???;
(there are several programs for 64k or 128k memory; there
is also one -and only one- program for 320k Ataris)

- Anime 4ever (DEMO) Sente-Software-Group;
64k, 320k 26AE ???, 8ACE ??? ;
(on 64k Ataris all pics load from disk, on 320k Ataris from Ramdisk)

- A.R.-The Dungeon (GAME) P.Price/Datasoft;
48k, 64k, 128k 130XE-RD;

- A-Text (TOOL) ??? (author unknown);
64k, 128k 130XE-RD;

- Atari-Writer-80 (TOOL) (Atari);
48k, 64k, 128k 130XE-RD;

- Atari-Writer-Plus (TOOL) (Atari);
48k?, 64k?, 128k 130XE-RD;

- Basic-XE (TOOL) OSS/ICD/FTE
64k, 128k 130XE-RD;

- Bop N'Wrestle (GAME) (Mindscape)
64k, 128k 130XE-RD
(on 64k Ataris the floppy will never stand still!)

- [The] Brundles (GAME) A.R.+C.S.S. (KE-Soft);
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;
(merely copies the levels into the RD and loads them from there;
if you don't want to play all 100 levels at once, 64k is enough!)

- Datei 4.x (database TOOL) Norbert Schlia;
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;

- Desktop Atari (TOOL) H.B.S.F
64k, 128k RAM 130XE-RD;
(the Key "7" in the Main Menu copies the whole program into the RD)

- Diskcomm. 2.x, 3.x (TOOL) Robert "Bob" Puff;
a) extra RAM (answer with Yes) detects up to 10 banks (hex.)?;
b) Ramdisk (answer with No) all DOS 2, My-DOS and Sparta RDs;
(Ramdisk size depends on the DOS and RD driver you are using, i.e.
with TurboDOS up to 256k, with MyDOS or Sparta maybe up to 1 Megabyte)

- Diskworker 130XE (Tools) PETSOFT
64k, 128k RAM 130XE-RD;

- Extended-Atari-Basic (TOOL) ??? (author unknown);
64k, 128k (RAM under OS-ROM!) 130XE-RD;

- Extended-Turbo-Basic (TOOL) ??? (author unknown);
64k, 128k (RAM under OS-ROM!) 130XE-RD;

- Fampy 2.3 (Bootdisk; TOOL) Friday-Soft/W.Freitag;
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;

- Fampy 6.1i+ (ML-File; TOOL) Friday-Soft/W.Freitag;
64k, 128k, 192k, 320k 130XE-RD, AE & 26AE Ramdisks;

- Grafik+Sound Demo (DEMO) Dendrit-Soft/P.Sabath;
(48k?) 64k, 128k 130XE-Ramdisk;

- Howfen-DOS 3.x, 4.x (TOOL) ??? (author unknown);
48k, 64k, 128k and more 130XE-RD and more;

- Howfen-Tape-to-Disk (TOOL) ??? (author unknown);
48k, 64k, 128k and more 130XE-RD and more;

- Human Torch & The Thing Questprobe (SAGA+Marvel);
48k/64k, 128k RAM 130XE-Ramdisk
(The main program or some pics will be copied to the Ramdisk)

- Inertia 2.9 (TOOL) Mad Team;
a) 64k RAM (16k only) 16k usable memory (1 bank);
b) 128k RAM (16k+64k) 130XE-Ramdisk; (5 banks);
c) 320k RAM (16k+256k) 26AE & 8ACE RDs (17 banks);

- I.K. Plus Demo (GameDEMO) ??? (authors unknown)
a) 64k RAM only graphics;
b) 128k RAM graphics + sound;

- Megablast 1 (GAME) Thorsten Karwoth;
64k, 128k 130XE-Ramdisk;

- Midi-Mate II (Tool) Hybrid Arts;
64k, 128k 130XE-Ramdisk;

- Midi-Pattern-Editor (TOOL) Raster/Radek Sterba;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE-RDs?;

- Midi-Player (TOOL) Ireneusz Kuczek;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE RDs?;

- Midi-Recorder (TOOL) Ireneusz Kuczek;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE RDs?;

- Midi-Sequencer (TOOL) Maciej Sygit;
64k, 128k, 320k 130XE-RD, 26AE & 8ACE RDs?;

- MSC-IDE interface software (TOOLs) M.Belitz+S.Birrmanns;
64k, 128k 130XE-Ramdisk
(some programs/drivers use the Ramdisk, if no Ramdisk is
available, they will use & erase the RAM area 4000-7FFF)

- [The] Muppet-Movie (DEMO) Mad Team;
64k, 128k 130XE-Ramdisk;
(on 128k Ataris some pics are loaded from the Ramdisk)

- [The] Page Designer (TOOL) XLent
64k, 128k 130XE-Ramdisk;

- Paperclip II (TOOL) Batteries Included;
48k?, 64k, 128k 130XE-Ramdisk;

- Questprobe featuring Spiderman - see: Spiderman;
(afaik, THE HULK does not support 128k RAM);
- Questprobe featuring Human Torch and Thing - see Human Torch;

- Spiderman Questprobe (SAGA+Marvel);
48k/64k, 128k RAM 130XE-Ramdisk;
(The main program or some pics will be copied to the Ramdisk)

- Sweet Fantasy (DEMO) Tight;
64k, 128k 130XE-Ramdisk;
(on 128k machines the gr.9 pics are loaded from the ramdisk,
on 64k Ataris the gr.9 pics are loading from the disk drive);

- Syncalc "+" (TOOL) Synapse;
48k, 64k, 128k RAM and more Axlon-Ramdisks;

- Synfile "+" (TOOL) Synapse;
48k, 64k, 128k RAM and more Axlon-Ramdisks;

- Synhome "+" (TOOL) Synapse;
48k, 64k, 128k RAM and more Axlon-Ramdisks;

(other programs by Synapse should also support Axlon-Ramdisks)

- Textpro 5.x (TOOL) Ronnie Riche;
48k, 64k, 128k and more 130XE-RD, 26AE & 8ACE RDs;
(here the RD-bank Macros *.ADN and/or *.BNK will require extra RAM
/ Ramdisk; simply don`t use them if you merely have 48k or 64k !!)

- The Browser (TOOL) CTH / Tom Hunt;
64k, 128k and more all Sparta-DOS Ramdisks;

- The Top-3 Demo (DEMO) W.F.M.H.;
64k, 128k 130XE-Ramdisk;
(the dancing girl -"Veronika"- supports 64k and 128k memory!)

- Typesetter XL/XE (TOOL) XLent;
64k, 128k 130XE-Ramdisk;

- [The] X-Files Shpoon;
64k, 128k, 320k 130XE-RD, 26AE or 8ACE RDs?;

- thats all I remember right now...

Note: - Axlon means any Axlon compatible Ramdisk;
- 130XE means 128k memory (64k RAM + 64k RD);
- AE means 192k memory (64k RAM + 128k RD);
- 26AE means 320k memory (64k RAM + 256k RD)
=> Compyshop types (and compatibles, like Mathy`s RD);
- ACE means 256k memory (64k RAM + 192k RD)

=> Newell, Buchholz, Peterson, Rambo XL (and compatibles);
- 8ACE means 320k memory (64k RAM + 256k RD)
=> Newell?, TOMS, Peterson, Rambo XL? (and compatibles);
- ? means I am (generally) unsure -or:- I am not sure if
the given information is correct (just check it out!);

Thats all for now. Thanks and credits go to Russ Gilbert, Lee Barnes
Bernhard Pahl and Mathy van Nisselroy for sharing some info with me.
Any further help or info is welcome !! -Andreas Magenheimer.

Subject: 8.12) What programs require a RAMdisk?

This section by Andreas Magenheimer.

8.12 Atari-programs that require Extra-RAM / Ramdisk:
[This is version 2.10 from October 2003]

A) Non-Demo-Programs:

a) name(s): b) author(s):
c) memory (min.): d) RD-Type(s):
e) notes

- 130XE-(Bank-)Tester (TOOL) various authors (PD);
128k memory (64k RAM + 64k RD) 130XE-Ramdisk (E3,E7,EB,EF);
(1 block with 4 banks, overall: 4 banks);

- 192k-Memory-Tester (TOOL) various authors (PD);
192k memory (64k RAM + 128k RD) A,E Ramdisk blocks;
(2 blocks each with 4 banks, overall: 8 banks);

- 256k-Memory-Tester (TOOL) various authors (PD);
256k memory (64k RAM + 192k RD) A,C,E or 8,A,E blocks;
(3 blocks each with 4 banks, overall: 12 banks);

- 320k-Memory-Tester (TOOL) various authors (PD);
320k memory (64k RAM + 256k RD) 8,A,C,E or 2,6,A,E blocks;
(4 blocks each with 4 banks, overall: 16 banks);

- 576k-Memory-Tester (TOOL) various authors (PD);
576k memory (64k RAM + 512k RD) (overall: 32 banks);
(8 blocks x 4 banks -or- 4 blocks x 8 banks);

- 1088k-Memory-Tester (TOOL) various authors (PD);
1088k memory (64k RAM + 1024k RD) (overall: 64 banks);
(4 blocks x 16 banks for Mathy van Nisselroy`s RD and maybe others);
(8 blocks x 8 banks for Newell, Peterson, TOMS and compatibles);
(16 blocks x 4 banks should also be possible, but do not exist yet!);

- 2112k-Memory Tester (TOOL) Satantronic`s XRAM 0.18;
2112k memory (64k RAM + 2048k RD) (overall: 128 banks);
(8 blocks x 16 banks -or- 16 blocks x 8 banks);

- 4160k-Memory-Tester (TOOL) ??? (authors unknown);
4160k memory (64k RAM + 4096k RD) (overall: 256 banks);
(16 blocks x 16 banks, means blocks 0-F each with banks 0-F);
(note: with 1 PIA chip the main RAM 4000-7FFF is not available!);

- 8256k-Memory-Tester (TOOL) ??? (authors unknown);
8256k memory (64k RAM + 8192k RD) (overall: 512 banks);
(afaik, this upgrade requires 2 PIA chips or some uncool tricks!);

- 16448k-Memory-Tester (TOOL) ??? (authors unknown);
16448k memory (64k RAM + 16384k RD) (overall: 1024 banks);
(afaik, this upgrade requires 2 PIA chips or some uncool tricks!);

=> Note that 2MB-16MB extra RAM / Ramdisks are very uncommon
in the Atari scene! These upgrades were once sold by ICD and
Newell (maybe a few ones also by FTE) and of course they were
and still are selfmade by some crazy Atarians. It is not clear
if there is any software (games, apps., demos) available, that
supports these mega-upgrades fully. Afaik, only few Atarians
have and use them, mostly users of mailboxes / BBS`es...;

- APC-Archiver 1.0 (TOOL) LBS/APC;
320kbytes minimum memory 26AE = no!, 8ACE = YES!;
(It seems like this program does not work on Ataris which have
more than 320kbytes of RAM, i.e. it crashes on my 576k Atari)

- APC-Packer 1.1 (TOOL) LBS/APC;
320kbytes minimum memory 26AE = no!, 8ACE = YES!;
(It seems like this program does not work on Ataris which have
more than 320kbytes of RAM, i.e. it crashes on my 576k Atari)

- Atari Writer Plus Super Menu Ken Siders;
a) AWP + Super Menu 128k RAM 130XE-Ramdisk;
b) AWP-XE + Super Menu 256k RAM 26AE = ???, 8ACE = ???;

- ATOS/ATari Operating System (TOOL) CTH / Tom Hunt;
64k RAM + 16MB-HDD-Partition all Sparta-DOS Ramdisks;
(the standard system is configured for a 16MB harddisk partition,
however it is possible to change this and use an Atari with a big
floppy drive and/or ramdisk; but this requires quite some work!)

- Audio/Studio Master ANG/Mirage;
minimum 320k RAM 26AE = YES!, 8ACE = ???;
(the program is a part of the 4Bit A/D converter software!)

- Boot-Majster (TOOL) Electron;
128k RAM 130XE-Ramdisk;

- Boss-X - Version 10.x (TOOL) MS-Soft / Mirko Sobe;
128k RAM and more all DOS 2 und MyDOS RD`s;

- Boss-XE - Version 8.x (TOOL) MS-Soft / Mirko Sobe;
128k RAM and more all DOS 2 und MyDOS RD`s;

- CAD-XE (TOOL) (HAPS-PD 0350);
128k RAM 130XE-Ramdisk;

- Castle of Blackthorne (GAME) L.o.D. / Thimo Graef;
128k RAM 130XE-Ramdisk;

- Cavepack (Game) KE-Soft / Kemal Ezcan;
XE-Version = 128k RAM 130XE-Ramdisk;

- Computer Baseball (GAME) Douglas Blackwell
128k RAM 130XE-Ramdisk

- Degas-View-XE (Tool) Mat*Rat / Mathew Ratcliff;
128k RAM 130XE-Ramdisk;

- Diskettenverwaltung 130XE (TOOL) (ABBUC PD 86);
(database 130XE) 128k RAM 130XE-Ramdisk;

- Draw XE (TOOL) (ABBUC PD 387);
128k RAM 130XE-Ramdisk;

- Dream Vision (TOOL) (ABBUC PD 480);
(IFF-Viewer) 256k RAM 26AE = YES!! ; 8ACE = ??? ;

- Filemanager/Filecopiers (TOOLS) various authors (PD);
128k=> 1 floppy is enough Sparta and DOS 2.x RD`s;

- Fraktale & Colorprint (TOOLS) (ABBUC PD 349); P.Woetzel;
(fractals & colorprint) 128k RAM 130XE-Ramdisk;

- Gizmo`s Castle (GAME) Black Panther / M. Kugler
XE-Version = 128k RAM 130XE-Ramdisk;

- Grafik-Zeilen-Editor (TOOL) (HAPS PD 0296);
(graphic-line-editor) 128k RAM 130XE-Ramdisk;

- Hi-Res Designer (TOOL) (HAPS PD 0015);
(gr.8 drawing program) 128k RAM 130XE-Ramdisk;

- Hires-Dump (TOOL) (ABBUC PD 113);
(gr.8 print-program) 128k RAM 130XE-Ramdisk;

- Inertia 4.5 (MODplayer TOOL) MadTeam
a) 128k RAM 130XE-Ramdisk
b) more than 128k RAM 26AE = YES!, 8ACE = YES!;

- Kaiser II (GAME) Phoenix Softcrew / C.Strotmann;
a) 64k RAM Version any 64k XL/XE computer;
b) 128k RAM Version 130XE-Ramdisk;
c) 320k RAM Version 26AE = YES!, 8ACE = YES!;
(this game comes in 3 separate versions; plays good on 64k
computers, but needs less disk-swaps on bigger machines !!)

- Kassettencopy (TOOL) (ABBUC PD 466); J.Gernreich;
(Cass.copy) Copy64 = 128k RAM 130XE-Ramdisk;

- Kemna-Video (TOOL) (ABBUC PD 185);
(intro-creator) 128k RAM 130XE-Ramdisk;

- Koala Slideshow XE (TOOL) Charles Johnson/Analog
128k RAM 130XE-Ramdisk

- Koenigsdiamanten (Game) KE-Soft / Kemal Ezcan;
XE-Version = 128k RAM 130XE-Ramdisk;

- Lightraces (Game) (Power per Post);
XE-Version = 128k RAM 130XE-Ramdisk;

- Macro-Assembler-XE 4.32 (TOOL) (ABBUC PD 297); T.Karwoth;
(older version!) 128k RAM 130XE-Ramdisk;

- Macro-Assembler-XE+ 2.x (TOOL) (ABBUC PD 368); T.Karwoth;
(newer version!) a) 128k RAM 130XE-Ramdisk (MyDOS only!);
b) 128k - 1088k (MyDOS only!) 26AE = YES!! ; 8ACE = YES!! ;
(has a rambank-finder program that can be loaded from Basic or the
menu!; the assembler does not work on a CS ramdisk with refresh bugs!)

- Masher-XE V1.0 ??? (author unknown);
minimum 128k RAM 130XE-Ramdisk;
192k, 256k and max. 320k RAM AE, ACE and max. 8ACE RDs;

- Memdrv10 (RAM-Tester TOOL) Andre 'MacFalkner' Bertram
$D301 all Portbits 16k up to 4 MB (all standard RD`s);
$D600 up to ??? MB (Klaus Peters Megaram 3 Ramdisk)
includes 16k Bankswitching and exotic 32k (Buchholz) Bankswitching

- Menu 130 (TOOL) Les Howarth/Page 6
128k RAM 130XE-Ramdisk

- Midi Mate III Hybrid Arts;
128k RAM 130XE-Ramdisk;

- Minesweeper 1-4 (GAMEs) J.R.Chiko/S.A.S.;
128k RAM (4 game versions) 130XE-Ramdisk

- Mister X (Game) (Power per Post);
128k RAM 130XE-Ramdisk;

- Monitors, Debuggers & more (TOOLS) (HAPS PD 0109);
some programs require 128k RAM 130XE-Ramdisk;

- Multi-DOS 130 (TOOL) Kuchera/Excellent;
128k RAM 130XE-Ramdisk;

- Multi-DOS 320 (TOOL) Kuchera/Excellent;
320k RAM 26AE = ???, 8ACE = ???;
(note that Multi-DOS 130 and 320 are no DOS-Versions, they can
be used as *.CMC players; all the rest is unknown to me...)

- Multi-Tasking-OS (various ABBUC magazines);
128k RAM minimum 130XE-Ramdisk (+ST-mouse);

- MTOS XE (Tool) CTH / Tom Hunt;
128k RAM 130XE-Ramdisk;

- MTOS 256 (Tool) CTH / Tom Hunt;
256k RAM (64k+192k) 26AE = NO!! , 8ACE = YES!!;

- [Der] Neffe (Game) (ABBUC PD 52);
(the Nephew) XE-Version = 128k RAM 130XE-Ramdisk;

- Neo-Tracker (TOOL) EPI/Allegresse;
192k RAM minimum 26AE = ??? , 8ACE = ???;

- [The] Newspaper-Editor (TOOL) (HAPS PD 0294 english!);
XE-Version = 128k RAM 130XE-Ramdisk;

- Oelbaron (Game) ??? (author unknown);
XE-Version = 128k RAM 130XE-Ramdisk;

- Programmverwaltung 130XE (TOOL) (HAPS PD 0434);
(database 130XE) 128k RAM 130XE-Ramdisk;

- Protracker 1.5 (TOOL) MadTeam;
128k RAM minimum 130XE-Ramdisk;

- (various) Ramdisk drivers (TOOLs) various authors (PD);
128k RAM and more XE-RD`s, Axlon-RD`s, etc.;

- Rechnen fuer Kinder (TOOLs) (ABBUC PD 85);
(calculations for children) 128k RAM 130XE-Ramdisk;

- Rund um die Ramdisk (TOOLs) (ABBUC PD 383, HAPS PD 1084);
(RD-testers, etc.) 256k RAM and more various XE-RD`s & Axlon-RD`s;

- Sample-Art-XE Mozart/WSL
a) minimum 128k RAM 130XE-Ramdisk;
b) more than 128k RAM 26AE = ???, 8ACE = ???;
(on my 576k-XL the program has some gr.-bugs and crashes very often!)

- Shrink-XE Peter Fitzsimmons;
min. 128k RAM 130XE-comp.-Ramdisks;

- [The] Small Printery (TOOL) Walter Lojek;
128k RAM or more (up to 1MB) 130XE-Ramdisk (minimum!);

- Snapshot (Tool) ??? (author unknown);
128k RAM 130XE-Ramdisk;

- [The] Sound-Utility (TOOL) CTH / Tom Hunt;
(64k), 128k, 256k, 576k, 1MB 130XE-RD; 8,A,C,E Ramdisks;

- Space Harrier (Game) Sheddy / Chris Hutt;
128k RAM 130XE-Ramdisk;

- Strategy Baseball (Game) (HAPS PD 0302);
128k RAM 130XE-Ramdisk;

- Studio/Audio Master ANG/Mirage
minimum 320k RAM 26AE = YES!, 8ACE = ???;
(the program is a part of the 4Bit A/D converter software!)

- Super-Print-Lab-XE (TOOL) (HAPS PD 0909);
(demo-version) 128k RAM 130XE-Ramdisk;

- System+Memory Tester (TOOLs) various authors (PD);
128k RAM and more XE-RD`s, Axlon-RD`s, etc.;

- T-34 (Game) (ANG / Mirage);
128k RAM 130XE-Ramdisk;

- (various.) Tape-Copiers (TOOLs) various authors (PD);
128k RAM 130XE-Ramdisk;

- Tape-Ramdisk-Drivers (TOOLs) various authors (PD);
128k RAM and more XE-Ramdisks;

- Text-130 (TOOL) B.Russmann;
128k RAM 130XE-Ramdisk;

- Textpro "+" (TOOL) Ronnie Riche;
(e.g. Vers. 4.54+) 128k RAM 130XE-Ramdisk;

- The Code Cruncher (TOOL) Soused Teat / A.Bienias;
128k RAM and more XE-Ramdisks;

- The Cruncher 5.0 (Tool) MSL / Magnus;
128k RAM and more XE-Ramdisks;

- The [Sparta DOS] Wedge (TOOL) Ed Bachman;
128k RAM and more + sep. Antic! XE-RD`s with separate Antic!;

- The Works (Tool) CTH / Tom Hunt;
128k RAM and more 130XE and A,C,E Ramdisks;

- [Die] Wuerttemberger-Disk (TOOLS) (ABBUC PD 361, HAPS PD 1050);
also contains the XE-version of Gizmo`s castle => see Gizmo`s Castle!;

- (various) XE-Sectorcopiers (TOOLs) various authors (PD);
128k RAM and more XE-Ramdisks;

- XE-Utilities (10 XE-TOOLs) (HAPS PD 0031);
128k RAM 130XE-Ramdisk;

- XL-2 (Tool) John K. Picken;
128k RAM and more all Sparta und DOS 2.x RD`s;

- Zargon (german text-adv. GAME) (ABBUC PD 611, HAPS PD 0485);
128k RAM 130XE-Ramdisk;

- [Der] Zeitungsredakteur (ABBUC PD 121, german!);
(newspaper-editor) 128k RAM 130XE-Ramdisk;

B) Demo-Programs:

- 130XE-Artshow (Koala!) (HAPS PD 0013);
128k RAM 130XE-Ramdisk;
(simply exchange the picture viewer for use with 48k or 64k Ataris!)

- 130XE-Autoshow (Oldtimers!) (ABBUC PD 191, HAPS PD 0637);
(130XE carshow) 128k RAM 130XE-Ramdisk;
(simply exchange the picture viewer for use with 48k or 64k Ataris!)

- 130XE-Demo S.A.G. (Netherlands);
128k RAM 130XE-Ramdisk;
(written in TB; change all D8: entries into D1: for use with 48k and
64k Ataris; exchange Turbo-Basic XL with TB 3.2q, TB 400 or Frost
Basic for use with older 48k Ataris or (most versions of) Sparta-DOS)

- 130XE-Impossible-Demo Rudy Haegemann / V.T.B.;
128k RAM 130XE-Ramdisk;

- Amiga-Boink-XE Bob Armour;
128k RAM 130XE-Ramdisk;

- American Natives Fox-1 / R.Verdaasdonk;
256k RAM all DOS 2 und MyDOS RD`s;

- (X-Files) Animation-Demo Mad Team;
128k RAM ($04 banks / $4b frames) 130XE-Ramdisk;
(the real name of this demo is unknown to me; maybe it is also called
X-Files-Demo, like the X-Files (picture) demo by Sphoon, maybe it has
a different name; on all tested XL/XE Ataris this demo has graphic bugs)

- Animkomials meet Boris Valleyo Animkomials+Boris Valleyo;
128k RAM (gr.9+11 pictures!) 130XE-Ramdisk; (has a setup!);

- Base-33 AIDS / AIDZ;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> hold down SHIFT upon bootup to get to the Setup-menu!)

- Bill-Pie-Demo ??? (maybe Mad Team?);
a) 128k RAM ($1E frames) 130XE-Ramdisk; RD-block E;
b) 192k RAM ($36 frames) RD-blocks A+E (CS, Rambo, etc.);
b) 320k RAM ($4C frames) RD-blocks 8+A+C+E (TOMS, etc.);
(=> this demo chooses the Ramdisk & Setup automatically! users of
a Compyshop or compatible RD can merely see the 192k version!)

- BMW-Animation MS-Soft / Mirko Sobe;
128k RAM 130XE-Ramdisk;

- CES-XE-Demo XANTH (full version);
128k RAM (580 sectors) 130XE-Ramdisk;

- Cogito-Demo AIDS / AIDZ;
192k RAM 26AE = no?! ; 8ACE = YES!! ;

- Comet-Ani MadTeam;
a) 128k RAM ($36 frames) 130XE-Ramdisk; RD-block E;

b) 192k RAM ($6D frames) RD-blocks A+E (CS, Rambo, etc.);
b) 320k RAM ($96 frames) RD-blocks 8+A+C+E (TOMS, etc.);
(=> this demo chooses the Ramdisk & Setup automatically! users of
a Compyshop RD and compatible can merely see the 192k version!)

- Critical-Sound-Demo Innovative;
128k RAM 130XE-Ramdisk;

- Danielle-(Gr.9-TB-)Ani NBS / Bill Kendrick;
a) 64k RAM (499 sectors) Disk = very slowww!;
b) 128k RAM or Harddisk RD/HD = much faster !!;
(=> use your favourite DOS, Turbo-Basic and a RD/HD driver!)

- Edelweiss-Demo A.R. + C.S.S. + S.V.L.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s you can see all demo-parts, however the mainpart,
known as the Edelweiss-Digi-Sample is shorter & sounds strange!)

- Ergo-Bibamus Quasimodos;
128k RAM (with Setup!) 130XE-Ramdisk;
(well, for 130XE and compatible Ramdisks no setup needed!)

- Extract-Slideshow Bit Busters / Replay;
128k RAM 130XE-Ramdisk;

- Glasshead / HTPPD A.R. + C.S.S.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- Halle 1994b: The Wormhole Magic Arts;
320k RAM 26AE = YES!! ; 8ACE = NO!! ;
(well, this demo does not work at all on 8ACE-Ramdisks!)

- (Atari) Hardware-Demo A.R. + C.S.S.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- Igor Demo MadTeam;
a) 128k (Part 1, Part 2) 130XE-Ramdisk;
b) 192k (Part 3) 26AE = YES!! ; 8ACE = YES!! ;
c) 320k (Parts 1+2+3) 26AE = NO!! ; 8ACE = YES!! ;
(=> the demo normally runs a setup for 320k memory; but there are 2-3
batch files for each Setup; goto DOS and install the one you want or
need with the JOB command: JOB @xxxx.BAT [RETURN], then reboot disk)

- Imperial (Sounddemo) Innovative;
320k RAM 26AE = YES!! ; 8ACE = YES!! ;

- Impossible but Real! MacGyver / AIDS;
256k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> press A for 8ACE-RDs, press B for manual setup of other RDs)

- Isolation Demo Masters of Electric City;
128k RAM 130XE-Ramdisk;

- Journey Polynomials
a) 128k RAM ($36 frames) 130XE-Ramdisk;
b) 320k RAM ($96 frames) 26AE = YES!! ; 8ACE = yes!? ;
(=> this demo chooses the Ramdisk & Setup automatically! the demo
has quite some graphic bugs on 8ACE ramdisks, but is viewable!)

- Journey into Sound DGS / Dean Garaghty;
128k RAM 130XE-Ramdisk;

- Khai-Et AIDS / AIDZ;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> hold down SHIFT key upon bootup for the Setup-menu)

- Killer-Whales MadTeam
a) 128k RAM ($2E frames) 130XE-Ramdisk; RD-block E;
b) 192k RAM ($54 frames) RD-blocks A+E (CS, Rambo, etc.);
b) 320k RAM ($94 frames) RD-blocks 8+A+C+E (TOMS, etc.);
(=> this demo chooses the Ramdisk & Setup automatically! users of
a Compyshop RD and compatible can merely see the 192k version!)

- Lajf-Demo MadTeam;
128k RAM 130XE-Ramdisk;

- Landscape-XE-Demo Karl Pelzer;
128k RAM 130XE-Ramdisk;

- Megablast-Sounddemo DGS / Dean Garaghty;
128k RAM 130XE-Ramdisk;

- MTV`s-Danielle see: Danielle-Ani.;

- Nascar-Animation MS-Soft / Mirko Sobe;
128k RAM 130XE-Ramdisk;

- Nonjm-Demo TIGHT;
128k RAM 130XE-Ramdisk;

- Numen-Demo Taquart;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> the newer/updated version has an auto-setup for 26AE & 8ACE RD`s!)

- Owca-Demo Animkomials;
128k RAM 130XE-Ramdisk;

- Owca-2-Demo Animkomials;
128k RAM 130XE-Ramdisk;

- Parrot-X-MAS-Demo Anthony Ramos;
128k RAM 130XE-Ramdisk;

- Pedrokko-Sounddemos Pedrokko (10 Disks / 20 S.);
128k RAM (some demos) 130XE-Ramdisk;

- P.I.T. - Demo Quasimodos;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> a menu appears automatically; setup 15 banks to run the demo!

this demo does not work correct on Ramdisks with refresh-bugs!)

- Raving Vierpz Pentagram;
128k RAM 130XE-Ramdisk;

- Raytracing 320k Elsni/Stephan Elsner;
320k RAM (TB listings!) 26AE = NO!! ; 8ACE = YES!! ;

- Raytracing 1MB Solocoder of A.C.E.;
1088k RAM (K.Peters Megaram 3) works only on K.P.-1MB-RD !!;
(=> Bootdisk with 8 disksides; loading time: approx. 17 minutes!)

- Raytracing Animation Karl Pelzer;
128k RAM 130XE-Ramdisk;

- Revenge of Hacker Rasero Team;
192k RAM (RD-blocks A+E) 26AE = YES!! ; 8ACE = YES!! ;

- Sweet Fantasy TIGHT;
128k RAM 130XE-Ramdisk;

- Sheol Bit Busters;
320k RAM 26AE = NO!! ; 8ACE = YES!! ;
(on 26AE / CS - Ramdisks you will merely receive an error
message like this: sorry, this demo needs 256k of xms RAM)

- Shiny-Bubbles-XE Brian Paul / LACE;
XE-Version = 128k RAM 130XE-Ramdisk;

- Stash-Demo Rasero-Team;
320k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> in the first menu press A for 8ACE Ramdisks or press B for
manual setup of other Ramdisks like Compyshop; in the second menu
press A for 8ACE Ramdisks or C for manual input of Rambanks; don`t
press B -Compyshop- here, since this CS setup is faulty/wrong)

- Starwars-Demo A.R. + C.S.S.;
320k RAM (hold down Option-Key!) 26AE = YES!! ; 8ACE = yes!? ;
(the program checks if Basic is disabled via the Option key, thus
an OS with inverted Basic / Option-key function does not work here!;
with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- The Asskicker Shadows Computer Group;
128k RAM 130XE-Ramdisk;

- The Turtles-Demo (Animation!) Ultra-Software;
128k RAM 130XE-Ramdisk;
(the file version by John E. requires 128k, maybe this bootdisk also)

- The Wormhole Magic Arts;
320k RAM 26AE = YES!!, 8ACE = NO!!;
(this demo is part of the Halle Project 1994 demo, side B!)

- Timekeep(er) New Generation;
320k RAM ??? 26AE = NO!! ; 8ACE = YES!! ;

(after loading on an 8ACE-RD be patient! the demo requires some time
for depacking - don`t switch off when you see a black screen, wait!)

- Tit-Demo MadTeam;
256k RAM (with Setup!) 26AE = YES!! ; 8ACE = YES!! ;
(=> the Setup appears automatically; accept or change it !)

- Too-Hard-2 Animkomials (Rippers!);
128k RAM 130XE-Ramdisk;

- Too-Hard-3 Animkomials (Rippers!);
192k RAM 26AE = YES!! ; 8ACE = YES ;
(=> the Setup appears automatically; accept or change it!)

- Too-Hard-4 Animkomials (Rippers!);
320k RAM 26AE = YES!!, 8ACE = YES!!;
(=> the Setup appears automatically; accept or change it!)

- Total Daze TIGHT;
128k RAM 130XE-Ramdisk;

- Trabant Demo / HTPPD A.R. + C.S.S.;
320k RAM 26AE = YES!! ; 8ACE = yes!? ;
(with 8ACE-RD`s the animation uses only A+E blocks and is shorter!)

- Trip-6-Demo Shadows Computer Group;
128k RAM 130XE-Ramdisk;

- Ultra Taquart;
128k RAM 130XE-Ramdisk;

- Vengeance Excellent;
128k RAM 130XE-Ramdisk;

- Vent Excellent+Pentagram;
128k RAM 130XE-Ramdisk;

- Video Blitz Helvetica Bold;
128k RAM (+sep. Antic!) 130XE-Ramdisk + sep. Antic!;

- WAF-Demo (Side B) ABBUC regional group W.A.F.;
128k RAM (2 Parts!) 130XE-Ramdisk;
(=> here the Raytracing and Vector part require 128k memory!)

- Worms-Demo Datri;
320k RAM 26AE = yes!? ; 8ACE = YES!! ;
(with 8ACE-RD`s you see the complete+bug-free version; with 26AE
RD`s you see a shorter and very buggy version with many deja-vues!)

- X-Demo Mad Team;
320k RAM 26AE = YES!! ; 8ACE = NO!! ;

- Xyberscape-XE Bill Le Masurier;
128k RAM 130XE-Ramdisk;

- Zero-Demo New Generation;
128k RAM 130XE-Ramdisk;

Notes: - 256k Compyshop-Ramdisks, 256k K.Peters-Megaram 1,2,3
and Mathy`s 1024k RD have/use 26AE Ramdisk blocks;
- afaik all other 192k / 256k Ramdisks have ACE (8CE)
or 8ACE blocks (Newell, Peterson, Buchholz, TOMS, etc.);
- ??? means unknown; TB means Turbo-Basic (XL);
- HTPPD means Hobby-Tronic-Power-Pack-Demo;
- YES!! means the demo works as it should (100% correct);
- yes!? means the demo works but has some bugs or is shorter
(50-80% correct);
- no?! means the demo almost does not work and has many bugs
(10-40% correct);
- NO!! means the demo does not work at all - it refuses to load
or crashes shortly after loading (0% correct);
- sep. Antic means separate Antic access of the Ramdisk;
(only 2 programs seem to exist: Video Blitz & The Wedge);

Thanks and credits go to Russ Gilbert, Bernhard Pahl and Mathy van
Nisselroy for sharing their info with me. Any corrections and/or updates
are welcome... - Andreas Magenheimer

Subject: 8.13) What voice/sound synthesis software is there for the Atari?

This section by Andreas Magenheimer.

- S.A.M. - the Software Automated Mouth by Don't Ask Software (a
software package; you can find it at Don`s / the author's homepage:
http://www.retrobits.net)
- Softsynth (a PD program, that creates sounds and sound effects via
modulation of the tv/monitor speaker; available from the ABBUC library);
- MOD-Sounds (sound-MODulation, allthough I do not know any software to
create such sounds on an A8, some programs to edit (Protracker) and
playback (Inertia, Modplayer, Neotracker, etc.) these sounds do exist);

Subject: 8.14) What programs support stereo and upgraded sound?

This section by Andreas Magenheimer.

There is already a lot of stereo software for the upgraded Atari computers
available, of course most of these programs are limited to certain/special
upgrades and merely perform their stereo effects on these items (with
otherwise upgraded or non-upgraded Ataris, the sounds or programs will
only play in mono):

a) software for the various stereo-upgrades:

- stereo with one Pokey (POPS-software): Afaik for this kind of upgrade, there merely exists a patched version of the Pokey player program, I am not sure if there is anything else for it; anyway, refer to Analog Computing, issue 66, november 1988, pages 54 -60;

- stereo with two computers (thus two Pokeys): Afaik for this simple trick there merely exist two programs, they are "Perestroyka" and "Sky Network" by T.Liebich. In order to achieve the stereo effect, you have to boot/load one of these demos on two computers (connected to different TV's or monitors, there is no need to connect the computers to each other!). When done, press 1-5 on the first computer while pressing Shift-1-5 on the second computer. Meaning, if you want to hear the first sound in stereo then press 1 on computer 1 and press Shift-1 on computer 2 simultanously (that`s a little tricky, I know). If you want to hear sound 5 in stereo, then press 5 on computer 1 and Shift-5 on computer 2 simultanously. Tricky at first, but sooner or later you will get the hang of it. Of course you can also connect the two Ataris to a hifi-system, using the sound output of one Atari for the left channel and the sound output of the other Atari for the right channel...

- stereo-sound with Stereo-Blaster Pro (Portronic/AMC): Afaik there was at least one demo disk (early version was single-sided only, later versions were double-sided), that contained some demo-software, namely the simple "Stereo-demos" (by AMC, side 1) and the "Stereoblaster-Demo" (by HU-Soft, side 2 if available). The Stereoblaster demo was written in Turbo-Basic and played back via Compiled-Turbo-Basic, it uses Chaos Music-Composer Sounds (*.CMC) and a few of these provide stereo effects, if equipped with a stereo-blaster-pro and a hifi-system. The simple stereo-demos included some programs written in Atari Basic, for example a (pong-like) bouncing ball and a flying helicopter. Equipped with a stereo-blaster-pro and a hifi-system, one could see the ball bouncing left and right and simultanously hear the sound fx on the left or right channel. The helicopter started at the left side and produced a loud sound on the left channel, when it was flying to the right side, the sound faded on the left channel and got louder on the right channel, until the helicopter disappeared (and the sound completely faded away). There were some more of these simple demos available, but I don`t remember them anymore.

- Stereo with two Pokeys: There already exist dozens of sounds and demos, that support this upgrade, most of these programs were made in Poland, but a few sound-demos were also made in other countries. Anyway, the following programs support stereo via two Pokey chips:

- Alf-Demo by the Unknown Base (Netherlands);
- Alpha-Demo by GMG (Slovakia);
- AMS-Stereo player by ??? (author unknown), USA;
(there are at least two AMS-stereo-players, that let you play *.AMS sounds in true stereo or at least simulated stereo!);
- ARS-Mori 16k Intro by Tristesse (music shortened and ripped from Drunk Chessboard by Infinity!), Poland of course;
- Ballada sound by DJ V / BK (Poland);

- Base 33 by AIDS (msx by Greg, Poland);
- Chaos Music Composer version x.x patched by ??? , Poland;
(=> the original version by Janusz Pelc / LK Avalon is only mono,
but there is a patch available, as well as various patched CMC
versions on the internet; thus *.CMC sounds can be generated in
stereo!);
- (many) *.CMC sounds created by one of the many stereo-versions of
Chaos Music Composer;
- Cogito-Demo by AIDS (Poland)
- Do you see the light? sound-demo by Roemer of UNO (Germany);
- Draconus, patched version by ANG and/or Micro Discount (NL/UK)
(the original version by Zeppelin games is only mono!);
- Drunk Chessboard by Infinity (music by X-Ray!), Poland;
- Dynakillers (Game) by GMG, Slovakia;
- First of All (sound) by Raster, Czech Republic;
- Impossible but Real Demo by MacGyver (Poland);
- King of Aggregat by X-Ray / Slight (Poland);
- Megaplayer Versions 1.6 and 2.0 by MacGyver (Poland)
(=> and thus all *.CMC, *.MPT, *.TMC, etc. sounds played with
this sound-player tool can be heard in true or simulated stereo!);
- Multi-Pro-Tracker 2.4 (various versions) by Jaskier/Taquart?
(=> thus *.MPT sounds can be generated in stereo!), Poland;
- (many) *.MPT sounds created by the stereo-version of Multi Protracker;
- Nazebany by DJ V / BK (Poland);
- Overload sound by X-Ray / Slight (Poland);
- Raster Music Tracker 1.x by Raster, Radek Sterba (a PC program
that creates mono/4-channels or stereo/8-channels *.RMT sounds that
can be played back on the A8 or any Atari 800/XL/XE emulator);
- (most) *.RMT sounds created by Raster Music Tracker;
- Stereo-Patch for Pokey Player by ??? (author unknown)
(=> thus all Pokey-Player / *.V sounds can be heard in stereo!);
- Stereo-Patch for Softsynth by Freddy Offenga (Netherlands)
(=> thus Softsynth will create stereo-sounds!);
- Stereo Patch for World of Wonders by Freddy Offenga (Netherlands)
(World of Wonders is a great Softsynth sound-demo!);
- Still Alive (TMC-sound) by Greg, Poland;
- Time sound by X-Ray / Slight (Poland);
- Theta-Music-Composer version 1.x by Greg (Poland)
(=> thus *.TMC sounds can be generated in stereo!);
- (most) *.TMC sounds created by Theta Music Composer;
- Vanity sound by Kuchara / Excellent (Poland) ;
- Worms (320k-Demo) by Datri, Czech Republic;
- Zybex, patched version by ANG and/or Micro Discount (NL/UK)
(the original version by Zeppelin games is only mono!);
- thats all what I found so far... (A.M.)

b) software for other sound enhancements:

- enhanced-sound with Covox: Afaik this upgrade will playback digitised or
sampled sound in 8Bit resolution rather than in 4Bit resolution. The
following programs support the Covox-Upgrade:

- Inertia 2.9, a MOD-player by MadTeam;
- Inertia 4.5, a MOD player by MadTeam;
- Protracker x.x, a MOD-editor and player by ???;
- NeoTracker 1.x, a MOD+NEO+... player by EPI/Allegresse;
- that's all I have found so far;
note that all programs (except neo-tracker?) will still work with pokey...;

Subject: 8.15) What games support online action via modem?

This section by Andreas Magenheimer.

- Modem Chess, a PD game in Basic by ???
- Modem-Battleships, a PD game in Basic by ???
- Tele-Chess, a PD game in Basic by ???
- probably some more games...

(I have also seen an advert from GCP in Analog or Antic, that listed
the following games: The City, Cybertank, Cybership, Bio-War, Lords
of Space; I am not sure if they are all available for the Atari, A.M.)

To play these games online, one would not only require an Atari computer,
but also a modem, a modem-driver and/or a terminal program (like Kermit,
Bobterm, Teleterm, A-Term, Ice-T, BBS Express Pro, etc.). See also the
sections 7.8, 10.1 and 10.2 which tell you more about modem/terminal
programs and modem hardware for the Atari...

Subject: 8.16) What programs support Atari computer networking?

This section by Andreas Magenheimer.

There are two different hardware add-ons which provide a "computer-
network" (two or more Ataris linked together). Thus, there is software
that supports either one or the other hardware (namely Gamelink-1 or
Gamelink-2). The following software supports the networking hardware:

- Gamelink-1 (by Dataque):
- info-text about GL-1 and where to buy it, by Dataque;
- Tic-Tac-Two by J.Potter/Dataque, a tic-tac-toe clone;
- Modem-Battleships, patched by Rick Detlefsen for Gamelink-1;

- Gamelink-2 / Multilink (by Dataque & Bewesoft):
- info-text about GL-2 and where to buy it, by Dataque;
- info text about Maze of Agdagon demo, by Dataque;
- Maze of Agdagon demo (1 player only) by Dataque;
- documentation for Maze of Agdagon (full version) by Dataque;
- Maze of Agdagon (full version, 2-8 players) by Dataque;
- description of multilink/gamelink-2 hardware and schematics by
Bewesoft (two texts, one in czech and one in english; schematics
presented as an Atari Gr.8 picture for a) easy-2-computer hardware
and b) more complicated 2-8 computer hardware);

- Multi-Dash (2-8 players, XL/XE only) by Bewesoft;
- Multi-Race (2-16 players, XL/XE only) by Bewesoft;
- description of "how to program networking games for multilink
[gamelink-2] hardware" (text available in english and czech, with
lots of source codes and OS adresses/variables/...) by Bewesoft;
- Multi-Worms (2-8 or 2-16? players, XL/XE only) by Bewesoft;
- complete + documented source code for Multi-Worms by Bewesoft;
- "starter-kit" module to use in your own networking-games by Bewesoft
(free use of this module is granted by Bewesoft/Jiri Bernasek);

Subject: 9.1) How can I work with .arc files on my 8-bit Atari?

ARC.EXE for MS-DOS was released by System Enhancement Associates (SEA) around 1985. It will compress and store groups of files as one file, making it easier and quicker to download programs and support files at once. Because of the ease of use and availability of this program, it quickly became the defacto standard for file archives on Intel-based IBM machines. Files compressed and stored with ARC or a compatible utility are normally given the filename extender ".arc".

The 8-bit Atari computers have several software utility options that are fully compatible with ARC.EXE, the most important being:

Super UnArc 2.4 and Super Arc 2.4 - shareware by Bob Puff, released 01/31/89
Available:
http://www.nleaudio.com/css/files/superarc.arc (complete package + docs)

Also, SpartaDOS X includes a fully compatible ARC command for both creating and extracting .arc files.

Subject: 9.2) What file formats for entire disks/tapes/cartridges are there?

It is now common, especially when working on Windows PCs or Macs, to work with Atari software as files or "images" containing the data from an entire disk, data cassette, or cartridge as duplicated from the native media for the Atari.

Here is a list of file formats, arranged by their associated filename extensions. These are all filename extensions used to name files containing entire 8-bit Atari floppy disk images, cassette tape images, or cartridge images.

.DCM -Image format invented by Bob Puff for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.
DISKCOMM is at http://www.nleaudio.com/css/files/DISKCOM.ARC
DCM specs at: http://home.planet.nl/~ernest/diskcomm.zip

.ATR -Image format invented by Nick Kennedy, for his SIO2PC project.
Used with most 8-bit Atari emulators running on other computer platforms. SIO2PC is at http://www.tcainternet.com/wa5bdu/

.XFD -Image format invented by Emulators Inc, for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used with ST Xformer and PC Xformer emulators.
Xformer is at http://www.emulators.com/

.PRO -Image format invented by Steven Tucker, for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.
APE and APE ProSystem are at http://www.atarimax.com/

.SCP -SpartaDOS SCOPY image file. SCOPY was a utility by ICD.

.DI -Image format invented by Kolja Koischwitz & Christian Kruger for their
800XL DJ emulator for the Atari ST.

.CAS -Cassette image format invented by Ernest R. Schreurs, for his
Digital Cassette Image system (includes CAS2SIO, WAV2CAS, and CAS2WAV
MS-DOS utilities. See: http://home.planet.nl/~ernest/

Atari Disk Image FAQ (Steve Tucker)
http://www.atarimax.com/ape/docs/DiskImageFAQ/

One tool for converting among all of these disk image formats is:
Acvt v1.07 by Jindrich Kubec, found at http://jindroush.atari.org

---

Subject: 9.3) How can I copy my copy-protected Atari software?

Russ Gilbert writes:

Almost all commercial software for the A8 is/was copy protected. For boot
disks, this usually involved a large number of special formatting that
couldn't be copied using ordinary sector copiers. Usually the boot process
involved checking to see if a certain sector error occurred, then proceeding.
If the error did not occur, the disk was a copy and would not work.

For carts, usually the method of protection was to write to the cart area of
memory and see if the value changed. If the value changed, the cart program
was in RAM, not ROM and would fail to operate.

For tapes, again a fair number of schemes were used. Some varied the speed at
which the tape loaded. I'm not familiar with tape protection schemes.

With all software media (cart, tape, disk), there may be program encryption,
which must be decrypted before the program can run. This to make more
difficult disassembly of the program.

There were/are a number of products to defeat copy protection/allow copying of
protected software for the A8. The most common way to defeat copy protection
was to disassemble the software and revise sections of code so that the copy
protection was defeated. A software with defeated copy protection is called a
'cracked' software. The basic procedure is to understand how cart/tape/disk
software initializes, loads and runs. Usually make a file out of the software
and 'follow the code', starting with loading of the program, to decryption to
the actual running of the program. Today, it is unnecessary to copy original

commercial A8 software because it has already been defeated and may be found at a few ftp sites. (Note umich archive has no commercial/non-shareware software.)

Besides 'cracking' software, there were/are hardware devices to copy commercial protected software. The Happy 1050 and the Archiver, and probably other modifications to the 810, or 1050 allowed 'bit image' copying and reproduction of the special formatting that copy protected disks had. Using these archiving disk drives, a copy of the original disk, including all special formatting and the original code is copied, thus making a copy protected copy, not cracked, just like the original.

For carts, copying could involve cracking or again there were/are products to reproduce the cart and simulate a ROM. Or the cart might be copied and burned on the correct type of eprom, to make a plug in cart. 'The Impersonator', the 'Pill' are two cart copy schemes copy the cart to a file, then don't change the code, but use a 'dummy cart' to fool the software into thinking there is a ROM present.

Basic tools for copying, then cracking, carts and disks are a sector editor and disassembler. Carts are usually most easily dumped using a special OS, like Omnimon, to interrupt the cart and dump memory to disk. There are a few pd cart copiers that have the user plug the cart in when the program is running, I don't believe these pd cart copiers are very good or very wise to use.

So, the basic answer to 'how do I make a copy of my copy protected commercial software' is don't bother. Find it on the net.

There is one exception, in that this 'solution' involves a minimum of effort and is relatively safe. I refer to 'Chipmunk' and 'Black Patch' software to make cracked boot disk copy of commercial disks. HOWEVER, even if you use these two commercial archival tools, be sure you write protect your originals, and be careful not to accidentally write to the original disk.

Finally, I'll mention a very modern (I mean 1997) product. The APE ProSystem, by Steven Tucker, in the registered version of this shareware allows making disk images called 'Pro' images. APE (Atari Peripheral Emulator) requires a cable, called the SIO2PC cable, that connects the A8 13 pin serial port to a serial port on the IBM PC clone. To make 'Pro' images, a special adapter cable is needed, not just the 'standard' SIO2PC cable. The 'Pro' image can 'capture' the copy protection of an original commercial disk. The 'Pro' image can then be loaded into an A8 using the APE registered version software, thus backing up your original disk software. Note the 'Pro' image will only be of use to person(s) owning registered APE software and 'Pro' adapter cable.

Subject: 10.1) What programs can log in to other computers via modem?

Here are some of the more popular PD/freeware/shareware terminal emulator and related programs available. Use one of these programs for accessing a dial-up Bulletin Board System (BBS) with your Atari, or for accessing a dial-up "shell

account" with your Internet Service Provider (ISP). Dial-up shell accounts
are no longer widely available here in the 21st century! (There is no
general-purpose PPP capability for the 8-bit Atari that I am aware of.)

ATAR-Z-MODEM 1.2, 5/29/94, shareware by Larry Black
Emulates: n/a
Text: 40 columns in gr.0
File Xfer: ZMODEM download
Autodial: No
Backscroll buffer: No
Capture-to-disk: no
Summary: Intended to be used as an external ZMODEM receive utility in
conjunction with other terminal programs, especially BobTerm
http://www.umich.edu/~archive/atari/8bit/Telecomm/Protocols/atzmod12.arc

BobTerm 1.22, shareware by Bob Puff
(There's also a 1.23 release that's specific to PC XFormer)
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; best for BBSing
Available: http://www.nleaudio.com/css/ (version 1.21)
ftp://ftp.spudster.org/pub/atari/cth/terminal_programs/BOBTM122.ARC (com only)
http://people.a2000.nl/becotel/archive/bobt123.arc (1.23)

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
ftp://ftp.spudster.org/pub/atari/cth/terminal_programs/FLICK051.ARC

Ice-T XE v2.72 (128K XL/XE) or Ice-T 800 v1.1 (48K)
shareware by Itay Chamiel
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: X/Y/ZMODEM download
Autodial: Yes (2.72) or No (1.1)
Backscroll buffer: Yes--8 screens (2.72) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.72) or No (1.1)
Summary: Outstanding flicker-free high-speed VT100 emulation.Recommended!
Available: http://www.cs.huji.ac.il/~itayc/

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)

File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: k65v37.arc ; k65doc.arc - docs ; k65src.arc - source

OmniCom by CDY Consulting (David Young)
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Only option combining VT100, XMODEM, Kermit
filename: omnicom.arc

PabQwk 2.0, 1 Feb 1994, shareware by Low-Budget Productions (Pab Sungenis)
Requires: 128K XL/XE
Emulates: n/a
File Xfer: QWK upload/download
Summary: The Professional QWK reader for the Atari 8-bits. (QWK is a
packet format created in the IBM BBS community for reading mail
offline.)
http://people.a2000.nl/becotel/archive/pabqwk20.arc

Term80 1.6 (8.25.95), by CTH Enterprises (Tom Hunt)
Requires: MIO or Black Box
Emulates: ANSI
Text: 80 columns in gr.8
File Xfer: XMODEM receive, YMODEM send/receive
Autodial: Yes
Brackscroll buffer: No
Capture-to-disk: Yes
Summary: Designed for calling IBM ANSI BBSs at the highest possible
speeds supported by the MIO and Black Box (14.4 Kbps)
Available: http://cth.dtdns.net/Featured/term80/term80.html

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Only option for VT100 emulation on the XEP80; 1200bps top speed
filename: vt850b1.arc

Subject: 10.2) What programs can I use to host a BBS on the Atari?

The 8-bit Atari was particularly popular for hosting a dial-up Bulletin Board System (BBS). Uploading/downloading files, online messaging, even online gaming services can all be hosted on an 8-bit Atari operated as a dial-up BBS.

This section attempts to list all BBS programs for the Atari. Of these, BBS Express! Professional and Carina II BBS seem to be programs that stand up well even today.

Contributors to this section include: Winston Smith, Steven Sturza, Chad Hendrickson, Don Fanning, Matt Singer, Pete Davis, Jeff Williams

o AMIS BBS -- The Atari Message Information Service, public domain.
The "granddaddy" of BBS programs for the 8-bit Atari.

The AMIS BBS was written in BASIC by people from the Michigan Atari Computer Enthusiasts. It included designs for a ring-detector. You needed a sector editor and had to allocate message space by hand, hex byte by hex byte.

Several versions of AMIS:
* Standard AMIS
* MACE AMIS - from the Michigan Atari Computer Enthusiasts
* Fast AMIS
* MPP AMIS by Matt Pritchard
* TODAMIS 1.0, for 1030/XM301, 1986, Trent Dudley

o ATABBS -- Rod Roark writes (3/12/03):
This is really straining my memory -- don't recall exactly when I wrote the thing (maybe '80 or '81), but as far as I know ATABBS was the world's first BBS for the Atari 400/800.

I ran it out of my condo in Atlanta on a 48K 400 with an 80K floppy drive and a 300 bps Hayes Smartmodem. The 48K memory module was a third party add-on, not Atari's.

It was written in Atari BASIC with a few bytes of machine language thrown in.

o ATKeep -- An Atari 8-bit version of CITADEL BBS, by Brent Barrett
ATKeep is a Citadel-like BBS system for eight-bit Ataris. ATKeep runs under SpartaDOS and requires BASIC XE and 128K of RAM. Originally "MBBBS (Message Base Bulletin Board System) 1.0, March 24th, 1986" MBBBS was changed to Atari Keep, or, ATKeep for short, around version the time version 4.0 was released (June 15, 1986).

ATKeep 7.0 finally took the aide and cosysop commands out of a menu section and put them into extended commands, where they belonged. It also added a SYSOP level command set. Users were no longer "users" "aides" or "cosysops," they had become level "A" (SYSOP) through level "Z" (READ ONLY). The system had become extremely complex. Public, hidden OR password protected PRIVATE rooms. Each room now had its own access level (thus keeping people of lower level from getting in EVEN if they knew the room name). Each room was assigned a RWRT (or Read WRiTe status), which determined who could enter messages in it, and whether or not public or private messages, or both were to be allowed.

Before version 7.0, ATKeep only worked with the Atari 1030 or XM301 modems.
ATKeep 7.0 was rewritten to accomodate the 850 or PRC interface allowing use
of any Hayes compatible modem.

ATKeep version 7.50 was released (1987), was version 8 released?

o BBCS -- Bulletin Board Construction Set, by Scott Brause/Antic, 1985
A machine language program, developed as the Jersey Atari Computer Group
(JACG) BBS system.

BBCS was known for it's great flexibility. The sysop was offered easy
customization by the use of menus. Many BBSes before it required that you had
to actually change the BASIC code in order to customize your BBS.

Unfortunately, it also suffered from a reputation for stability problems.

o BBS Express! -- 1986, Leith Ledbetter/Orion Micro Systems
Written in compiled Action!. 1030/XM301 and 850 versions.

o BBS Express! Professional ("Pro!")--6.0b 1999, Lance Ringquist/Video 61
Originally by Keith Ledbetter/Orion Micro Systems.
See also http://cth.dtdns.net/pro/pro1.html

Written in 100% machine language.

Requires XL/XE, SpartaDOS 3.2+, hard drive highly recommended, or at least a
large ramdisk. R-Time 8 is fully supported.

o Carina II BBS -- v2.7 (1995), David Hunt/Shadow Software
Carina II was originally developed by Jerry Horanoff.

Requires an XL or XE computer, at least 500K of storage capacity (including
ramdisk and drives), and SpartaDOS version 2.3 or greater.
Recommended: 192K ramdisk or greater, and an R-Time cartridge.
Fully supported: An MIO interface and a hard drive.

More Carina II information and links:
http://jybolac.virtualave.net/carina/

Pete Davis writes (15 Aug 2002):
Carina was a pretty powerful BBS system. Though it was written in BASIC (with
a number of machine language routines), it was expandable and had was able to
load new BASIC programs with the BBS running. In fact, it was quite modular
and would load different sections of the BBS at runtime. I actually used it
when I ran a BBS some time back.

o Carnival BBS -- essentially AMIS with an overlay to allow for private
messages and passwords.

o FoReM BBS -- Friends of Rickey Moose BBS. By Matt Singer.
At the time, there were a lot of BBSs around called things such as "FORUM-80"
and "BULLET-80", ergo the name. FoReM BBS was the first truly RBBS-like BBS
for the ATARI 8-bit. It was programmed in BASIC and was somewhat crashy. I
think that this is the great-grandparent of the FOREM-XE BBSs that survive
today.

Matt Singer writes:
FoReM BBS derived from an early AMIS. When multiple message areas were added the name was extended to FoReM 26M. Then, When OSS released BASIC XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most of the Assembler routines (where is he now?).

o FoReM XL BBS -- by Matt Singer.
FoReM BBS updated to take advantage of BASIC XL from OSS.

o FoReM XE BBS -- by Matt Singer
This version of FOREM BBS requires the commercial BASIC XE cartridge in order to run. It is in the public domain and can import and export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only, control ATASCII graphics are reserved for message data-structure bytes).

o FoReM XE Professional BBS / FoReM XEP BBS -- by Len Spencer
A re-write of FoReM XE BBS, last version was 5.4, Jan 5 1993.
FXEP requires an XL/XE computer with at least 128k of memory, the BASIC XE cartridge from OSS/ICD, SpartaDOS 3.2 (this program will NOT work with any other version), and at least 500K of storage.

FXEP is in the public domain, http://members.aol.com/lenspencer/

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston, Massachusetts, USA, area.

"1983: Nite-Lite B.B.S. goes on the air. (Was it running A.M.I.S. ?) It is called "Nite-Lite" because the computer monitor casts an eerie glow about the room. 1984: Paul Swanson writes his own BBS hosting software for the ATARI 6502 8-bit computer. He names it "Nite-Lite". The Nite-Lite BBS hosting software goes on to be the most successful commercial BBS software ever written for the ATARI 6502 8-bit computer. 1989: Nite-Lite BBS puts in a second line. (MichTron boards eventually take the place of all of the ATARI Nite-Lite boards.)" - Winston Smith

This BBS was the first to support a RAMdisk, which Paul Swanson called a "V:" device for "virtual disk". This BBS was written in Atari BASIC and required a joystick hardware "dongle" device. This was notable as being one of the first Atari 8-BIT BBSs that could actually go for a week without having to be rebooted. Pointers to the message base were kept in an Atari "very long string" (for which Atari BASIC is famous). The BBS would only have problems (for the most part) if this string became corrupted.

o OASIS (the commercial version) / OASIS Jr. (the pd version)
Originally by Ralph Walden, then Leo Newman took it over, followed by Glenda Stocks/Z INNOVATORS, then Alf (Jeff Williams).

All machine language. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". An excellent message system, and a complex file system. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing,

as it discourages file hogs). OASIS IV performs networking.

Glenda Stocks writes at http://world.std.com/~snet/glenda.htm :
I purchased the source code rights to OASIS and began marketing the BBS software to Atari 8-bit enthusiasts around the world. I felt that I had the superior BBS software because I had programmed in the ability to run external programs, including online games and user surveys. I also had added color prompts for IBM clone users who called Atari boards running my OASIS software. Sometime in 1991...I sold the rights to OASIS to a man in Canada..

Jeff Williams ("Alf") writes: (12/6/02)
OASIS was around prior to either PRO or BBS Express IIRC. I don't know when exactly it showed up, version 3.09 was the first one I remember seeing. What made it nifty was it was very fast, being all assembler, and having some different features that things like Forem & Carina didn't have. Compared to something like Forem MPP at the time, it was kind of amazing.

Ralph Walden sold it to Glenda Stocks, who chopped it up into modules and sold it as ver 4.7. PRO was out by then, and was a much more complete offering imo. Glenda wrote some modules for 4.7, but it never really went anywhere because the architecture was so cramped with her changes.

Eventually she gave up and sold me the source. I looked it over and realized it was a mess and nothing was going to happen with it. I worked on a version 5 for a while, but never made much progress.

o SMART BBS -- by Marco Benton.
This program is written entirely in BASIC. It expects to be running under a SpartaDOS environment. This BBS program uses a "modem clock string" rather than an R-Time 8 cartridge in order to retrieve the current time. It also comes with an Atari BASIC game door called "Sabotage".

Subject: 10.3) How can I read/write 8-bit Atari disks on an MS-DOS PC?

There are several programs that allow an MS-DOS system to work with an Atari-format 5.25" diskette. Each of these work with the Atari SS/DD 180K format, so you'll need an Atari DOS and disk drive capable of this format.

#1 Choice:
AtariDsk V1.2 (c) 95-12-09 by HiassofT (Matthias Reichl)
http://www.horus.com/~hias/atari/

#2 Choice:
MyUTIL by Mark K Vallevand. Based on Charles Marslett's UTIL.
http://www.umich.edu/~archive/atari/8bit/Diskutils/Transfer/myutil.zip
Includes SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

Other similar utilities:
ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
www.umich.edu/~archive/atari/8bit/Unverified/Diskutils-redist/atario21.arc
SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
http://www.umich.edu/~archive/atari/8bit/Diskutils/Transfer/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks.
http://www.wordmark.org/

Here's some advice on using the above utilities from Hans Breitenlohner:

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width.
The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on
either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

Jon D. Melbo sums it up this way:
So a basic rule of thumb when sharing 360KB floppies among 360KB &
1.2MB drives is: Never do any writes with a 1.2MB drive to a disk that
has been previously written to in a 360KB drive....UNLESS... you only
plan on ever using that disk in the 1.2Mb drive from then on out. Of
course a disk can be reformated in a particular drive any time for use
in that drive. As long as you follow that rule, you can utilize the
backwards compatible 360KB modes that most 1.2MB drives offer.

While the above mentioned utilities work with SS/DD 180K Atari-format disks or
SS/DD 180K SpartaDOS disks, the following combination of utilities has been
used successfully to read SS/SD 90K Atari-format disks. So if you only have

standard Atari 810 and/or Atari 1050 drives, you could look into:

AnaDisk -- now a product of New Technoligies Inc. (NTI)
See: http://www.forensics-intl.com/anadisk.html
The current version is "not made available to the general public" (!)
Previously a product of Chuck Guzis @ Sydex, http://www.sydex.com/
Older versions available: http://ch.twi.tudelft.nl/~sidney/atari/
- Reads/Writes "any" 5.25" diskette

DeAna by Nate Monson
Available: http://ch.twi.tudelft.nl/~sidney/atari/
- converts AnaDisk dump files from Atari format

See http://ch.twi.tudelft.nl/~sidney/atari/ for tips on using this
combination of utilities.

Preston Crow writes:
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.

For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 10.4) How can I read/write MS-DOS PC disks on my Atari?

Several 3rd-party hardware upgrades add the capability of working with
MS-DOS diskettes to your Atari system:

Happy 1050 upgrade for the Atari 1050
-- read/write 180K 5.25" MS-DOS floppies

CSS XF Single Drive Upgrade for the Atari XF551
-- replace the 5.25" mechanism with a 3.5" mech.
-- read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFsingdrup.htm

CSS XF Dual Drive Upgrade for the Atari XF551
-- add 3.5" drive without losing the 5.25" drive
-- read 720K 3.5" MS-DOS disks
see http://www.nleaudio.com/css/products/XFdualdrup.htm

CSS Floppy Board, for the CSS Black Box
-- adds support for PC 720K and 1.44MB 3.5" drives to your Atari system
-- adds support for PC 1.2MB and 360K 5.25" drives to your Atari system
-- read/write 5.25" and 3.5" MS-DOS disks in your PC drives with your Atari
see: http://www.nleaudio.com/css/products/floppy.htm

Subject: 10.5) How do I transfer files using a null modem cable?

This section by Russ Gilbert.

Q: How do I connect two computers using a null modem cable?

A: You need a term program and RS 232 ports on both computers. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 baud, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25 pin port. 25 pin #2 goes to Atari #4 (XMT to RCV), 25 pin #3 goes to #3 on Atari (RCV to XMT) and #5 of 850 goes to #7 of 25 pin (GND to GND).

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go to the left 1 to 13 then #14 is under #1 and left again so that #25 is under #13.

Most term programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not. I have only used 'Procomm 2.4.3' (the last shareware version of Procomm) on the PC and BobTerm on the Atari, but other term programs may work.

To check your null modem connection, start both PC and Atari term programs, set baud to 2400 or 4800 on both computers. No parity, 8 data bits, 1 stop bit on the PC. Be sure to use the correct COM port on the PC. Go to 'terminal' mode and you should now be able to type on either computer and see it on the other screen. To accomplish a file transfer, use Y-modem probably from BobTerm, rather than X-modem. X-modem will often append bytes to a file transfer, an undesirable event. There is also a very nice Z-modem recieve program for the Atari, called ATAR-Z-MODEM by Larry Black for the Atari.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors (Radio Shack) some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modems and plugging in the null modem cable into the two modem cables. This also avoids the confusion of variations in the computer ports. Most computers connect into the modem end via a standard RS232 DB25 connection. With this both ends 25 pin cable, you would cross pins 2 and 3 and connect the #7s together to make a null modem cable.

The SIO port on the Atari cannot be used directly. An 850, P:R: Connection, MIO, Black Box or similar device that provides an RS232 port must be used.

Following are pin assignments for a DB25 pin RS 232 C port.
1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

For higher speed connections, above 4800 or 9600, you need the flow control lines and Atari term software that has flow control built in. You also need an MIO or Black Box, which uses the PBI (parallel bus). A high speed cable would need not only XMT, RCV, and GND, but also flow control lines. I suggest a commercial null modem from computer store to ensure correct lines. A null modem is a small adapter with the correct lines already crossed. I don't know how to correctly connect the CTS, RTS, DTR, DSR, CRX lines for a high speed null modem. With a null modem, you just plug it into the 25 pin connectors of the two modem cables you might already have connected to your Atari and PC or Mac. You may need a straight thru 25 pin gender changer also.

Following is in this FAQ elsewhere, but I summarize here: (Figure out or look for pin numbers on the ports.) Note that these are pin assignments, and NOT null modem connections with the XMT, RCV crossed and GND straight thru.

Atari 8-bit PC AT 25 PC AT 9 pin
---
1. DTR 20 4*
2. CRX 8 1*
3. XMT 2 3
4. RCV 3 2*
5. GND 7 5
6. DSR 6 6
7. RTS 4 7
8. CTS 5 8
9. No connect? shield RI
22 RI

Note: * above indicates the difference between an AT 9 pin and a Atari 8-bit 9 pin cable connector. eg. If you check continuity from pin 3 of 25 pin end and it goes to pin 4 of nine pin end, you have an Atari serial cable. If pin

3 of 25 pin goes to pin 2 of 9 pin end, you have a PC
serial cable.
(updated 3/1/99)
(DTE = Data Terminal Equipment ie. your computer.
DCE = Data Communications Equipment ie. your modem.)

Subject: 10.6) How can my Atari use my PC's HD using SIO2PC or Atari810?

SIO2PC
======
From the SIO2PC home page, written by Nick Kennedy:

SIO2PC is a hardware & software package interfacing the 8-bit Atari to PC
compatible computers.

The original idea was to have the PC emulate Atari disk drives so Atari
programs could be stored on the PC's hard (or floppy) drives. It turned out to
be quite successful. About 95% of my work was in the software, but a hardware
device to convert logic levels was also necessary. This device is now commonly
referred to as an SIO2PC cable.

Features:
- Emulates 1 to 4 Atari disk drives
- Store your Atari files on PC hard or floppy drives
- Boot from the PC, real drive not needed to start-up
- No software or drivers required for the Atari;
no conflicts: use your favorite DOS
- Twice as fast as an Atari 810 drive and more reliable
- Co-exists with real drives in the Atari daisy chain
- Compatible down to the hardware level: use sector copiers, etc.
- Print-Thru captures Atari print-out and routes to PC's printer
- Convert Atari files to PC files and vice versa
- 1050-2-PC version connects PC directly to Atari disk drive

Nick Kennedy
http://www.cswnet.com/~nkennedy/

Another source for building SIO2PC cables is Clarence Dyson's page at
http://www.wolfpup.net/atari/atari.html

Atari810
========
Atari810 1.4d, by Dan Vernon, is a disk drive emulator in the tradition of
SIO2PC, for the Windows NT/2000/XP platform
http://retrobits.net/

Subject: 10.7) How can my Atari use my PC's HD, printer and modem using APE?

David A. Paterson writes:

"Steven J. Tucker took SIO2PC one better and wrote new software.
The Atari Peripheral Emulator (APE for short):

- lets your PC act as high-speed drives.
- It lets you print to your PC printer.
- And it lets you use your PC modem on the 8-bit."

http://www.atarimax.com/

Subject: 10.8) How can I connect my 1050 to my PC with the APE ProSystem?

The APE ProSystem goes beyond APE. The ProSystem has two components:

- The program PROSYS.EXE is used to create the protected and unprotected disk images which are then used by APE.

- The ProSystem hardware is a cable designed to allow direct connection of a stock 1050 disk drive directly to a PC's serial port for use by the PROSYS.EXE software.

http://www.atarimax.com/

Subject: 10.9) What about interoperating with the Apple Macintosh?

Mark L. Simonson keeps a nice set of web pages which he calls "Mac/Atari Fusion: Atari 8-bit Resources for Mac Users." Please visit:

http://www2.bitstream.net/~marksim/atarimac/

Subject: 10.10) Are there 8-bit Atari tools for the Commodore Amiga?

'551conv', freeware by Achim Hartel:
Converts a real Atari-800-disk, .xfd-image or .atr-image into a real Atari-800-disk, .xfd-image, .atr-image or extracts the files of the disk (-image). All 4 formats of the XF551-station supported: Single, Medium, Double, Quad. Version 1.03.

Subject: 11.1) How did Atari get its name?

Graham Thornton types:

This article was published in "I/O - The Magazine of the Atari Home Computer Club" in issue 3 - Summer 1983. The magazine was the official mouthpiece of Atari UK. The article was not attributed to any one person. The words are theirs, not mine.

How Atari Got It's Name

The name Atari actually comes from Japan. And yet the company is most definitely American. Every wondered why? It's an interesting story and one well worth telling.

In 1972 three friends decided to invent and market the first commercially feasible video game. They were Nolan Bushnell, Ted Dabney and Larry Bryan.

To become a partner each man had to submit $100 to the project - a remarkably small sum when you consider the company's success! The next step was to find a name.

Drinking beer and thumbing through the dictionary one day, the three friends came across an interesting entry under "S". The word was Syzygy, or "the straight-line configuration between three celestial bodies". What a perfect name they thought, for three such astronomically talented people!

Now they could get on with the business of inventing games. Their first, Computer Space, was produced and all seemed to be going well.

But then things started to get a little shaky. Larry Bryan decided not to ante up his $100 and pulled out, leaving Bushnell and Dabney to go it alone.

The set up a shop in Santa Clara, California, and incorporated the business. A little later they invented Pong.

Busnell and Dabney applied for the name Syzygy to the Office of the California Secretary of State, which regulates Californian corporations, but were told that they were too late. The name was already taken.

Following unsuccessful attempts to buy the rights to the name from the first Syzygy corporation, which appeared to be inactive, the friends' solicitor pressed them to think up an alternative.

This proved difficult. BD Inc and DB Inc were tested and then rejected in turn: the first bore too close a resemblance to Black & Decker, the second to Dunn and Bradstreet.

Inspiration occurred at last, once again in an informal atmosphere. Bushnell and Dabney were both keen players of Go, a Japanese strategy game, and their best brainstorming always occurred over a good game and a bottle of beer.

This time, they decided to make a list of several Go words to see if one of them would fly as the new corporate name.

First choice was "Sente", which means "the upper hand" - something that greatly appealed. Second and third choices were "Atari", which has a similar meaning to the English word "check", and "Hanne", an acknowledgement of an over-taking move.

Busnell and Dabney submitted the list once again to the Office of the Californian Secretary of State, which approved "Atari". The rest is history.

When the company name changed, Bushnell and Dabney decided to update the logo too. They incorporated the "S" from Syzygy and the "A" from Atari into the new design.

It was not until later, as the company became increasingly successful, that an advertising agency designed the slicker and now famous Atari logo - the "fuji" or stylised "A" design.

Subject: 11.2) What is the History of Atari?

Here is a very condensed history of Atari, centered around their 8-bit computers.

1972
Atari Inc. is formed by Nolan Bushnell, incorporated on Tuesday, June 27. Atari created the first coin-operated arcade video game with the introduction of Pong. The video game industry was launched and has shaped pop culture ever since.

1976
Warner Communications acquires Atari Inc.

1977
Atari launches the Video Computer System (VCS), later known as the 2600, giving birth to home video game systems.

1978
In December, Atari announces the Atari 400 and 800 personal computers, using the 6502 microprocessor.

1979
Atari files with the USPTO for a patent for a "Data processing system with programmable graphics generator" (the 400/800 computer system) on January 8, 1979. Inventors listed:
Mayer, Steven T. (Auburn, CA);
Miner, Jay G. (Sunnyvale, CA);
Neubauer, Douglas G. (Santa Clara, CA);
Decuir, Joseph C. (Mountain View, CA)

The Atari 400 and Atari 800 Home Computers debut at the Winter Consumer Electronics Show (CES) in early January.

Jerry Jessop writes:
"The first official small shipment of the 400/800 was on August 29th 1979. These were hand-built pilot run units to Sears that needed to be in stock by Sept. 1 so they could be placed in the big fall catalog. The units were placed in the Sears warehouse and then immediatly returned to Atari after the "in stock" requirement had been met.

The first "real" consumer units were shipped in Nov. of '79 and were 400s to Sears followed very shortly by 800s."

All Atari computers are tested at the factory by a master computer called the Atari Sentinel System.

1981
From Atari Connection magazine:
"At the National Computer Conference in Chicago on May 5, 1981 Atari announced that the 8K Atari 400 was being discontinued and that the price on the 16K version was being reduced to $399."

The USPTO grants U.S. Patent 4,296,476 to Atari on October 20, 1981 for the 400/800 computer system. Read the full text of the patent here: http://makeashorterlink.com/?M2561456

November: 400/800's begin shipping with the new GTIA chip in place of CTIA, increasing the palette of simultaneously displayable colors to 256 and adding 3 new graphics modes. CTIA is totally phased out by the end of the year.

Jerry Jessop adds:
"The very first proto systems did have the GTIA, but it had some problems and was not released in the consumer version until 1981. The GTIA was completed before the CTIA."

1982
The introduction of the 1200XL in late 1982 marks the single largest advance in the 8-bit Atari system.

1983
In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL.

1984
Warner Communications sells the Consumer Electronics and Home Computer divisions of Atari Inc. to Tramel Technology on Monday, July 2.

Atari Corporation is formed by Tramel Technology and its products marketed under the Atari brand.

{ Warner sells the AtariTel division of the former Atari Inc. to Mitsubishi Electric, and the former AtariTel becomes Luma Telecom.

A complete line of cutting-edge telecommunications products had been under development at AtariTel since 1981, but no products had been released under Atari.

However, the Atari Videophone was nearly completed, and the product eventually surfaced as the Mitsubishi Luma Video Phone, aka Luma-Phone, aka LumaPhone. "The Visual Telephone"

Mitsubishi has since shut down Luma.
}
(
Warner also initially retains the arcade division of the former Atari Inc., and renames it Atari Games Corporation. Soon thereafter, Atari Games is a private, independent entity, though Warner remains a major investor.

Atari Games inherits Atari copyrights/trademarks/patents for use in the coin-operated arcade video game market.

1987
Atari Games creates the Tengen label for the purpose of marketing games for home game systems (potentially competing directly with Atari Corp.)

1993
Atari Games is (re-)purchased by Time Warner.

1994
Time Warner consolidates Atari Games into Time Warner Interactive. Use of both the Atari Games and the Tengen brands are discontinued.

1996
On March 29, 1996 WMS Industries (Williams, Bally and Midway) completes its purchase of Time Warner Interactive. Upon the sale, Time Warner Interactive adopts the Atari Games name and logo, and Atari Games is made a division of Midway Games.

1998
In April of 1998 WMS spins off to shareholders its entire stake of Midway Games, making Midway Games essentially an independent entity. Atari Games remains a division of Midway Games.

1999
Atari Games releases San Francisco Rush 2049. This turns out to be the last coin-operated arcade game sporting the Atari Games name and logo.

January 2000: Atari Games is renamed Midway Games West, and games produced by the group will sport the Midway Games brand.

June 22, 2001: Midway Games announces it is exiting the coin-operated arcade video game market; its game development efforts will now be focused on games for home game platforms. The Midway Games West division lives on, developing games for home systems for Midway Games.

February 7, 2003: Midway Games shuts down their Midway Games West division.
)

1985
The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985.

According to Atari Explorer magazine, the 130XE was engineered by Jose Valdes.

1987
In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system.

1992
Atari (US) officially dropped all remaining support of their 8-bit computer line on January 1, 1992. (Some 800XE's were still being manufactured in China in 1992.)

1996
On July 31, 1996, in a "reverse merger," Atari Corp. purchased JTS, with the new parent company taking the JTS name while Atari was immediately designated a JTS subsidiary. JTS Corp., with headquarters in San Jose, Calif., was founded in 1994 to design, manufacture and supply enhanced-capacity hard disk drives for the notebook and desktop personal computer markets.

1998
On February 23, 1998, JTS sold its Atari Division to HIACXI Corp., a wholly-owned subsidiary of Hasbro Interactive, Inc., which was a subsidiary of Hasbro, Inc., for $5 million in cash.

(JTS filed for Chapter 11 Bankruptcy Protection on December 11, 1998, and then converted it to Chapter 7 on February 28, 1999)

Hasbro Interactive produced games for several platforms, including PCs running MS-Windows. Some of Hasbro Interactive's games, including several re-makes of classic Atari titles, were marketed under the Atari Interactive name and logo. Atari Interactive was termed "a Hasbro Affiliate."

Games produced by "Atari" under Hasbro ownership included:
Atari Arcade Hits 1 & 2, Breakout, Centipede, Missile Command,
Nerf ArenaBlast, Pong, Q*Bert, The Next Tetris, Atari Greatest Hits

2001
On January 29, 2001 Infogrames Entertainment announced completion of its acquisition of Hasbro Interactive from Hasbro, renaming the subsidiary "Infogrames Interactive." The purchase included the Atari titles and intellectual properties (known at Hasbro as "Atari Interactive").

Between 2001 and 2003 Infogrames placed the Atari brand on some of its "premiere" gaming titles.

2003
Beginning May 7, 2003 Infogrames Entertainment adopts the Atari brand and registered trademark for all operations, effectively changing the name of the entire company to Atari.

Additionally, the Company's wholly-owned subsidiary, Infogrames Interactive, Inc., which develops many of the game derived from the Hasbro line of board games, changes its name to Atari Interactive, Inc.

TODAY = http://www.atari.com/

Infogrames Entertainment
==========
Founded in 1983 by Bruno Bonnell and Christophe Sapet, Infogrames Entertainment SA today has more than 1,800 employees worldwide (approximately 60% in Europe and 40% in the U.S.). A publicly traded company, Infogrames Entertainment SA (Euronext: 5257) is one of the top five publishers of interactive entertainment software in the world and is widely regarded for developing and distributing quality games for the mass entertainment audience.

Infogrames SA comprises two main subsidiaries: 1) the U.S. based, publicly traded Atari, Inc. (Nasdaq: ATAR); and 2) Atari Europe, which represents the

Company's original operations. Atari, Inc. includes the former GT Interactive; Atari, Inc. also manages Atari Interactive, Inc. (the former Hasbro Interactive) on behalf of its parent company.

Hello Michael,

I had a similar order to yours, and it was filled promptly and
followed up by a long-distance call from Mike. Those must have been
the days before he ran into trouble, because others I know well had
serious problems with him that were never resolved.

Take care.

Alan

It is somewhat disappointing to hear that so many fellow Atari users are having such problems in their business dealings with FTE, I can only hope and trust that FTE buck up their ideas/pull their finger out and sort out this mess they've created, as it doesn't help Atari Users and FTE themselves in attracting more NEW 3rd party commercial support of Atari H/W users in what in unfortunately a dwindling market nowadays, if this is the way FTE conduct themselves in business

IN saying that though, I do remember from my school day's, I was told that most international Industrialized markets Legal legislation and framework is largely based or is a sub sect of the English legal framework, and therefore English law

With that in mind, I am pretty sure that in most parts of Europe (predominantly the EU) and most parts of Asia and North and Cont. USA, you have something similar to Consumer Law and Advertising Law

In addition to that I am also pretty sure that in these other non UK markets, you have something similar to what we call in England ☐Trades Descriptions Act/Law" and also "Sale of goods Act/Law" (which as I am told also applies to suppliers/providers of services) and also in addition to that that most major industrialized markets have an Advertising Standards Body (like the ASA in the UK) to oversee and make sure that commercial establishments who advertise comply and adhere to advertising law

In addition to that, anyone who receives a written document to support a business transaction, under English law anyway, does constitute a ☐contract' or ☐agreement' and therefore constitutes a legally binding document (I am sure this also applies to most international markets)

I hate to whittle on and bore the crap out of my fellow Atari Users, but I've always been a fan of ☐standing up for your consumer rights' or ☐statutory rights' as we call it in England

Lastly, I thinks it's fair to say that FTE can run and hide all they like, but they neglect to relies that the LAW (like GOD) works in mysterious ways and FTE will get caught and found out eventually (in saying that of course there is always TWO SIDES TO A STORY)

Happy Atari'ng

I think I have finally put my finger on what strikes me as being so unusual about this. Verbose explaination as usual.

About 2 months ago 3 items<motorcycle parts> from two different vendors on eBay I bought for ~$42 hadn't arrived. I turned in a 'failed to deliver report' to Paypal. One of the transation resulted in Paypal telling me "Looks like you are out $20" and the other resulted in a $22 refund.

My point: For the friggin life of me I can't remember the name of the outfits that were involved in the non deliver of goods. The one I got a partial refund for had the name "tammy" somewhere in the email address I think. I don't care anymore as both of the bad actors are now off/suspended from eBay. Just bought some more parts off eBay in the last month as a matter of fact. I let it go and got on with my life. It's OVER!

I'm not sure when FTE went belly up, 1990 or so, that was 14 years ago! Yet 14 years latter FTE is still the persona non grata ahead of the Tramiels, Warner, you name it.

I'm American of Sicilian descent, I know the meaning of vendetta. I still have some hard feelings that go back 40 years. There are people I have avoided for 20 years and I plan on putting a provision in my will that they not be allowed to attend my funeral. Still a lot of people out do me with the vendetta thing. I did not think that possible.

In relation to the Dataque T816 upgrade, apparently the publisher of this u/g did also come out with a 816 aware o/s, apparently the early versions were very buggy (according to article in the UK based Atari newsletter 8/16 by BaPAUG) BaPAUG also tried to market the upgrade in EU/UK (don't know how successful the were (I did meet one of the partners of BaPAUG several times at various UK atari events ... embarrassingly enough I can't remember his name, might have been colin or chris, definately something beginning with C)

Anyway Mr Steinmann (the proprietor of Dataque) according to the rumours I heard did try an swing a deal with Atari themselves (so that he could design a patched xl/xe/800 o/s to be 816 aware) atari apparently nixed the deal (unsupprisingly) stating that Atari wanted betw. 10-50 USD for every patched Atari o/s rom sold with the unit

This is why dataque walked away from it and come out with it's own 816 aware o/s (they apparently came out with some patches for the various atari programming/3rd party programming carts (for them to be 816 aware)

One of the packages offered (in the UK/EU at least was Turbo view (a gui based 816 aware o/s) and an 816 aware assembler editor programme (apparently u could also edit 650x code as well

Not that I wish to try and correct inaccurate information but in relation to Omnimon and Omniview, I fail to see Newells relationship with these products as I seem to remember from the ad's that David Young @ CDY consulting was responsible for these products (and therefore the originator) unless newell bought out David young/CDY or bought the product rights, I cant quite see the assoc./relationship betw. newell and the CDY products

1869. Average size of a disk game???

Howdy folks

Can somebody please tell me if the snail mail address as shown on the CSS site www.nleaudio.com/css is still being used by CSS? Does anybody live close enough to physically go there and check it out.

I've ordered from Steve a couple times. Last time took a little while, and
I had a similar experience to you not receiving email for a while, but I
did indeed eventually receive what I ordered.

I say keep trying until you get ahold of him. You'll get him eventually.

Seems so. Very recently I ordered a flash cart and received it in a
reasonable time (across the ocean). He also replied most of the e-mail
but almost never in a prompt manner. Seems that the matters need to get
"mature" on his side before he takes actions ;-) kidding... I sugges to
try on or use some other channels. (Forums?)

Here are a few differences comparing the motoercycle parts from ebay
and the FTE thread that keeps hanging around:

1. This is a nostalgic newsgroup about Atari8 and all things related.
Therefore it is understandable that past matters are still discussed
here from time to time, if not even a lot.

2. As you so aptly pointed out, you can find numerous other suppliers
of motorcycle parts. Because FTE is hiding, there is no more FTE to
do business with. This deprives the Atari8 community of opportunity.
There is much more scarcity in the A8 area.

3. For people that dealth with FTE, there was no PayPal to intercede
in the middle of the transaction.

Other than that, I guess it's all about the same.

>I'm American of Sicilian descent, I know the meaning of vendetta. I

Now that's some real heavy stuff. Instead of trying to prevent them
from attending your funeral, why not let them attend, but will that
certain statements be read to all those in attendance? Certain
statements which will make the assholes transparent.

I really hope he's still in business because I placed an order with him
about two weeks ago - still waiting on it. I also won an ebay auction of his
about a week ago - again still waiting. Haven't sent him emails about the
purchases yet but he did respond promptly to questions I had about the APE
trial I was having problems with. He really did help with his responses to
my iquiries. I'm sure he'll make good on our orders.

Tom,

Hi, I ordered one of Steve's modified 1200XLs. It took about three months to get, but it did eventually arrive. I ran into the same phone and e-mail issues. I'd say just be persistent. I'd call and/or e-mail every couple of days until you get him. Steve will get back to you. At least that's been my experience.

Good luck,
John

I had my 400 upgraded to 48k years ago and also got a regular
keyboard install. I had never heard of a 64k upgrade, but I would
not dought that it exists. I would try either B&C Computers or
else Best Electronics. I know I have seen the upgrade at these
places. Good luck....

The first one sounds familar and I think it is called "The
Knightmare". It mainly takes place in a castle, but there is a
cemetary outside that you can go to. It is very old, bought it in
the early 80's and is still fun to play. I could be wrong, but
hey, it is just a guess.

The motorcycles I was buying parts for were a 1974 Kawasaki G5 and a
1975 Kawasaki KS. I attend AHMRA<American Historic Motorcycle Racing
Association> races and belong to several discussion groups about the
same. The oldest bike I restored is a 1971 TS 185 for my grandson.

IOW: More nostalgic, passionate, and active, then anything Atari.

There is a vendor list posted here monthly with people still selling
Atari items like Best and B&C<www.myatari.com> under their new
incarnation. A while back someone posted that Bob Puff would even do
another run of Black Box(es) if he got enough preorders.
>
> 3. For people that dealth with FTE, there was no PayPal to intercede

AFAIK: Paypal only intercedes if the money hasn't been transferred to
the sellers account. I still lost $20 out of $42.

Ah, OK. I had a quick look at the MyDOS source code (4.50 and a version
Lee emailed me some time ago). There are several addresses to look for:

The one is the default directory (D:), labels DIUNIT (the drive number,
$10 = D1:, $20 = D2:, etc) and CDIREC (the sector number of the
default directory, lo/hi byte).

The other location is within the file control block (of the current
CIO channel, each FCB is 16 bytes long) and is called DIRBAS. It
contains the directory start sector of the current open file.
This means you could simply do a "OPEN #1,6,0,"Dx:SOMEDIR:*.*"
to determine the start sector of that directory.

I ran a quick test with MyDOS 4.53/4 and found out that the
addresses are different to the 4.50 source code I've got. So, if you
would like to use one of these methods, you'd first have to determine
the exact MyDOS version (and hope that you don't get it wrong).
Maybe Lee knows a little bit more about that.

In MyDOS 4.53/4 DIUNIT is located at $07B7 and CDIREC is at $07B8.
DIRBAS for #1 is at $0879/$087A, for #2 at $0889/$088A, etc.

so long,

Hias

Take a look at :

http://cgi6.ebay.com/ws/eBayISAPI.dll?ViewSellersOtherItems&include=0&userid=klassische-videospiele&sort=3&rows=25&since=-1&rd=1

There are 24 boxed and new ATARI XL/XE carts for low prices.

For example :

Airball :

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=62053&item=8105395986

Rescue on Fractalus :

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=62053&item=8105395363

Thunderfox :

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=62053&item=8105389281

Crime Buster :

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=62053&item=8105388945

and many more.

Ending in a few hours.

I will take PAYPAL and I can ship worldwide.

MG

1895. Most sophisticated cassette loader?

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-19 20:56:31 UTC
From: fsh <bgtzhn@NoSPAM.gmx.de>
Message-ID: <31d2e$40abc9cc$3e6d682a$14730@nf3.news-service-com>
Source record: 15902

Hi there louts!

I've always envied those C64, Spectrum, CPC, you name it cassette games with their fancy tape loaders. I know loading Atari games from tape is an - uh- unhurried matter, hence the absence of graphics, sounds etc. for most games.

Few games though have really great loaders, e.g. the U.S. Gold games ("Watch out for other great new titles for your ATARI from U.S Gold... Elevator Action... Summer Games II & Winter Games..." ah, well) or "Trivial Pursuit", which seems to bypass the OS' SIO routines altogether and in my eyes (and ears, mind you!) has the coolest loader ever, even cooler than e.g. Elektra Glide's large blocks.

So, hands up for some not-quite-so-usual tape loaders!

Cheers from Germany,

Frank

My favorites were the old originals from Atari like States and Capitals and
Hang man. I love the disco music with the DeeJay sounding guy speaking
instructions while the tape loads.

Source record: 15905

Hey -

Have any of you guys tried the "network" feature in AtariWin (3.1) plus???
If you've been successful (in 2-player or more over a network) let me know
what game[s].

I'll have to give it another shot, but it wasn't working for me last time a
tried a while back.
I wanted to get a multi-player game of M.U.L.E. going over the net.....I
tried a simple set up between my 2 networked PCs at home, but no dice.

-later people,
-z-

I got it working once. I played a game of "One on One" with someone in CA
(I'm east coast). The ping time was a little bad so the game wasn't so
great. I do remember it being quite difficult to do. One of the gotchas is
that both players have to have the exact disk image.

HTH,
~brian

1900. WTB: BASIC cartridge

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-20 13:05:07 UTC
From: Bernie <bkeith@sympatico.ca>
Message-ID: <552rc.69145$325.1486072@news20.bellglobal.com>
Source record: 15907

I'm rebuilding my 400 collection so I need a BASIC cartridge.
Does anyone have one (or two) that they'd part with cheaply? Next to Star Raiders, isn't it one of most numerous cartridges around?

A power supply would be handy, too, but I can improvise.

Preferably in Canada/Ontario/GTA

Thanks.

'A 400 collection?'
A stock 400 has 16K. This would severely limit the things you can do. You could get a BASIC cart, but not be able to run many BASIC programs.
Other than nostalgia for the 400, why not get a 800XL?
Then the next most important thing to get would be a DOS disk and disk drive. Now you're cooking. Throw in an SIO2PC/APE cable and software and you have just about the entire world of Atari 8-bit at your disposal. You can download a file BASIC, Star Raiders, 1000s of programs and games.
But I ramble.

It's sad but true atari-scene is dying. In Poland there are parties like
"Lato Ludzikow" and every time there is the same group of atari-sceners.
They do great job. In Poland is not so bad with Atari-scene but i see
Commodore-scene is bigger than Atari now.

1909. XL & XE Repair help needed!!!

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-21 04:32:41 UTC
From: kokkiklhs@yahoo.com
Message-ID: <d97adc24.0405202032.2416d9c7@posting.google.com>
Source record: 15916

Hi there!
I recently acquired a lot of 3 computers from an auction, all out of order, and need some advice, trying to fix them...
The symptoms have as follows:

800 XL & 130 XE

Full BLANK RED screen on power up, no other reaction, no self-test, no nothing..

800 XE

Same as above, but with a still vertical white line on the left side of BLANK RED screen... Seems that on this one were once soldered 8 more 4264s for RAM expansion, now removed, but PCB looks OK!

On all 3 computers, every component and IC is in its place, I looked on working ones for comparison! I also checked my PSU, works fine with other 800 XL & 130 XE!
Tried piggy-backing some working 4264 SRAMs over the existing, nothing at all happened!
This trick has ALWAYS worked for me with RAM-fried C=64s & C=128s!
I suppose this is not RAM problem! Unfortunately all 3 computers have no socketed ICs, they're all soldered directly..
Any suggestions??? Would very much appreciate any kind of help!
TIA and greetings from Athens-Greece!!!

Hello
I don't know if this is possible but if it is I'm interessted too.
WD1772 is with this 3,5" PC floppy or its on other place?
I know that my LDW Super 2000 5,25" floppy for atari can read pc disk's in
dos format, it's modified from original (very high speed transfer, 720kb
disk support and other things, but i don't have any instructions to this so
i don't know how to use all of the enchancements).

I'm from outside US too, and I calculated it to my own currency (PLN) and
its not so expensive.
I'll buy it in summer (maybe the 8mb version because I see it's not so
expensive but maybe more usefull).
But this cartridge is cool.

Hmm,
I think you should get a printed manual and some more Sparta-DOS stuff
if you licensed the copy, but I am not sure. Anyway, since I already
have the shareware version of sparta, it just does not matter. My
friends had less luck, they ordered and paid Action! and Mac 65 from FTE
and got nothing in return. So all they can do now is use pirate copies
(file versions, which work not as good as the original cart versions
though; no bank-switching you know)...

Source record: 15924

I'm wanting to unload a system, figured I would give the
newsgroup a shot before ebay. I'd like $30 plus shipping
from Zip 85711.

Atari 800 computer
Power brick, nice dustcover, monitor cable
1050 floppy drive (stock)
Power brick, cable
Atari Touch Tablet (don't know what it does, never tried it)
BASIC XL cartridge and book
Commercial educational software (disks and cartridges)
Many disks
DOSes
Games
Applications

The past 20 years I'm working with atari 8bit computers I have seen MANY red screens on the atari 8bits.

I have experienced this can be several problems.

But most of the time it was:

1) Bad RAM
2) Bad CPU (6502)
3) Bad ROM IC

Please do NOT piggy back good rams on bad rams... soldering rams is really tricky at all and the can be harmed VERY easily. Even if you think they are ok, the might be instable after your solder-adventure ;-)

My first advice: please try to replace ram with 100% good.

Marius

YEAH I AGREE!!!!!

I have "European Countries and Capitals" ... and I really love that american accent this guy is talking with!

By the way: in European Countries and Capitals there is a MAJOR mistake. The Capital of The Netherlands is AMSTERDAM (it has been Amsterdam for centuries now haha) ... but the program told me it is The Hague. How wrong!

I live in the netherlands... believe me: it is AMSTERDAM :-)

I think theres not needed to solder all the chips, when they're removed, put in their place sockets for these chips and no more needed to solder such things.

Hello
I'm using 1010, XC12, XCA12, CA12 because I've got many software on cassette's (some about 150-200cassetes, most in normal mode and almost every cassette is original). I've got disk drive too but I'm trying to learn how to use all of the enchancements of this drive. It's LDW Super 2000 and has modified soft (faster load up to 19200baud rate maybe more, can double the disk size, can read pc dos disk's).
But my first cassete player was 1010 and I think this is the best model of cassete player Atari made, it has such things as hardware modulated sound.

Hi!

I am porting some cool demo's to tape, especially for some cassette-only users I know. They pay me the price of a cassette and shipping costs, and they are happy with their stuff. It is a cool job... and amazing to see some of the best demo's ever written, running from TAPE!

I still think every person supporting the atari computer, is great!

Bravo Sierra Computers is doing a fantastic job, and thanks to Bravo Sierra Computers (and others like Best-Electronics) we are still able to purchase things in good condition.

If you do not want to buy from him, simply ignore him.

I'm VERY glad he is posting in the newsgroups.

Thanks

1930. Atari 8-bit $5 Weekend special: PPP Games double pack

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-21 23:16:29 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <1085181347.2883.0@lotis.uk.clara.net>
Source record: 15937

Hello All,

We're running another $5 special over this weekend. This week, it's a double pack of the commercial PPP games Rubberball and Bombi. These two excellent games are available this weekend only for US$5 the set including shipping to any country! (UK buyers may pay in Pounds). That's less than half price! To order with a credit/debit card (through PayPal) and for more info on the offer, please visit our website: http://www.dgs.clara.net

We will be running more special weekend offers in the coming weeks, so keep a look out on our website.

Dean Garraghty

The upgrade I have is from/via The Windhover Project newsletter..it
modifies the 400s ram card.
64K can be useful. A 101 sector ramdsik can reside in the upper 16K.

The file and pic are on my site: www.a8maestro.com/atari/info/ballhc.htm

Looks like I struck out on this one. I thought that one of the drivers from the "Happy Hacker" might have supported the 800, but looks like they were all for the XE/XL.

I did remember that WARP DOS from Happy Computers worked with the 800. And the closest thing that I found was Top Dos, which added a Happy Warp Module. There are probably other Dos versions that had high speed support, too.

I have to agree with Marius, but I'd like to qualify it a little bit.

My only contact with Atari8-bit computers at this time is through emulation. Ben Smith cannot sell me anything. In spite of that, I think he's doing a service by posting each month to let people know that they can still find products related to the Atari 8-bit.

But I have to say that three wordy messages where one brief one will do can be objectionable to some people. It doesn't bother me.

Take care.

Alan

I paid 70 pounds (GBP) for MAC65 (cart version) this was in the day's b4 they had an official UK importer (even then the prices didn't come down that much) I bought mine, as many did thru sillica shop (sidcup branch).. It pains me to say it, but I rarely used it anyway, and that includes it's relative, the Atari assm. Cart (but i still have it and believe it or not... the manual)

1942. creating binary files from ATR files using Atari 800win built in MLM

I would like to create my own binary files, from the ATR files that already proliferate the internet, Just as I did when I was using my Atari xe (with built in ultimon/omnimon, the various game disks I had and superdos (as it gave a lower memlo and u could load in upto 255 sectors or 32k worth of sectors)

I would like to do this thru Atari 800win+ (v40b3), however I am told that the monitor part of atari800 win+ only defaults to drive one (which means it cant be done.. as u would need 3 disks, disk two would be a blank dos formatted ATR, disk, disk one would be the dos u are using (superdos) and disk 3 is the ATR file u are trying to hack

Is there a working version of Omnimon/Ultimon available on the net that u can use as o/s overlays, or any of the more recent european equivalents like Qmeg, Speedy o/s etvc.etc)

any help, greatly apprec..

Happy Atari'ng

It's one of the Marc Russell Beinoff series of Epyx games, probably "The
Nightmare", I believe there were three others: King Arthur's Heir,
Escape from Vulcan Isle, Crypt of the Undead. Fun games. I remember
getting them all at a software liquidation sale (huge tent in a parking
lot) for something like $5 each.

1947. Game loader NDOS III as ATR image

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-23 18:42:49 UTC
From: FBergemann@web.de
Message-ID: <95e97960.0405231042.25568f8b@posting.google.com>
Source record: 15854

Hi,

there are games available as *.exe or *.bin or ATR for ATARI XL
Emulator.
But when trying to load *.exe or *.bin, i need to use a DOS (e.g.
Mydos).
Some games don't work being started from a DOS - i guess, because the
DOS takes some memory.
For using the old XL Hardware and the floppy we used a game loader
called NDOS III.
Is this available on an ATR image somewhere?

- Thanks!

Best Regards!

Frank

Ah yes, the manual that proudly proclaims 'all listings are double checked
and guaranteed to be correct'. Including the one that begins '10 ERROR - '
of course.

with atari800win you can load an exe or bin file without using dos,
just load it from within the emulator and it boots up.

This NDOS thing I have somewhere, I could put it on an atr for you.

But... i have a much better alternative:

micro spartados (by Bewedos).

Make a 16mb atr. format it with spartados. Use the microspartados
gameloader, and there you go!

All you .exe, .bin, .com etc. files are loadable, and you can store up to
16mb in ONE atr!!!

I modified this gameloader for MyIDE btw. So you are able to use it with
myide too.

Marius

Hi Frank,

> I've always envied those C64, Spectrum, CPC, you name it cassette games with
> their fancy tape loaders. I know loading Atari games from tape is an - uh-
> unhurried matter, hence the absence of graphics, sounds etc. for most games.

Well, the big difference between the C64 and the Atari tape is that the
Atari hardware (the one in the computer) is actually unable to decode
the audio signals on the tape. Thus, there's additional hardware in the
tape recorder to do that, so writing "custom" tape loaders (e.g. to make
loading faster, quite usual on the C64) is rather hard for the Atari.
You cannot change the audio frequencies coding is based on or the tape
hardware would freak out... I've heard from a hardware modification of
the tape recorder to speed it up (together with a custom SIO then), but
that's about it...

So long,
Thomas

Hi Daniel, try this for starters.

http://cgi.ebay.com.au/ws/eBayISAPI.dll?ViewItem&category=1250&item=8105672523&rd=1

Perfect timing, eh. If you want I could probably build you a new PSU. I
can also look at the units if need be. But I reakon it will be stuffed
power supply. Call me at work on 9596 0822 if you like.

Mark

As I understand it there were various tape speeder mod's (hardware) and quiet a few were czech based (based on the zx speccy type loader) and also 1 or 2 were UK based, the UK based one were released at different times but were one of the same thing (I remember it called RAMBIT... or was that the company) derek fern/firn (he of microdiscount fame- a brum if there was ever one) basically released the same product under a different name (A bit like the lazer/warp lazer, and the hyperdrive-1050's mods)

There were even a few software based one's released (I remember that they only increased the baud rate by 25 p/c to 900b) including the one that came built in, with the O/S controller card (computerhouse/stocksoft) this one allowed u to go upto and over 1200baud (100 p/c) computerhouse also used this o/s controller card patch for their own mod'd xl/xe systems thayt they were selling (they must of done... as I saw ad's of theres in Page6 and AU (database pub's))

1956. "Retro Extreme."

Newsgroup: comp.sys.atari.8bit

Cross-posted to: comp.sys.cbm,comp.sys.sinclair,comp.sys.oric,comp.sys.amstrad.8bit,comp.sys.atari.8bit

Greetings all,

We are interested in looking at modded/upgraded "retro" systems for a possible upcoming feature. Things like an Amstrad CPC with 3.5" disk drive, Texas TI "PEB" systems, Sinclair Basic SE, C128 with SuperCPU etc... You get the idea.

In the office, I have brought in a C128 with SuperCPU, RAMLink, SmartMOUSE, FD2000, Retro Replay + RRNET (I've actually got the bloody thing working!!) and other Commodore hardware stuff, so It'd be really easy to start with Commodore, but I'd rather start with other formats.

Just to note that I'm no expert in any way, so this is why I've posted this thread. Basically, I'm thinking along the lines of what computer you have, who you are, how you have modded/upgraded it and what it can now do etc... I'm not interested in people who put PC technology into retro cases. It has to be building on the original technology somehow. The "PC in Retro cases" will probably be covered at another time, although I hate it when you see something really rare being ripped apart just so it can have a PC inside it. We'll probably also follow up with 16/32 bit systems such as the Amiga, Atari ST and Sinclair QL. (Okay, technically the Texas TI99/4a is 16 bit, but it belongs very much to the 8 bit era to my mind.)

Anyway, please contact me if you are interested; Also, if you know anyone who has done some cool stuff with BBC Micro, MSX and other systems, please forward this on to them.

Cheers,

Shaun.

If you want to keep using MyDOS, I'd recommend MyPicoDos from my homepage http://www.horus.com/~hias/atari/ . The latest testing release is not yet linked from my homepage, you can download it from http://www.horus.com/~hias/atari/mypdos40-test3.zip

MyPicoDos supports 720-65535 sector disks/images in SD and DD (up to 16MB), MyDos subdirectories, D1: to D8:, and it is able to load EXE/COM, BAS, and BIN (boot) files. You can either use the initializer program to make disks bootable, or use the included ATR-file in D1: and a disk/image with a bunch of files in D2: to load files without writing the bootloader to it.

Furthermore, version 4.0 additionally supports long filenames, an automatical basic on/off switch, XF551 format recognition, Bibo DOS long directories (128 files on QD disks) and is available in a 'smart' high speed version (high speed SIO code is automatically enabled/disabled depending on the drive's capabilities) and a 'standard' version (using only the OS routines for disk access).

so long,

Hias

Well,
if you are talking about the Nano-DOS converter by S.Baucke, yes, I have this gamedos (and many others, like Micro-DOs, Pico-DOS) on an ATR image... Just e-mail me to get a copy... -Andreas.

Well,
Micro-sparta-DOS uses spartaDOs format, of course. If you are searching
for a DOS 2 compatible gamedos try Nano-DOS, Micro-DOS or Pico-DOS
instead (or the Speed-Start-Initializer)... The new version of PicoDOS
(4.x) has the same options as Micro-Sparta-DOS, but of course for DOS 2
/ MyDOS (meaning it supports 720 to 65,535 sectors with 128 bytes each,
as well as 720 to 65,535 sectors with 256 bytes each; will load COM/EXE,
BAS and BIN files, has an ultrasped option, supports up to 8 drives,
supports long filenames up to 40 chars as well as 8.3 filenames, MyDOS
subdirs, etc.)... -Andreas.

1960. Re: Most sophisticated cassette loader?

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-24 11:35:26 UTC
From: Andreas Magenheimer <magea000@students.uni-mainz.de>
Message-ID: <40B1DDFE.A90E01A0@students.uni-mainz.de>
Source record: 15867

Well,
since I used a tape recorder until the early 90s, I know quite some
modified tape loaders. Some were software based, some were hardware
based, for example:

software based loaders:
- Speed Tape by Computer Kontakt (german magazine); should work with
approx. 1000 Baud (only the length of the gaps remainded unchanged);
think it cannot load programs longer than 32k-37k...
- CBAUD by Arndt Baer (also published in Computer Kontakt); should work
with approx 1200 Baud but required two programs: CBAUD-Copy to convert
normal tapes into the faster format and CBAUD to laod the faster tapes;
programs that could be transfered were limited to approx. 37kbytes;
- File-Copier 4.3 by ??? (author unknown) was actually a Cass-Disk
copier program; when loading/saving from/to tape one could choose
short/long gaps and 600 Baud or 800 Baud; limited to 37kbytes;

hardware based loaders:
- turbo 6000: a turbo tape enhancement built in the former GDR (german
democratic republic); it worked with 6000 Baud and required special
loading/saving programs that were available as disk-files and also as
cartridges;
- turbo 2000: a turbo tape enhancement built in Poland or the former
Czechoslovakia; it worked with different speeds (ranging from 600 Baud
to approx. 9600 Baud?) depending on the program itself and the transfer
program; also required a special loading/saving program, available as
disk-files and cartridges;
- rambit turbo tape: a turbo tape enhancement built in the UK by Richard
Gore and sold by Microdiscount (Derek Fern); it worked with 9600 Baud
and came with some special software on disk; Microdiscount also sold
many of its own commercial programs (Zeppelin games, etc.) on Rambit
turbo tape...

Nowadays there is a relatively simple CD-ROM loader for the XL/XE
available. Think it is based on the turbo 2000 concept (and since a tape
only uses 1/4 for data, every CD track has space for 4 different games,
meaning such a CD has space for approx. 500-600 tape games which load in
approx. 1 minute or less). but alas, this CD-ROM interface only works
with turbo-tape speed, which means it is still slower than a normal
floppy drive with 19,200 Baud (only good for tape-based game-files with
a length from 1k to 62k; not usable for big+fast animations or
movies)... -Andreas.

1964. Atari Program for "Enigma?"

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-25 04:48:39 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040525004839.18679.00001259@mb-m26.aol.com>
Source record: 15871

Ok, here's an off-beat question.
I have always been interested in cryptology -- codes/ciphers. And in particular, fascinated with the WWII "Enigma" machines. Does anyone know of an Atari program that simulates the operations of an Enigma? I've found a couple of very good web sites, but something in Basic or Pascal or Action! would be terrific!
Thanks,
Larry

So, do I. I've never invested in the floppy disk drive. Also, the emulators
make tape files more accessible by linking the "C:" device to whole files on
the host system. On the host system, it's easier to manage because I can use
directories and folders and longer file names! I understand that the physical
Atari System is quite the opposite, though. I actually would like to have a
Hard Drive for my Atari. Maybe when I can manage to plug my Atari 800 into my
other computer, then it'll be that way.

Although slightly of topic, but still dealing with our beloved atari

I recently learned that when Atari originally laujnched the 7800 gmaes systems (1984), the 7800 sported what was then the world's most complex and advanced data encryprion algorithm technology at 90bit levels (most data encryption algorithm's these are 128bit or better)- the 7800 encryption was only recently (in the last 3-4 years) cracked- it was mentioned on the Atarihq.com site a few years back (John Hardie was one of the successfull encryption crackers)

Do you fancy yourself as the next alan turing/von neumann (who collaborated to design the world's first electronic computer) the very system that cracked the german emiga codes

Happy Atari'ng

I saw on the net somewhere, don't have the URL handy. But there is a new kit available via mail order that is an electronic replica of the original 'Enigma'. Since mechanical parts were to hard to manufacture and assemble it was done elctronically. I may have seen this on slashdot.org I'll see if I can find it again.

Why? Because I asked for a BASIC cartridge. If anyone has a spare, I'd appreciate it.

You'd think no one else had ever heard of the things you suggest. I'd say anyone that is playing with 20+ year old computers knows the alternatives that are available. I have the rest of what you suggested, now I need a BASIC cart.

check out this link

"The Enigma-E is a DIY Building Kit that enables you to build your
own electronic variant of the famous Enigma coding machine that was
used by the German army during WWII. It works just like a real Enigma
and is compatible with an M3 and M4 Enigma as well as the standard
Service Machines. A message encrypted on, say, a real Enigma M4 can be
read on the Enigma-E and vice versa."

http://www.xat.nl/enigma-e/desc/index.htm

has nothing to do with atari, but you could have your own enigma! So
there you go.

OK, you want a BASIC cartridge. You want to make your 400 work. You have
all the stuff I suggested, so my brief reference to nostalgia is the reason.
I use BASIC regularly, but a file version.
I have one Atari BASIC cart, but I like to use it in a 1200XL.
So, I can't help you. This is the place to ask, maybe someone has an extra
or two. .... I just checked www.atarimax.com.
Steve has a BASIC cart for $3.00. Plus ship to Ontario. Hmm...
customs may be a problem with it. I'm also sure you can get one at Video
61, BCC or Ben Smith, the asa8 vendor list is extensive and maybe hard to
figure which vendor has what you want. I think those three would be places
to check.

1977. Re: Atari Program for "Enigma?"

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-26 07:11:09 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040526031109.28807.00002337@mb-m28.aol.com>
Source record: 15884

Thanks for the interest and link! The kit is quite interesting.

I have spent a couple more hours searching and had the best success by Googling "Enigma simulation in BASIC". The best link I've found for a BASIC program (so far) is
http://www.unix-ag.uni-kl.de/~conrad/krypto/misc/enigma.html
Both the BASIC Program and a "C" translation are available there. The BASIC program is written in MS QBasic (I think), so it would be most like our Atari Microsoft Basic. I think simple Atari graphics could be added reasonably easily.

I actually got interested in codes shortly after I got my first Atari computer in 1982. I wrote a little Q&D encryption program to encode some programs I had written. That got me started.

The History Channel (IIRC) has a very well-done program on Enigma.

Anybody out there still performing repairs on 8bit Computers? I have a 130xe w/576k memory, the CSS 3way OS upgrade and many more that has just become flakely.

I assume its just too many upgrades and maybe things have become loose, but its not apparent.

You definately need to put a bit of space on machines such as Sprinter,
Comodore 1, CPCNG and other such projects.

These at least show that exciting new hardware is being developed with the
spirit of the original machines in mind.

STOP!!! Before going to Auction... Experience Sales, Service and Support! Listing Lower Prices with Dealership Standard! Selling Used & New Atari Hardware, Games/ Software, Books and Accessories! Classic Atari 8 Bit and ST Plus 2600/ 7800 and Atari Jaguar Game Consoles! Come for the Savings, stay for the Service! The Rainbow ends at Bravo Sierra Computers!!!

Hi, I'm Ben Smith, proprietor of Bravo Sierra Computers! I'm an Atari Dealer/Reseller who occupies a unique niche in the Atari World! Most Atari Dealers stick to just selling NEW, I also sell Used/2nd Hand Atari Goods! So not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you may not be able to find anymore at Swap Meets, Thrift Stores or even Auction Sites! And I sell for less! And unlike those who will remain anonymous! I test Goods before I sell them. So not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, partly because I'm the guy most people come to when they want to give their Ataris a New Home! I'm saving Orphaned Atari's from Oblivion! Goto http://BensCatalogs.Atari.org or Call (503)256-9974! I'm not asking a lot, I'm just trying to make a living and I'd like to earn your Business!

Why should you try Bravo Sierra Computers? Maybe you should ask Why Not? Those telling you Not to buy have there own prejudice to deal with. I can only speak for myself. Why Buy from BSC? Good Service! I earn your Atari Business one Customer at a time! Many Customers refer me to friends. Good Support! I'm in this for the long haul. Should you need Atari Help, I held teaching positions in my local Atari Clubs. You can call me or I'll call you for Atari Phone Support. I'm a good teacher, and I dont speak over my students heads! I prefer to keep it simple when necessary. Atari Sales! I have a lot of Atari I can sell you! Games/ Software, Hardware, Books and Accessories.Rather than print up a Catalog, thereby making it out of Date! I regularly update my Catalogs, for you to Download or view online at:

I was planning on doing something with the clones (especially the
Spectrum ones) as I did with the "Attack of the Clones" articles I
penned for Micro Mart a couple of years ago.

What I'm specifically looking for is building on the original machine;
modding and/or upgrading.

A few people have been in touch - thanks to those!

Shaun.

Is that 'mod' ..... drop the computer on the desk from 3 feet up?
Jim's computer isn't exactly a stock 130XE. I've wondered about the power
use in large RAM mods.

1996. Atari 8-bit CD collection $5 special (28-31 May)

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-28 08:23:49 UTC
From: dgs@clara.net
Message-ID: <3568e886.0405280023.6d603782@posting.google.com>
Source record: 15803

Hello All,

From 28-31 May, we are repeating our offer of our Atari 8-bit CD-ROM commercial software collection for an amazing US$5 including shipping!

This CD includes most of our commercial software products on a CD-ROM. All software is in both ATR and DCM format, with original manuals in PDF format. They can be run in 8-bit emulators, or copied over to disks for running on the Atari (extra hardware/software required for this).

Your $5 (ï¿½2.75 for UK buyers) will get you full versions of the Quick programming language (with support disks), SAM 80-col desktop system (with utility disks), Digi-Studio digitized music package, Print-Filer print image utility, 26 issues of our old magazine, a selection of PD disks from our
library, a 22 minute video (in MPEG1 format) of the AMS96 show held in the UK, 4 commercial games, an advanced character set editor utility, and more!

You can buy a copy right now using any credit/debit card (through PayPal), from our web site (full product details are there too): http://www.dgs.clara.net

at I'm no expert in any way, so this is why I've posted
> this thread. Basically, I'm thinking along the lines of what computer
> you have, who you are, how you have modded/upgraded it and what it can
> now do etc...

I did not upgraded my old 8 bit computers...
But what I really need it integrate them to modern reality, to easy
share information from old computer to any modern, and backwards...

As far as I remember it was Kernigan, who told "computer is a net".
So, I don't really need disk drive, I don't really need bluetooth for
my Oric (Pravetz) or Mikrosha, or Spectrum (Magic).
I need no hardware.
I need software, modern software for old machine.
The only hardware thing I really need is network adapter, but it is
useless without software.

Best regards.

hello larry,
how about reading some good old books by Edgar Allan Poe then ?!? afaik
one of his writings deals with the mystery of encryption (but I do not
remember its title right now - since I have the german version of it,
titled "Geheim-Schreiben" in one book and "Geheimschrift" in another
one)... I think the story of the "Gold Bug" also featured some secret
code and its decryption within the story (but I might be wrong here, it
is a long time since I last read EAP)...

ask the brits for the enigma decoding - they did that some 60+ years ago
(maybe our stupid german submarines still use that encryption, har har).
And I guess that an Atari 8Bit from 1979 and later also has the power to
do so... greetings, Andreas.

Well,
I have them in my PD collection, as well as hints, tips and tricks for
AR (but they are mostly written in german language). One utility is
called "DUNCHAR.COM", the Dungeon character editor, but I don`t remember
the name of the other utility right now. Anyway, if you are interested
in a copy, just e-mail me... -Andreas.

Just wondering if anyone might know what would cause the dreaded 'green screen' on an Atari 800xl? System powers up and the screen display is green - nothing else. Is there a common problem that can cause this? Also, is there an easy way to check or verify the problem? Ram is socketed.

Thanks for any help you can offer.

check to see if all chips are seated properly on the board. If they
are it sounds like a memory problem, so start there.

hope this helps

Thanks Kevin.
I'll give the memory chips a try. I've re-seated most of the chips on the board with no results. Do you know if the memory can be checked chip-by-chip (i.e. pull each chip one-at-a-time until the bad one is removed) or do they all have to be on the board (fully populated) to work? Also, where can I get the new memory chips from?
I guess I could ask one more question here. I had planned on doing some mods to this particular system including the memory modification. My question at this point would be - what is the best memory mod that I can do. I do realize though that I should get the system running before I sink anything into mods.

I bought the Wizztronics upgrade for my 800xl from Best Electronics:
http://www.best-electronics-ca.com
It was quite simple to install. Since I have this guy installed, I can
probably spare my original memory chips. If you're interested, drop me a
line.

Not a memory problem after all. I swapped chips with a known good system
until the good one exhibited the same behavior. Turns out it is the CPU.
I'll have to order one after the weekend.

I have been "reading up" on video displays, and I still can find no reason that the XEP80 should overscan so badly. Perhaps someone can shed some light on this? And perhaps they can correct any false notions that I currently have.

And of course, it overscans both vertically and horizontally -- although not always both on all displays. Most of the displays that I have used recently can get the entire width of the display, but cannot get the full height. In the past, most had trouble with the width, too -- progress, I guess. ;-)

According to the XEP docs, each character is contained in a 7 wide X 10 High cell which includes the "white space" between characters. With 25 lines of text, that's 250 lines. Interlaced wouldn't that translate to 500 lines, which is 25 less than the NTSC spec., but 20 more than the "safe" 480 typically used? I can see where "line doublers" would have a problem with the 25th line, but not the 24th -- but they do.

And the characters are sooo tall! If you look at the characters, there is no obvious reason why Atari should not have used a 7 X 9 or even 6 X 8 matrix. Yet there must be some reasons that "it is what it is." PAL and SECAM displays have more vertical lines. Is overscan an issue with those displays, also? Even if the (ROM) character set were changed, then the driver would have to be changed, wouldn't it? If the operating frequencies of the XEP were revised, then the driver would still have to be changed. "Catch 22."

I am getting a new video "gizmo" for my TV system -- it is a video scaler that should de-interlace the display and convert it to progressive scan. I'm skeptical, (but hopeful) that it works.

Congrats. Swapping chips is almost the only way I ever repaired a A-8. I
did somehow find a bad multiple resistor in a 800 once.
I have tried using a logic probe, but not much success doing that.
I would compare probe signals with a known good computer.

2017. How to create a boot-menu?

Newsgroup: comp.sys.atari.8bit
Date: 2004-05-30 21:57:57 UTC
From: jack <abc@def.it>
Message-ID: <1slkb0d895vgjbfh1vp2dcc1c26j703ssa@4ax.com>
Source record: 15824

Hi everybody,

I just started using my sio2pc cable and enjoyed the feeling of the
good old atari boot-sound. :-)

I'm going to create a (virtual) hard disk, where I'll put all of my
favourite *.exe and *.com files. I'd like to create a start-up menu
for this disk, in order to avoid having to load the DOS, then having
to type L for load, then having to remember the filename. :-)

When I used to have a real 1050, I remember having special programs
who created a bootmenu by which I just had to type a key (0-9 and then
A-Z) to load a specific file.

Anyone has this software or knows where I can find it?

Thanks,
gianfranco

What are you using on the back end? At least with APE, all you have to do
is set the virtual disk to D1: and you automatically get an execution menu
for all the files in the directory.

Hi All...

From the pages of Antic magazine:

"But wait, there was still more. The disk also included a slick new enhancement of Biffdrop (Antic, December 1984) with moving obstacles that would look right at home in Blue Max 2001. We took this game down the hall to the Antic Catalog and now an APX Classics All-Casten Disk is in the works for the first quarter of '86.

"This new collection will feature a never-before published game plus enhanced versions of Antic's complete Casten game libarary-including Risky Rescue (April, 1984), Escape From Epsilon (June, 1984) and Advent X-5 (December 1984). By the way, if you've been trying to type in J.D.'s golden oldies, you'll find TYPO II line codes in the July, 1985 issue."

And...

"Readers of Antic can look forward to Casten's biggest opus yet, "Operation Omega," a super expansion of "Escape from Epsilon." When Casten finishes the game, it will be his first major machine language program and contain nearly 750 scrolling screens.

"Staring in Casten's last two action games is the dauntless Slyvester Biffdrop (not spelled Sylvester). Unfortunately when Antic published "Epsilon" the author didn't inform us that Sly is a duck, so we illustrated the program with an Indiana Jones type hero. In "Operation Omega" Sly will be joined by a flying rodent named Oswald Dipthello.

"What makes JD. Casten's games outstanding is their fast movement, smooth graphics and humorous plot backgrounds.

"Casten is also working on his second text adventure game. But be won't turn it in until he's satisfied that the new parser recognizes words more sophisticatedly than 'Advent X-5 " did."

Does anybody know where I could find this material?

I'm running the stuff now as it was originally published in Antic.... This sounds like there was some improvements and maybe even some other games.

I barely can see the cursor under the screen edge on a regularly
adjusted PAL monitor! It goes beyond any reasonable limits and I was
once told that it is the PAL monitor problem while it should stay within
the limits on a NTSC one...

Which Atari ? There are plenty of Atari machines. I suppose there's more
than one Oric too !

I have my Oric sitting on top of my Atari ST with both plugged into the same
monitor. It just needs a switch flipped to change from one to the other.

what exactly is an Oric? We didn't have them in United States. I
assume he is comparing it to the 8bit atari
(400,800,1200xl,600xl,800xl,130xe,800xe, XGS basically the same
computer in different packaging). Alot of people I knew when I was a
kid preferred the Apple II or Commodore 64 to the Atari's and while it
seems each system had its advantages you couldn't convince me then or
now that any of them is better than Atari.

They were going to be sold there but I'm not sure if the distribution deal
was made before Oric went bust.

Oric is a 6502 8-bit computer similar to the Spectrum.

Hi,

Graham Nelson has written a game that has an Enigma machine in one of
its puzzles.

The game is called Jigsaw. You can get it here:

http://www.wurb.com/if/game/117

The program is in the same format as the classic Infocom games. You
will need to find an interpreter for the file. I'm not sure if the
256 k z5 file will run on an 8-bit, though.... The interpreters have
been ported to just about everything, though....

The Oric-1 and Oric Atmos were cheap 6502-based microcomputers
manufactured in the UK starting in 1983.

In terms of ability, they were about equivalent to the ZX
Spectrum, or maybe halfway between the VIC-20 and C64. Expansion
port, printer port, cassette port, eight colours, good sound,
lousy video, 64 kB RAM, BASIC interpreter. No hardware sprites,
no joystick, no RS-232.

http://48katmos.freeuk.com/48katmos/whatisan.htm
http://48katmos.freeuk.com/48katmos/oric1.htm

They were very popular in France and in the UK (though soon
eclipsed by the Speccy there).

2035. Translating German Docs to English

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-01 03:09:05 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040531230905.08293.00000248@mb-m12.aol.com>
Source record: 15842

I have several German doc files to convert to English. While certainly not perfect, I can usually get pretty good/understandable results from Alta Vista (Babelfish). But I continually run into a problem with special characters (such as "umlats" -- sorry about the spelling guys!).

The Atari and even MS Word show a brace or some other character in place of the special character. Then Babelfish chokes on the bogus character in the middle of a German word. This causes me lots of grief!

Does anyone have a suggestion for a German text editor that runs under Windows XP that I can use to help my translations?

Thanks,
Larry

That doesn't sound like a machine that you'd ditch an atari for. Personally
speaking, I own a c64, 800xl and a spectrum and each of them have their good
points and bad point.

The original proposition was not meant to be plausible, it was
meant to offend. In other words, it was a troll.

Notepad does umlauts, at least it seems to for me. Try the special key
combinations:

u umlaut = Alt 129
o umlaut = Alt 148
capital u umlaut = Alt 154
capital o umlaut = Alt 148
double s = Alt 225

ï¿½, ï¿½, ï¿½, ï¿½, ï¿½

No wait, you want to go the other way don't you. I guess it depends on
your source. Are you handcopying paper manuals to a text editor? Then
maybe the above does help you. Need some more details.

Damn, I was late...

Anyway, is there something similar to the project64
<http://project64.c64.org/> for the Ataris? I would be glad to be able
to dig some Atari docs...

2042. atari++ 1.35 available

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-01 12:00:09 UTC
From: Thomas Richter <thor@cleopatra.math.tu-berlin.de>
Message-ID: <c9hr49$46o$1@mamenchi.zrz.TU-Berlin.DE>
Source record: 15749

Hi Folks,

a new version of the C++ based Atari 8 bit emulator is available for
download from its canonical location at:

http://www.math.tu-berlin.de/~thor/atari++

This release fixes mainly two major bugs (crashes in the audio emulation,
crashes in the file requester), fixes pokey 16 bit timers and antic
DLI timing. More precisely:

- Fixed a segfault in the file/directory requester due to a buffer overrun
when extracting the file or path-part of the selected path.
- Pokey emulation of the low-part of 16 bit counters was incorrect up to
this release. This fixes sound effects of various Basic type-in listings.
- Added finer Pokey volume control.
- Added emulation of Pokey nonlinearities.
- Antic DLI timing was partially incorrect, the DLI signal was generated
one cycle too late with DMA registers sampled too early. Users of earlier
releases should adjust their preferences and set the "BeforeDLIClocks" to
eleven (11) instead of twelve.
- Added emulation of Antic DLI behaviour if the CPU is stopped. ANTIC does
not generate an NMI signal immediately, but waits again for the next
possible NMI generation slot in its horizontal scanline.
- Fixed the behaviour of the backspace key/control code in the S: handler of
the built-in Os emulation. This fixes a couple of Basic games.
- Fixed a critical bug in the Pokey emulation that could have caused crashes
on startup due to non-initialized variables.

Additionally, a new release of the free Atari Os emulation ("os++")
is found on the same side.

Have fun,
Thomas

2043. oric better then atari

no chance, unless you've modified the oric from what i remember of it

it was basically a 6502 version of the speccy (or sinclair spectrum
for the benefit of our american cousins) i.e mostly tape driven, did
sport a disk drive but never saw it, it had preprogrammed sound
effects built in, it used the same AY-PSG thatr was used in the
speccy, ST and CPC

Graphics wise, even the msx/amstrad was better then the oric (but they
were z80) if you want a close comparison to the oric think about the
vic 20 or the orig. apple 2 (but without custom hardware (like the A8
had)

I seem to remember seeing a oric in a computer shop in the stevenage
town centre back in the back end of 82... certainly wasn't 83 (just
across the bridge from the station and the theatre/sports hall
complex- gordon craig i think it was called)

One can make an argument for the C64 since it has some bragging rights
over the Atari (and of course the Atari has it's own arguments as
well) but from what I read about the Oric it doesn't seem to measure
up to either system. That said, like all platforms I'm sure there are
some killer apps on the Oric or some games that are programmed
exceptionally well that push it beyond the specs in it's description.

There is a great deal of importance in the programming - do you remember some of the early C64 tapes ? I certainly do and can say for sure that you get better Oric software. Later C64 software is better though making use of the sprites, colours and sound.

The Atari has better graphics. I've got a 130XE and a 800 XL in the loft but still use the Orics. For me it's down to ease of use and at the time it had a lot to do with price. Oric was the first colour computer under £100. An Atari 400 only had 16K and was £160 whereas the 800 was £400 and still only 16K ?

Oric tried to market the Atmos against the C64 as under certain conditions the Oric had more memory available to the user.

The Oric was setup to be compatible with the 'internet' of the day - Prestel and BBS systems. Quite a decent machine for the money. A very different strategy of design to Atari who tried to produce very good game systems and were market leaders in many ways. Oric was never designed to compete in that way, but to just be an effective machine that would suit a number of uses.

Apart from the Oric my favourite is the Atari STe. If you compare that Atari to an Oric - no contest. Atari wins on every aspect. It even looks good unlike the ugly lump that was the 400.

dont talk trash about the 400!! Back when the 400 was released in like
79/80 it was the only computer we could afford. I loved that machine
(still have it in fact) and mine is even uglier than the standard
model with all available upgrades of that era installed (including the
B-KEY keyboard).

Like you say the early C64 games and some of the late 80's Atari 800
games were not programmed well and do not show off the systems
capabilities. By all rights the Apple IIe was the weakest color
computer (avail in the US) of the 80's but I remember there were games
I saw on that system that made me jealous.

2057. Ms. Pacman Face-Off

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-01 23:55:23 UTC
From: Daniel Miller <NOSPAMdaclmi@sisna.com>
Message-ID: <tb5qb0hscdghd7ao4fbh10vpc4naa552g1@4ax.com>
Source record: 15764

In the current issue of RetroGaming Times Monthly there's a head to head competition between various versions of Ms. Pacman. The Atari 8bit was evidently the pick of the author, but he hedged and called it a four-way tie for winner. Check it out:

http://my.stratos.net/~hewston95/RTM/RTM_Home.htm

Personally I find that the Atari 8bit versions of Pacman and Ms. Pacman are not that great. The movement is not smooth, if you look at it I think the ghosts and player move 2 pixels at a time as opposed to one. For some reasons the mazes feel small regardless of the size of the monitor. And the game control doesn't seem to handle so well.

The author sampled a lot more versions than I ever have, but the best home version of Ms. Pacman I have ever played is the Atari 2600 version, which is a true masterpiece given the limitations of the 2600. The play value is outstanding and it is smoother than the 8bit version. IMO it's the best cartridge ever published for the 2600.

I don't know, but looking at the list below posted by Mr. Lee, Glenn
has a lot more work if he wants it.

I would love to see some more 5200 games ported, maybe we could take
up a collection or something.

I agree. Even after all these years I still love the look of the 400 and
800, not to mention the capabilities.

You're right about the 8-bit version not being smooth movement. I've never tried the 2600 ms pacman. Maybe I'll get an emulator and see how good the conversion is.

I'm a big fan of Ms. Pac Man. There are some great looking versions
for the NES, Genesis and SNES, but for overall fun factor and
challenge I give the atari 8-bit version the thumbs up. I 100% agree
it is the best short of the arcade version. By the way interesting
bit of trivia: the 8bit version was programmed by the same person
who designed the arcade version, which was itself a hack of the
original pac man (ie. MS pac man at the arcade was just Pac man with
different roms).

Pac man for the 8-bit is not so good, although back when it came out
it was by far the best translation.

Source record: 15769

Well,
you are talking about the german "Umlaute", they are usually normal
letters with two points "at their head"; try to convert them into: ae,
oe and ue (for the sharp s, also known as sz here, simply use a double-s
/ ss). So, whenever you find a special character a (with two points)
convert it into ae, a special character o into oe and a special
character u into ue. This should work with most translators then...

And er, if the original texts are not too long, I can help you to
translate them (german-english, english-german; my french is to bad
nowadays)... greetings, Andreas.

P.S.: ä = german lower case special character "a" (try to replace it
with ae)
Ä = german upper case special character "A" (replace with Ae)
ö = german lower case special character "o" (replace with oe)
Ö = german upper case special character "O" (replace with Oe)
ü = german lower case special character "u" (replace with ue)
Ü = german upper case special character "U" (replace with Ue)
ß = german special character s or sz (exists only in lower case!
simply
replace with double-s / ss)

P.P.S.: Well, I guess the german special characters typed here may
appear in a strange/different form on your computer - but hopefully you
know what I mean...

No the 2600 is a great classic system and Ms Pac Man is an impressive game when you take into consideration the limitations of that system, but the Atari 8bit (ie this is another term used to describe the 400,800,600xl,800xl,1200xl,65xe,130xe, 800xe, and XEGS systems even though almost all of Atari's consoles (minus the jaguar) were 8bit) is to me the best home conversion I have played. Infact I rate it higher then the NES/GENESIS/SNES versions which look much better. I think part of the reason is the game has the same author as the arcade version.

I also mentioned the atari 800 pac man which is not that great, but at the time of it's release it was the best conversion available.

Ah, that was my mistake...I thought you were saying Atari 800 ms pac man
wasn't that great :)

You're right though, the original pacman wasn't that good on the 8-bit, but
I do like ms pacman on the Atari 8-bit. I played it first on my 800, now on
my XEGS.

I managed to find this guy in store who had some old atari and commodore 64 stuff!

Anyway I got myself a sealed new copy of Ultima 3 for the Atari ST, as well as new and still sealed Alternate Reality the City atari 8-bit version as well as The hitchhikers guide to the galaxy new still sealed for Atari 8-bit.

Now the deal he made with me was I was to pay the original sticker prices of what these software pieces sold for when they first came out and the price stickers were indeed on the wrappers. So I did!

heheh

Message-ID: <3Ruvc.893$z55.791@newssvr15.news.prodigy.com>
Source record: 15775

I'm the excited, new owner of an Atarimax Maxflash
1 mbit cart!
Now, I haven't the slightest idea how to use it, other than it comes right
up with Disk Wizard II when I plug it in and turn the computer on.
I had to have one, because .... uhm because it is neat.
I envisioned a 128k byte ramdisk, or something.
I delved into how to do stuff with it at atarimax website.
Looks like you have to use Perl and TASM to create programs to install on
the cart. There is one, I guess, Atari program, flash.com, that I guess you
use to burn with.
There are discussion groups at atarimax, but I don't seem to see any
'images' to write to the cart there.
Anyone with experience tell me some about it?
Regards,
Rambling Russg (new e-mail addy, my old web site is gone. remove MUNGE to
reply.)

Steve has written a perl script that creates a programming ATR for you.

>Anyone with experience tell me some about it?

There is a ton of ATR programming images on his Atarimax forums. You
probably have to register/sign-up for the forums to see them. There is a
1Mbit and 8Mbit section where lots and lots of images are posted.

Good luck!

I didn't see anything to download except the .zip that has flash.com and
some *.A65 and MAXFLASH.PL. I guess the *.PL file is the script that
creates a ATR.
I was looking for an .ATR to be able to see what's on the cart, how much
room it has. I have no idea what to do with a perl script. Is my computing
right? A 1 mbit cart has about 128k bytes?

1Mbit is 128KB. The EXE packer function of the perl script lets you know
how much each exe file takes up on your cart and how much room you have
left.

The instructions are fairly good about how to make an image with the perl
script, and you could always ask a question in the flashcart forums or
peruse the discussions that have already taken place.

> the limits on a NTSC one...

I don't know why, but I have the impression that the XEP80 creates the bigger picture. I have 3 of those puppies (ABBUC sells them very cheap. Check out their shop http://www.abbuc.de/shop/hardware.html (german, but you can look at the pictures. Woldwide price, including shipping and handling is 18 Euro's, which would be I guess 20 to 22 USDollars. The closer you are to Europe, the cheaper they get). The bigger picture has nothing to do with the size in bits of the characters and the tv standard.

What you have to do (I guess) is find the vertical height (and maybe horizontal width) adjust. Either inside (be carefull 25 kilovolt are bad for your health) or outside the case of the monitor. Tell us the brand and type of you monitor(s) and maybe one of the USA or Canadians can tell you where thesae knows/controls are.

Flash.com is an Atari program. I believe that it is used by the perl script
to program the cartridge. it is put in the directory like this:
D:\Perl\maxflash_pl\flash\flash.com
The script then uses it as part of the Atr writing sequence.
I wished I understood more. ....but...

Hi Mathy-

> What you have to do (I guess) is find the vertical height (and maybe horizontal width) adjust. Either inside (be carefull 25 kilovolt are bad for your health) or outside the case of the monitor. Tell us the brand and type of you monitor(s) and maybe one of the USA or Canadians can tell you where thesae knows/controls are. <

There's one issue -- I mainly use a VGA line doubler/scaler with a "flat panel" PC display. The adjustment would have to be made in the doubler, and they have no adjustments (just like the XEP has no adjustments).

Thanks for the link. I continue to collect info about this -- and someday I will find a fix or work-around.

Larry

>

I know how to find those. The problem is that:

a) there is barely enough range to make the picture fit on the screen

b) the monitor is to be used also for other signals (like the atari's
onboard video)

Unfortunately (barely) fitting the xep display makes the normal signal
picture look rather bad and messing with the srewdriver inside the
monitor on every switch is not what everybody likes. No, there are no
separate adjustments for the MONO and COMPOSITE inputs inside...

2078. Atari 8-bit weekend special: $1 software!

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-04 10:12:54 UTC
From: dgs@clara.net
Message-ID: <3568e886.0406040212.65397978@posting.google.com>

Hello All,

This weekend (4-7 June 2004) we are offering you the chance to buy
from our range of commercial Atari 8-bit software from just US$1 each.
This is a special offer on our 'products by e-mail' service. You will
be e-mailed the software in both ATR and DCM formats along with
manuals in text or PDF format (as a .ZIP file). This offer includes
the Quick Programming Language (with 2 support disks) for US$2.

All payments will be using PayPal (at no extra charge). A shopping
cart/checkout system is being used to make ordering easy.

For more info on the products, and to order, please visit our website
http://www.dgs.clara.net

STOP!!! Before going to Auction... Experience Sales, Service and Support! Listing Lower Prices with Dealership Standards! Selling Used & New Atari Hardware, Games/ Software, Books and Accessories! Atari 2600/ 7800 Games, Classic Atari 8 Bit and Atari ST Computers Plus Atari Jaguar Games and Consoles! Come for the Savings, stay for the Service! The Rainbow ends at Bravo Sierra Computers!!!

Hi, I'm Ben Smith, proprietor of Bravo Sierra Computers! I'm an Atari Dealer/Reseller who occupies a unique niche in the Atari World! Most Atari Dealers stick to just selling NEW, I also sell Used/2nd Hand Atari Goods! So not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you may not be able to find anymore at Swap Meets, Thrift Stores or even Auction Sites! And I sell for less! And unlike those who will remain anonymous! I test Goods before I sell them. So not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, partly because I'm the guy most people come to when they want to give their Ataris a New Home! I'm saving Orphaned Atari's from Oblivion! Goto http://BensCatalogs.Atari.org or Call (503)256-9974! I'm not asking a lot, I'm just trying to make a living and I'd like to earn your Business!

http://www.aracnet.com/~atari/shipping.htm How I can save you Money!
http://www.aracnet.com/~atari/whybuyben.htm Ben's References!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Hmmm,
maybe someone could write a nice A8 tool to copy/program/burn all stuff
you want (bootdisks, diskfiles) onto the 1Mbit / 128kbyte cartridge with
your Atari computer ...?!? Ok, that would require some extra RAM /
Ramdisk, but I guess it would be possible to burn the maxflash cart
without a PC... at least the 1 Mbit / 128kbyte version (not so sure
about the 8Mbit / 1 Mbyte version)... -Andreas.

The Oric probably has a low resolution colour map to offer colour in a high resolution graphics mode. If that is true, the Oric has at least one advantage over the Atari for background images in, for example, adventure games.

Also, I think I have read somewhere that the Oric can generate sound with various waveforms more suitable for music. Right or wrong?

Anders

2084. DOS 2.5 / 1050

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-04 20:04:31 UTC
From: Tim <tim@somewhere.com>
Message-ID: <edl1c0hsk1oi5vmalqv64qhhpfcs4gqoog@4ax.com>
Source record: 15790

Hi,
I've been thinking about the DOS 2.5 / 1050 enhanced density diskette format and came to realization that the VTOC is not big enough to support all of the sectors on the disk (26 * 40 = 1040 sectors, 1040 / 8 = 130 bytes in the VOTC. If I recall correctly, the VTOC starts at offset 10 in the sector so there's really only 118 bytes available (representing 944 sectors).
I assume that there must be another sector allocated to represent the entire disk.
So, I have been searching all of the great Atari reference material online but can not find anything about the VTOC in this case.
Any one know of a reference for this?

Thanks!

Tim K.

2085. ANNC: *FREE* real time chat to discuss atari 8 bit issues

ok, guys, i really did it this time. i was playing aroudn with adding stuff to my website(s) and created a realtime free chat room to discuss atari 8 bit related issues.

registration is *NOT* required but only if you want to reserve a username; usernames do *EXPIRE* after 31 days of non use while unregistered usernames expire after 8 minutes. it is powered by phpMyChat so I'm still working out the bugs.

http://www.rtdos.com/chat or

http://rtdos.com/chat

right now it should work but my webhosts server may be going down this weekend for maintenance (not sure when or for how long) this was more or less created as an experiment (see if it would benefit my websites) and what better group to test it out on than you guys. i hope to add this kind of chat room to my website for kids at http://www.villagecouncil.net but registration on *THAT* website *WOULD* be required (i believe that would be by law not sure but because it is a site for kids better be safe than sorry). other topics include:

Couldn't you use the cart as a "disk" for storage purposes? If you had
the program image on a disk, couldn't you make a program that read it
off that disk and put it into a position on the flash that was
precalculated via a text file or something?

Just a thought

If you mean putting a one disk ATR image on the MaxFlash cart, Steve's perl script does that already. If you mean using the cartridge as a disk that you can write to like a ramdisk, that hasn't been done yet. Steve hasn't released the code for flashing the cartridge as of yet and nobody has written any software to do that.

There is some code to handle multi-disk games but it isn't complete, but Steve did mention that he would work on it again when he gets time. That would be great, especially with a 8Mbit cartridge.

The oscillators of the 8912 produce square waves, period. The
only ways I can think of are hacks:

- You can get some sort of sawtooth and triangle by using a
repeating envelope and setting the envelope rate so high that
it's in the audio range, but then you can't control the volume
anymore and the limited precision of the envelope times could
be a problem for musical applications.

- Sampling. As above, the idea is to force the waveform to
something else than square by changing the volume. The
difference is that, instead of having it done by the envelope
generator, you do it "manually".

No, I mean pre-figuring out how to create the flash image for a
multi-game cart and then creating the multi-game cart one game at a time
if thats all you can fit on the floppy disk at a time.

I'm imagining you having a small stack of floppies and an atari with the
maxicart installed and the atari "knowing" via a program and a script or
text file to load programs off the disks (one or more at a time), and
ask the user to swap disks and hit return.

I'm thinking it would be more like an archiver type of setup, with the
user just inserting disks and the program pulling the specified files
off of the disks.

I would LOVE to do a program like that.

Tony

No reference per se, but the second VTOC sector for DOS 2.5's
enhanced density is to be found at sector 1024. For MyDOS it's
sector 358. I'm thinking sector 1023 is relevant because thats
the last sector that can be pointed to by the 'borrowed' bit
file number/next sector link system, such as to make sectors
above 1023 not usable for normal file access anyway. There was
a program for 2.5 enhanced disks that would catalog 'extra' info
for the disk there, kind of a description of each entry in the
directory if you wanted to bother to type that in. Only program
I ever heard of that 'knew' about or used the tail end of a
DOS 2.5 enhanced disk. We are only talking about 16 sectors that
are unusable here.

I would have thought that the manual for the 1050 that was also
a DOS 2.5 reference (red and white book, IIRC) would be THE
source for this kind of info, I assume you've already seen it?

Well, the Barbitoric does not have any sample player in it.

Will got better chances with the Quintessential demo:
http://www.defence-force.org/computing/oric/dbug/vip_4/index.htm

Dbug :)

>

The wave forms available are volume waveforms which can be used to make a
note sound a bit more like the note of an instrument i.e 'ping' instead of
'mmmmmmm'. (Similar to the BBC computer)

The sound used for each note is a square wave though.

The C64 offers different wave forms which gives different tonality to the
sounds which makes a huge difference.

Has anyone looked at this on an oscilloscope ? I think it is a triangle waveform as it seems to use a spike created by the envelope generator being turned on. The trouble is there is a gap until the next spike which gives a sort of partial waveform resulting in a slightly unpleasant tone.

I found it interesting that the notes you get are an inverted harmonic series.

I haven't looked at it but I've listened to it. It sounds like a
loud buzz, similar to what comes out of a substractive synthesis
synth with the filter wide open.

From what I know of the 8912, the waveform is not a sawtooth or
triangle in that the "slope" of the waveform is an exponential
curve, not a straight line. The spectrum of that pseudo-sawtooth
must be different from that of a true sawtooth (a = 1/f) but it
does have even harmonics, and that's the point (a square wave
only has odd harmonics).

> I found it interesting that the notes you get are an inverted harmonic

Which is also true of the regular oscillators, by the way.

Maybe, perhaps, we can schedule weekly real time live chats; a schedule
agreed upon by the consensus of the group; or just pop in and out of the
chat rooms whenever ? What do you think ? What would you like to see to
make it work ?

The Oric was a good computer, but not better than the Atari
computers. Graphics were not that great on the Oric, but they were
good enough to get by with. The sound was ok. Of course this is
just my opinion....

2097. AtariWin 3.1 network feature using Kaillera.

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-05 23:53:53 UTC
From: "Z.Beeblebrox" <the.z.guy@comcast.net>
Message-ID: <YbCdnaA4D9mPwF_dRVn_iw@comcast.com>
Source record: 15654

This feature uses Kaillera 9 client, by the way.

Somebody besides myself has to try this function of AtariWin 3.1 and let me know if they get this same error:

I receive the pop-up error, "The ROM is not available on your computer" when I try to join a game in waiting. Kaillera 9 is built into the AtariWin 3.1 emulator.

I'm doing this on my own home LAN between my 2 networked computers.

Both have the identical files - including the ROM it insists I don't have.

Any ideas? Does it want the ROM to be in a specific directory? I tried it in a bunch of places in any case.

From my 2nd PC I can see the game I want running, so I click JOIN then I get that pop-up error I mentioned. I'm positive I have everything I need on both PCs.

So I'm stumped. Thanks for any input! I took a screenshot of the error and saved it as a JPEG if anybody is interested.

-regards,
Z

> Why inverted ?

For the same reason. In the 8912, the oscillators are "tuned"
just like the envelope generator is, by specifying the period as
a multiple of a certain time constant (16 ï¿½s, as I recall).

Therefore their frequency is constrained to (1 / (n * 0.000016))
where n is an integer. In terms of notes, the high end would be
like C3 D3 F3 Ab3 C4 F4 C5 C6. I suppose this is what you meant
by "inverted harmonic series" ?

Of the double-sided drives for Atari, what were the different schemes to access side 2?

XF551 -- Outside to inside tracks on side one, then inside to outside on side 2?

Percom -- Outside to inside tracks, alternating to both sides? (T1-S1, T1-S2...)

Floppy Board -- Same as XF551?

ATR 8000 -- Same as Percom?

Trak? Astra? How about the European-released drives?

Were there other formats/methods?

Larry

2105. AtariWin 3.1 Plus - network play worked.

Date: 2004-06-07 14:19:08 UTC
From: the.z.guy@comcast.net
Message-ID: <ec1749c9.0406070619.1b709714@posting.google.com>
Source record: 15661

hey all -

I finally got the networking feature to work -sort of- on my
AtariWin3.1 program. I did start and join a game.

The only problem I experience now is that the program tells me that
both users are trying to use the same joystick/port. I don't know why
it says that!

Computer #1 uses its usb gamepad and I set AtariWin to use stick port
1.

Computer #2 uses the keypad and I set AtariWin to use stick port 2.

So what's the conflict?

-yoink,
me

> Thanks for any help you can offer.

This may be a bit late, but before powering that thing up again, check the voltage coming out of the power supply. ANYTHING other than 5vdc(4.8 to 5.2) means the supply is gone, and if the voltage is high, at least one or more of the custom chips in the XL as well (usually the MMU is the first to go). Even if you DO get 5vdc, check the AC voltage (known as ripple) coming out of the supply. Any more than .1 volt will also cause problems.

Hope this helps.

Looking at the FAQ section where it would be nice for this information to be presented clearly :), namely 3.5) or http://www.faqs.org/faqs/atari-8-bit/faq/section-21.html , I would say that all the double-sided drives should use the same scheme as what Percom originally established, the exception being the XFD601B and XFD602B which someone once reported to me as being compatable with the XF551's method of double-sided operation. That's what "XFF551 compat" is supposed to mean where those two drives are mentioned in the FAQ.

Come to think of it, I thought the Percom "standard" was the opposite of the XF551: outside to inside on side 1, then outside to inside on side 2.

Any more enlightened contributions would be great! Then we can get the FAQ clarified on this.

There's an active general forum for vintage computing at
www.vintage-computer.com/vcforum. The boards are pretty lively with topics
related to Apples, Ataris, Commodores, CP/M and S-100 machines, DEC gear,
Tandy and more.

More visitors are always welcome!

| hey all -
|
| I finally got the networking feature to work -sort of- on my
| AtariWin3.1 program. I did start and join a game.
|
| The only problem I experience now is that the program tells me that
| both users are trying to use the same joystick/port. I don't know why
| it says that!
|
| Computer #1 uses its usb gamepad and I set AtariWin to use stick port
| 1.
|
| Computer #2 uses the keypad and I set AtariWin to use stick port 2.
|
| So what's the conflict?
|
| -yoink,
| me

Hi Z.B
Which two player game are you trying to play. The rom may not know how to switch player in some games. And expects that both joystick are attached to both networked stations. Try having identical emulated or other wise joystick configured the same on each Network station.
This is just a guess, I have tried several times also, and the closest I got was with Atari Invaders with two joysticks configured on each connection. My daughter was using the second joystick port on her computer and I was using the first joystick port. Tedious and difficult at best.
Try some of the new multiplayer games created for group gaming..
Good Luck
RoyE

2113. "Unverified" Atari vendors in Germany: H.A.P.S., Hofacker

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-08 14:54:15 UTC
From: Michael Current <hunmanik@earthlink.net>
Message-ID: <r5kbc0dlpb5oo1vhqlr56jgkekm33i6pbv@4ax.com>
Source record: 15670

I'm in the home stretch of weeding out obsolete information from the vendors/developers list.

The following are the only two German Atari vendors in my list that I am unable to verify the status of myself. Unless someone knows personally of their status, I need someone in Germany to try writing to these two addresses to find out if they are still there.

If they do still exist, updated contact info and especially a web site address would be ideal. No response should mean they no longer support the 8-bit Atari.

H.A.P.S. UNVERIFIED
c/o Bodo Juerss
Amandastr. 50
D-20357 Hamburg
Germany
Vendor: PD/freeware/shareware (>1000 disks available)

HOFACKER UNVERIFIED
Tegernseestr. 18
D-(8150) Holzkirchen
Germany [this zip code is old; need new zip code]
Vendor/Developer:
A-Text wordprocessor, ATMAS-II Macro-Assembler, ATMAS-Toolbox, Books...

Thanks for your help!

I'm in the home stretch of weeding out obsolete information from the vendors/developers list.

The following are the three Atari vendors in Peru in my list that I am unable to verify the status of myself. Unless someone knows personally of their status, I need someone in Peru, or at least in South America, to try writing to these 3 addresses to find out if they are still there. If you're really enthused you could try the phone numbers, but I find phone numbers to be even less likely to still work than postal addresses.

If they do still exist, updated contact info and especially a web site address would be ideal. No response should mean they no longer support the 8-bit Atari.

Altronic E.I.R.L. UNVERIFIED
Bolognesi 952
Bellavista
Callao 2

Well, I've seen the guy on occasion (more on that a little later); while it's
certain he still deals on Amiga hardware and software, I'm not sure about Atari.
I might ask next time.

Publicaciones Creativas is still in business, though things have been a bit
rough to them lately. They had been publishing a magazine about Manga & Anime
(see http://www.sugoi.com.pe/), but currently the issues publishing dates have
become erratic. Lots of back issues from Informï¿½tica Creativa in storage,
though, if anyone's interested. I go over there a couple of times a week to do

maintenance to their hardware, and that's where I've met the guy from Altronic (curiously enough, up to last year I'd never actually met him in person, only spoken to him over the phone).

Excellent! If he still deals with Atari I hope you can verify the contact
info, and see if he has a web page. If I don't hear back from you, or anyone
else, I'll eventually delete the entry.

Well, they sure don't make their contact info easy to find on that web site,
but at least they have one. Do I have the contact info right?

Can you detail what issues are available? I, for one, might be interested in
adding to my Atari magazine collection.

I wish something would happen to make their stored back issues/disks more
available. Maybe they could be encouraged to put up a web page describing
their availability, or maybe, if they really don't care, you'd be willing to
take them off their hands and try selling them off to us yourself? Just some
thoughts.

I'm using the 5V output of a PC power supply for my 130XE. It seems to have caused zero problems over the years, and I really enjoy not having to use an extra power brick (the PC is also the disk drive and the monitor, basically no Atari-specific hardware other than the XE and sio2pc cable, but I digress).

Anyway, is this stupid?

Hi

Just one simple question? If you are a real atari 8bit freak, wouldn't it be atari-heaven for you, if you could write these kind of postings on a BBS, running on REAL atari 8bit equipment?

I would say YES of course. I have been running BBS the atari Inside for a few months now on the internet, and the interest is only 2 callers a day or less.

I was wondering: why don't you writers in comp.sys.atari.8bit write some of their messages on a REAL atari 8bit bbs, running on 100% atari, without emulators or PC help?

Please take a look at it.

If the bbs is not gaining interest, I'll pull the plug. It is really wasting of energy running the bbs for almost no-body.

Thanks,
Marius

I enjoyed bbs's for years back in the 80's and even early 90's but the
popularity/convience of the internet has made them obsolete. I'm
sorry to say you will never be able to maintain a decent following.
That said, I did log onto your bbs a while ago just to see what it was
like and it is cool that you have an 8-bit on the net... Someone had a
800 hooked up to an ethernet card and it was serving web pages a
couple years ago (I think poor Colleen got slashdotted in about .005
seconds though) unfortunately it was taken off line.

Cross-posted to: comp.sys.apple2,comp.sys.atari.8bit,comp.sys.cbm,comp.sys.sinclair,comp.sys.tandy,comp.sys.ti

yes, i am cross posting this to multiple comp.sys.* groups but let me finsih before you flame me (sheesh):

i've searched and googled and searched but can't find any decent boot up or start up screenshots of the various classics that look good as (800*600) or (1024*768) wallpaper (even some 640*480 would do) but most are thumbnails (320*200) or smaller and don't look good as stretched wallpaper. Alta Vista which has the best wallpaper search (IMHO) and couldn't find anything there either that pertained to the classics (except boot screens for ms dos, ms windows, etc.but not the classics). i've come across multiple sites with screen shots of games and apps and stuff but no screen shots of boot screens or startup screens that would make good wallpaper (too small or too blurry).

can anyone help ? (please share your links here as others may be interested)

...interestingly enough i've come across several screen savers but no boot up or start up screen shots.

This may sound silly, but since the native resolution of a lot of
8-bit machines was 320x200 or less, surely you'd be hard pressed to
get screenshots at anything above. Unless they've been stretched and
anti-aliased or whatnot?

Like I said I think it's cool that an 8bit computer is doing anything
productive in 2004, but I disagree with your statement above. It may
seem "real" to you, but when I logged onto your bbs I was still using
a Windows XP telnet window on this side, it wasnt the same. When I
think of Atari bbs's (and I go back to the days of Amis and FoReM) I
think of the blocky atari font, "<press return for atascii/ascii>" the
way the cursor slides across the screen in 300 or 1200 baud. The
sound I heard through the speaker as the text printed on the screen (a
faint sound like fanning a deck of cards) the cursor flying around
like crazy as it draws atascii animations and graphics. Well, you get
the idea, in fact I think if there were some way I could use an
emulator to log on to your bbs it would feel much more real to me.

Just my two cents.

How about running an emulator and producing your own boot-up wallpapers?!?

As for the resolution, there's not much you can do about that except use
a graphics program to resize it for you, with some sort of image
enhancement/processing. But then again - isn't the idea of a classic to
look chunky?!?

why not run the emulator in the resolution you want the boot screen
and do a screen capture. problem solved everyones happy, if only real
life could be this easy!

The trick is to add scan-lines to the emulated image. In photoshop (or whatever) just make a layer with alternating black and clear horizontal lines at 1 pixel high. Plop that on top of your normal sized screen shot and then scale it up. If you resize to a full multiple of the original size (in pixels) and use "nearest neighbor" sizing (ie: not anti-aliased) the result will be just lovely

Source record: 15689

You know, Marius, I've been guilty of something I never admired during
the BBS days. I've been logging on and, seeing no messages, just
logged off.

I wish I could think of something provocative to post, but then again,
with the other callers gone, how would I know if it was being read?

The BBS via Telnet was great when it started out. There was one
caller named Bob who kind of kept things going. Once he disappeared,
things quieted down.

But to all potential callers, I must say this: Marius has done a very
good job with this BBS. Sure, it's not the latest technology. It's
not even as convenient as posting in a newsgroup. But there are
online games, a very obvious lack of spam and trolling, and the
potential for some great conversation.

Please give it (and the other Telnet BBSs) a try? I'm getting
lonesome :-(

Take care.

Alan

> =======____/=======

the way i fake scanlines is, i take an image ive made with alternating
horizontal lines (large enough to cover the surface of the image i want to
create scanlines for, and of any colour *except* any colour (an exact
colour) that is in the image) and at the edge the lines i have a slightly
thicker vertical line. i place this over the image and then use a fill tool
and fill the vertical line with white and then you have a sliced image. i
take that and darken or lighten it. then i place that over the original
image at the right spot. sounds like alot of work though i dont like
photoshop at all and i'm used to doing things this way since i never had any
big-time image manipulation programs. it's easier than it seems.

anyway you don't need to have scanlines, unless it's your preference. if you
want to imitate a TV screen sure otherwise there are no scanlines.

i agree with those that said to make your own. you can just snapshot a boot screen from an emulator.

someone suggested snapshotting with the emulator in full screen mode. this is okay though it doesn't always work. with some emulators you can't use the normal Print Screen to take a shot in full screen mode and other times you may take a shot in full screen only to find your image is much smaller at its real resolution (this happens often when using MS-DOS emulators)

you'll need to resize these yourself.

if you want to keep the ratio correct you should have this option in your paint package hopefully. you should do a regular resize and nothing with anti-aliasing,etc. in paint shop pro i think "resample" smooths out the edges and what not, and "resize" does just that. i think Resize is what you want to do.

i dont know what you want these for though if it's for your desktop you could skip all the resizing and check the option to Stretch, if you use Windows, if you're fine with that. i guess other OSs have a similar option. I also run Amiga OS3.9 and i know that one does.

STOP!!! Before going to Auction... Experience Sales, Service and Support! Listing Lower Prices with Dealership Standards! Selling Used & New Atari Hardware, Games/ Software, Books and Accessories! Atari 2600/ 7800 Games, Classic Atari 8 Bit and Atari ST Computers Plus Atari Jaguar Games and Consoles! Come for the Savings, stay for the Service! The Rainbow ends at Bravo Sierra Computers!!!

Hi, I'm Ben Smith, proprietor of Bravo Sierra Computers! I'm an Atari Dealer/Reseller who occupies a unique niche in the Atari World! Most Atari Dealers stick to just selling NEW, I also sell Used/2nd Hand Atari Goods! So not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you may not be able to find anymore at Swap Meets, Thrift Stores or even Auction Sites! And I sell for less! And unlike those who will remain anonymous! I test Goods before I sell them. So not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, partly because I'm the guy most people come to when they want to give their Ataris a New Home! I'm saving Orphaned Atari's from Oblivion! Goto http://BensCatalogs.Atari.org or Call (503)256-9974! I'm not asking a lot, I'm just trying to make a living and I'd like to earn your Business!

http://www.aracnet.com/~atari/shipping.htm How I can save you Money!
http://www.aracnet.com/~atari/whybuyben.htm Ben's References!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

I've made couple of boot screens from Atari XL, C64, ZX Spectrum 48 &
128, TI 99/4, MSX, CPC and a few others. As was said native
resolutions range from 256x192 to 320x200. It's up on you to resize
those pictures or add some photoshop magic to it. Just click here,
choose your preferred platfrom and first screenshots you'll see are
boot screens:

http://emul8.xlabs.sk/emulators/index.html [click for specific
platform]

One place you may want to look at is alt.binaries.pictures.wallpaper.
These people are usually quite helpful (if a little busy). If there is
nothing there which immediately strikes your fancy you can always post a
request. In general it is always best to keep the request simple. You can
limit it to three points: 1) Subject matter/genre, 2) Resolution, and 3)
Pixel depth. If they have anything handy they'll post it.

Later

2142. AtariSIO 0.30-pre1 released

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-10 16:48:13 UTC
From: Matthias Reichl <usenet-200406@hias.horus.com>
Message-ID: <slrncch46d.1jt.usenet-200406@camel.hias.horus.com>
Source record: 15699

New features in AtariSIO 0.30-pre1 are:

- atariserver now comes with a completely new curses frontend
- the kernel driver is compatible with 2.6.x kernels
- added preliminary support for the ATP format
- lots of other smaller fixes and improvements

AtariSIO can be downloaded from my homepage:

http://www.horus.com/~hias/atari/

so long,

Hias

RoyE -

I was able to get past the error, but as you were saying, there are other glitches. I'm interested in running M.U.L.E. with the network feature.
I had PC#1 using port 1, set to my usb joystick. I had PC#2 using port 2, set to just keypad. BUT I found out that my joystick on PC#1 was controlling BOTH player 1 and player 2 in MULE.

You would think that SOMEBODY (i.e. one of the emulator programmers)could have a setting that would just take joystick input over the network for player #2. If these guys can write an emulator, they can probably redirect the stick#2 input and tell it to use the internet as a source.

If I were a programmer anymore, I'd do it myself!

bleat,
z.b.

Looks like the kind of thing that has been done before:

"You see a path to the east and dense foliage to the north. There is a
gnarled oak with low hanging branches here.

CLIMB TREE

You scamper up into the branches. There is a large bird nest here.

LOOK NORTH

To the north you see a vast canyon."

Pretty mundane, but I suppose there is nothing wrong with porting it.

2149. "Red Label" AtariWriter

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-11 02:54:22 UTC
From: llppwhite@aol.comnsp

Source record: 15706

I ran across something new (to me). I recently purchased several AtariWriter carts. These are new (boxed) and have Red print on Silver labels rather than Yellow on Brown -or- Black on Silver labels. Did Atari perhaps try to differentiate their productivity software with a different label color. Or perhaps it's just because Atari had plenty of "red ink"? ;-)

Cool. Any new features in the kernel interface I need to adapt
atari++ for or may I leave the code in its current state?

So long,
Thomas

The kernel interface is still the same, only lots of code inside
the driver has changed.

I just ran a quick test with your latest CVS snapshot (1.35) and
it seemed to work quite fine, except for a strange error:

When I try to enter the menu after atari++ has booted via
atarisio, I get the following error message and I'm unable to
go to the menu:

Failure: Inappropriate ioctl for device:
unable to set the state of the COMMAND line

This error also occurs when atarisio is activated, but no disk
drive is connected.

so long,

Hias

Those are repackaged to conform to the new XE computers. The 130XE box is red and white just like your boxed AW.

2157. Reading the Percom block

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-11 21:25:50 UTC
From: Music Shop Landgraaf <landgraaf.musicshop@hccnet.nl>
Message-ID: <40ca2361$0$4177$3a628fcd@reader1.nntp.hccnet.nl>
Source record: 15714

Howdy folks

I'm trying to read the Percom block with the following piece of code. Most of it I borrowed from "Talking to the drive" by Phil Cardwell from New Atari User, issue 46. Except for the 5 byte user subroutine, that one I borrowed from "Mapping the Atari, revised edition".

Could somebody please explain to me what the five byte user subroutine does and why I have to press BREAK when using my XF551, but not when I use it on my harddrive or RAMdisk (because of the US+ OS by CSS, the RAMdisk - 65XE turned to 130XE - looks like a normal drive to 99.99% of the software)?

Phil Cardwell's routine uses a user subroutine - in the form of a string of characters - looks like this (when converted back to numbers):

104, 32, 89, 228, 173, 3, 3, 133, 212, 169, 0, 133, 213, 96

The code I borrowed from "Mapping..." looks like this when translated:

104, 32, 83, 228, 96

What's the difference between the two and which one should I use?

CU Mathy van Nisselroy

PS this is what the utilty looks like right now. It'll be integrated into other software I hope to write.

```
10 REM ** PERCOM READER TRY OUT **
20 REM
100 DIM DRIVENUMBER$(3),PERCOM$(12)
110 DIM ACCESS$(5)
120 ACCESS$="h S`"
Line 120 is corrupted. Should be CHR$(x) where x=(104, 32, 83, 228, 96)
130 DRIVENUMBER$="D :"

>
> 104, 32, 83, 228, 96
>
> What's the difference between the two and which one should I use?

The first block is:

```
PLA
JSR $E459
LDA $0303
STA $D4
LDA #$00
STA $D5
RTS
```

The second is

```
PLA
JSR $E459
RTS
```

They are the same, one just copies the status from $303 to $D4 before returning
so it
becomes the result of the USR call. For example if you do X=USR(address) then with
the first one the disk status is returned in X. In the second you have to PEEK
$303
after making the call to get the status.

Marius,

I understand your pain. When I was running the JYBOLAC:TNG BBS on my 8bit, I had a great time... until the software started locking up everyday, hardware problems, and of course the waning interest. Some of the lack of interest can be attributed to the BBS problems, but there is the fact that there is just not as much interest as there once was.

I spent many hours modifying Carina and writing PERL scripts to mantain the BBS on Linux, but eventually I took the BBS offline. Sorry.

I am not sure what you can add to the BBS to make it so more people will log in.... people want nostalgia but also something new.... maybe some new BBS games?

I already took it down this night.

I can use the equipment for nicer tasks. I'm working on some tools and musix. It's much nicer to use the 8bit in stead of having the bbs online, and no body loggin on to it :))

Again, I would like to say thanks to Alan Sharkis, Cabell Clarke, STEPHEN J CARDEN (!!) and a few other people for their support.

2163. Atari 8-bit Weekend Special: Atari SCART cable GBP3.99 DELIVERED!

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-12 13:32:07 UTC
From: Dean Garraghty <dgs@clara.net>
Message-ID: <1087047132.61045.0@iris.uk.clara.net>
Source record: 15720

Hello All,

For this weekend (12-14 June 2004), we are offering a limited quantity of Atari 8-bit to SCART 1.5m cables at the amazing price of just GBP3.99 including delivery to the UK! This offer is open to Europe also (but NOT France because this is a PAL cable), where the cost is GBP4.70 including delivery!

For more info on the benefits of using this cable, and to order now using a credit/debit card (with PayPal), please visit our website: http://www.dgs.clara.net

Dean Garraghty

No confirmation yet, but he probably still can be counted as "repair shop" for
any Ataris that may be around...
Phone and address are the same (though he's considering moving, the neighborhood
has become very dangerous over the last decade, apparently).

Time to check that wonderful resource again, Bill Wilkinson's "INSIGHT: Atari" column in COMPUTE!:

"Atari Disk Drive Compatibility"
October 1985, Issue 65, Vol. 7, No. 10
P.110

DATA lines contain the following values:

104, 32, 89, 228, 173, 3, 3, 133, 212, 169, 0, 133, 213, 96

The POKEing needed is about the same as in the listing you provide.
The DATA correspond to the proper way for accessing the SIO routines. As listed in the previous issue of COMPUTE!, it translates as:

```
*= anyplace
CALLSIO
PLA ;throw away count of arguments
JSR SIOV ;(at $E459)
LDA DSTATS ;SIO status (from DCB)
STA FR0 ;floating point register 0, $D4
LDA #0
STA FR0+1;(to get a two-byte value)
RTS ;back to BASIC caller
```

>Hello Marius,

I am sad to see your BBS go off line and thank you sincerely for your
time and effort to make and maintain it.

The A8 community is poorer with it's demise.

To echo Alan Sharkis,I am also guilty of lurking:

just logging on and NOT posting!

I guess we can only blame ourselves for your decision.The only excuse
that I can give for not posting,is that I am somewhat shy.
With the hope that you may reinstate your BBS,I promise to post more
often.if you put it back up.

Again,Thank you.

Ed

Howdy

I recently aquired an old vcs 2600 with everything except the power supply, a friend told me the voltage required is 9V but what is the polarity? Can i use a multi-voltage PSU? Where can i buy an original and how much do they go for?

thanks for any help

cheers

The tip on that power supply is positive. Any 9-volt PSU (including a
multi-voltage) with at least 500 mA output should do you just fine.

Well,
there is also another standard: the polish Karin Maxi drive (and afaik
also the IBM compatible drives) always read one sector of side one, then
one sector of side 2, then again a sectror from side one and a sector
from side two... Anyway, more info about this can be found in the doc.
to the program WriteATR by HiasSoft... -Andreas.

Hello Michael,
HAPS (Bodo Juerss) still exists, his adress is still valid. And he still
carries more than 1000 A8 PD disks. Hmmm, Hofacker also still exists,
but I have not found their new zip code yet - and most of all I am not
sure if they still sell their old Atari programs (like Atmas II and
such)... greetings, Andreas.

I used Delphi for about two years before I got an ISP that handled
tcp/ip. But, I don't remember what my ID was. With a version of Linux
available for most older computers such as TRS80, Commodor etc, there is
no need for the old type of ISP.

Considering the hardware requirements for a minimal Linux system that is
very unlikely. Even the embedded versions of Linux for really small
appliances (like uClinux) are way too demanding for the old 8-bitters. He
is probably talking about a Unix like OS for those computers. If TCP/IP
connectivity is what you are looking for for your favorite 8-bitter, take a
look at Contiki: http://www.sics.se/~adam/contiki/

I had a screen saver on my geocities website but lost it when i lost my account. am working on another one tho (hope to have wallpapers as well); i'd use screen shots from emulators (fuill screen without the windows borders) but....either i don't have....or...anyways, i should have something by the end of this week. i'll post it as soon as i have something...(these buggers are hard to find)

It's DC. Also, there are some buy-it-nows on eBay as low as $7.50 for a
NOS Atari unit.

I used GEnie and CompuServe for many many years ... starting around 1981
or so I think, with my Atari 8bit machines. As far as the chat areas go,
I was really bad at changing my nicks/handles - but they almost always
included the <qnr> part -- my primary nick for many years was "Coastie
<QNR>"

I was on Genie for years and had the same handle I do now, Gamer.
Yes, I would subscribe to something similar like Genie if there
were enough Atarians interested. It was fun and I enjoyed it much.
There was lot of information passed around and I love the
downloading of files. It is something I miss now along with a lot
of other things.

I know I would, but does anyone think that ppl would be willing to pay, say, $4.95 or $9.95 a month for text only internet access (like the good old days, except no hourly charges) ? it would have to be enough to cover at least costs without running into the red (at least break even)

or maybe basic text only html tags (meaning no GUI or audio / video) for use in a program like lynx (text only dos web browser but similiar idea for the classics) ?

how active do you think it would be or could be or should be to be justified ?

could this help bring people back into the fold ? (get more people involved in retro style computing) ?

dial up and / or internet access (meaning you can access it still from your old 8 bit comp or thru telnet or directly thru a webpage) ?

WOW I think my head just exploded.....(i wonder if we can make this work)

does anyone still have their delphi, genie, or compuserve manuals ? (just throwing out ideas and in return collecting ideas)

Considering that LD now is 5 cents to 0.5 cents / minutes, dial up might be
a go.

I held an account on Delphi, GEnie, Compuserve, Portal, American PeopleLink
(Plink), ProtoCall, Bix, and something in Massachusetts called ModemCity.

My first CIS ID was 72057,435 but I don't recall the second, later one.
Generally on most of the others I used 'cooky' as my user ID and / or nick
when possible. I don't recall that being the case on GEnie or ModemCity,
though.

I do recall being fascinated by archie and gopher when they were made
available through Delphi's 'Internet Portal' - and annoyed by CIS' 'stepped
speed' differentials: $6.00 / hour for 300 / 450 bps, $12.00 for 1200 and
$24.00 an hour for 2400 access.

It didn't keep me from using the faster speeds when I had the hardware,
though.

I think a non-GUI service would be useful, especially with many end-users
subscribing to broadband service.
Many folks run Telnet-based BBS systems from their home networks over cable
or DSL lines; a service geared to a larger audience could, I think, be
successful.

My first online experience was Compuserve. I spent very little time on it in
fact because it was my dads account he signed up for when he bought our
model 3. Back then online time in the evenings was around $10.00 an hour and
I remember our logon actually involved a mastercard number (my dads).
He actually kept the number taped to the modem for convenience 8-). It was
kind of hard for me to relax and enjoy the service knowing it was ringing up
a credit card bill that I would eventually be confronted with, but in
hindsight now I think I should've used it more than I did. After all we're
only kids once!
I do remember plunking around with the CB program (chat) and downloading a
space shuttle liftoff simulation to the daisy wheel printer. I also
downloaded a 3 foot ascii nude of Farah to the printer and I hung it on my
bedroom wall. My mom wasn't sure if she should compliment me on my computer
skills or if it should be thrown away and I should be grounded for a week.
```

As for Contiki, I've been the nay sayer on that for a while because in theory it's a good idea, but in reality it still involves expensive rs232-ethernet converters and from what I understand it uses all of the computers resources to the point that there's nothing left to do anything with (i.e. memory).
I still say that there should be a shell based subscription service offering dialup gateways to the net for vintage machines.
Rambling,
Mo

my thoughts exactly *BUT* the question remains, would it help bring people
back into the classic community (if not just for nostalgia reasons but
something actually useful) ? if needed, at least to break even, what about
other charges, say, to download files or play certain but not all online
games ? (just a thought, i remember delphi was gonna charge for that but
wen i quit delphi not sure what happened)

GEnie did have a GUI for the Commodore 64 and 128, it was called Wizard.
Output was still text based, and in reality, the gui send text based
shortcuts to the GEnie servers, but it was point and click.

CompuServe had a similar thing. It was a DOS based windowing environment
which supported mouse clicks and function keys.

What about this: http://www.hofacker.de which leads to
http://hofacker-de.clipshop.com/ ? Is this them?

Ok, maybe the address/phone/fax on this page are correct:
http://www.hmc-cp.de/wowi/wowi23.htm

Ing. W. Hofacker GmbH
Tegernseer Straï¿½e 18
83607 Holzkirchen
T: 08024 7331
F: 08024 7580

Same address is here:
http://www.be.schule.de/bics/cif/chemie/chemie/html/sonstiges.htm

Still, if no one wants to verify that they remember what an Atari is, they
need to be dropped from the list. Who's going to call or write?

Q-Link charged the basic rate for 1200 baud, but premium rate for 2400. When
I moved to GEnie, the basic rate there applied to 2400 baud, while 4800 was
premium.

You had 'compuserve' in the subject, and I remeber being on it
before it was called Compuserve. It was then called MicroNet.

When I joined there were about 3000 and it was only running after
6PM when H&R Block didn't need the computers.

You'd login at a prompt of a DEC-10 and type run mnet80 - to get
to the first SIG on MicroNet - written by Richard Taylor of TRS 80
Opera fame - in Fortran.

We had a TRS80 group that was moved over from the Source when the
totally crashed the Source trying to bring a second Prime computer
on line.

It was down totally for one day and when it came I've seen
computers that were turned off that were faster.

That was all email, sort of a predecesor to mailing lists, and
after the changeove sometimes we could wait 5 minutes for a
response to our commands.

My ID on MicroNet was 212,207214 [If I rememeber correctly]
and on The Source it was TCB777.

There were under 3000 users on either system when I first logged
onto them - late 1979 or early 1980 as I recall.

I still have the MicroNet manuals somewhere.

The other ones I found interesting were BIX - Byte Information
Exchange and ??? [My mind is GOING] the thing from CDC that was
used in education heavily.

Source was $2.00 over Tymnet. Compuserve was $7.00 per hour plus
$2.00 hour connect for locations not served by their pop.

The text only internets - actually links from Arapnet - were being
being handled by a LOT of uucp usenet nodes. I seem to remember ??
Rieger starting up one of the first pay ones on the West Coast and
I bought an 8 port serial board from him when he graduated out
of Intel based machines and went with Suns.

I never used BIX. Did use the Dow Jones Information Service for a while.
I believe that you might be thinking of "PLATO" as far as the CDC
offering goes.

In my opinion, to justify the above costs, it would have to be a
very good service, like Delphi or Genie in their heyday.

> or maybe basic text only html tags (meaning no GUI or audio / video) for use
> in a program like lynx (text only dos web browser but similiar idea for the

I use a system called CIX which is a UK based varient of BIX. You can access it via a web interface at www.cix.co.uk, using a PC OLR called Ameol or an Atari ST one called CIXComm/Read. You can also use telnet if you want a hard time. It's purely text based and has hundreds if not thousands of active conferences.

I think those services were better than the internet today, better for me
that is, because the general public and the advertisers and marketers
weren't there. We associated with others there with interests similar to
ours and those who didn't have the knowlege couldn't get in.

I'd love to be in that world again but the problem isn't that CIS doesn't
exist or that the text interface doesn't exist. The problem is that that
world no longer exists. Everybody can show up. It's just not the same.

Is that snobbish? Yeah, I guess it is in a way. But I suspect that most of
you who were there know what I mean.

2212. Is there a way to run PPP and perhaps a newsreader for 8bits?

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-15 22:59:04 UTC
From: John Miskinis <nospam@here.com>
Message-ID: <pan.2004.06.15.22.59.04.898397@here.com>
Source record: 15619

Hi,

I recently aquired an Atari 835 modem! And, as I was
out of state, and my high speed internet was out of reach,
I subscribed to earthlink dialup.

Does anyone know if a usable PPP client, and maybe a couple
other clients (newsreader, simple browser, etc.) exist?

Many thanks for any info, I'm not expecting high speed, just
a basic 300 baud, but usable "system".

I don't think any PPP for A8s. Also 300 baud will not even connect to shell accounts, etc. I believe that A8s might be able to do a dial-up at 4800 baud, using, say Ice-T, then if you had a shell account you could use a Linux/Unix news reader. This would be very unusual, ie. I'm pretty sure you can't do a shell dial-up.

I too understand. I have been running the BF2k+ on the net basically since 1999 - average 1 caller per day (thanks alan). That's another reason I use the emulator rather than my real 8-bit equipment - PC's are expendable - my 8-bit stuff is not - it's precious to me. If my BBS PC crashes, I have 5 more identical PC's waiting in line to be plugged up. Not so with my Atari 8-bit equipment.

Sorry to see you go down but I too feel your pain.

There's a little thread in alt.sys.pdp10 at the moment trying to
figure out how CIS did their setup. I imagine they were all KL10s by
that point. One machine with account info and then you were farmed to
different ones as you changed conferences? How were the disks shared?
There are theories that things like CB were done through the front
ends. Anybody know more?

You mention changing conferences. When I got on MicroNet there was
no changing conferences. There was the MNET-80 sig, which as I
recall we started by getting to the user prompt on a DEC-10 and
then typing 'run mnet80'. The ONLY other thing running on the
machine was a P-Code sharing group.

The nice thing was that it acted like Unix and if we wanted to
handle a file swap, we'd just upload it on our local link, and
chmod the permissions and tell whoever we wanted to have it where
it was and they would download it.

That mean all the calls were local. Otherwise we'd have to use
long distance for file-transfer.

About a year or so later the changed the name to Compuserve and
started going after commercial accounts. They took away
the shell login at that time, and put in a 4-hour delay on email.

The commercial accounts had their email tranmitted instantly and
the 4-hour delay on normal accounts was to force those who needed
fast email to pay the commercial rate.

>*WOW* Now that really is retro!!!

And I finally remember the program/service from CDC, also a pay by the hour service. That was Plato.

And keeping in line with the TRS80's here, on July 1, 1981, about 2 months before IBM annonced the PC I brought up the first 24x7 BBS in Orlando on a Model I with 3 floppy drives. It was a Connction 80 site/software.

A few months later I brought up the first TBBS running outside the Denver test area. The Model I ran 33,000 power-on hours before it became a blit flaky about no always doing software reboot.

Each time a connection was dropped the system would reboot and reload as that was the only way to ensure integrity of the program on the Model I.

In the 3 years [before I moved to a Max80 for the BBS] it answered over 65,000 phone calls. I averaged under 1 hour per day idle time all during that time - and often the idle time was under 1/2 hour.

No it's not snobbish. It's just that we got used to a very high
signal to noise ratio before the government turned the internet
loose. Many who used to love that mode continue on in mailing
lists - and I'm on at least 6 of them.

I also miss those days.

OK, so I guess the 835 is virtually useless, except for
a collector's item. A few years ago I did use an 850 and a
28.8K modem, to dialup to a "terminal server", and actually
used x/y/z modem (can't remember which) to transfer some
files.

Yes, I realize the 835 does not support tone dialing, it
only supports (good old) pulse dialing. This is not an issue
for me. :)

I have a 1030 also, but have not even seen if it still works.
If I can figure out how to "originate a connection", perhaps
I will try to link a couple 8bit systems over the (same) phone
line. I did this many years ago, but at that time I knew the
"dialback number" for our local phone service. So, at that
point I did not need to originate, as the phone would ring, and
I would turn on both modems. :)

I think I even have an old Anderson Jacobson accoustic coupler
around somewhere, and I think it may have an originate switch.

Oh yeh, I need to dig up the schematics for a "phone line
simulator", and see if I have enough parts to build one.

In any case, I hope my ramblings, have brought back some great
nostalgic memories for you. If not, please file in /dev/null

ahhahaha no way can you get on the internet with an 835 modem. do you
realise your modem does not even support touch tone dialing?
Seriously it is way too slow... If you had a P/R Connection (or
something similar) and a 14.4 modem, you might be able to find
someplace that offers a shell account at that speed (mind you the
modem would be connected at 14.4 the computer I believe is limited
9600 baud) hopefully the 8bit would not drop characters... I dont
think it is a realistic proposition.

You just need a shell account. Netmagic.net used to sell them for an
extra couple of bucks a month, I don't know if they still offer them.

Another alternative is to find a Waffle board or set one up. They are
like a BBS gateway to the internet. Useful for newsgroups and email.

[cix support]

About 2 years ago I had one guy with a commodore 64 call in one night when
i was on support. Using the comms module (OK, a terminal emulator) from
mini-office 2 and the commodore plug in modem. I think a few people still
power up their old kit and try to connect "for old times sake".

Howdy folks

Does anybody know if 2.88 meg floppy drives where ever supported by Atari 8 bit drives/upgrades (maybe the HDI by Erhard "Atreju" Puetz?)? And how it's configuration looks like? AS in how many tracks, how may sectors per track and what density the percom block tells us it has. The 1.44 meg drives on my FloppyBoard apparently have density "8", where normally you'ld find "0" for single and "4" for double density. On the other hand "bit 7: 40 track disk on 80 track drive" isn't shown as far as I can see.

BTW anybody know how a 1.2 meg floppy is configured? (you can use a 1.2 meg 5.25" high density floppy on the FloppyBoard for instance.)

$31 is, of course, the (AT)ASCII code for the character "1", which must
correspond to the number assigned to your drive.

Well, not exactly so. The $31 at $300 (768) is a code meaning "disk drive".
The actual unit number is stored at $301 (769).

I had accounts on Delphi, Genie, and Compuserve since the early 1980's.

A lot of files, message bases(Genie was the most complex), and chats. Really
loved the chats.

I liked Compuserve because it had access to lots of services such as online
stores, computrace, downloads, and some games.

I used Genie because a lot of Atarians used it for mail and chats. Dropped it
when they dissappeared.

I used Delphi because it was easy. Let me lynx, telnet, gopher, and ftp in and
out of systems around the world,
far easier than the others. I set my Mother up on it, she liked the really
easy access FAST text mail. She
complained for years when they dropped dial up because her XL couldn't get on
it anymore. I had to do it. Sigh.
Kept a chat room for a while when they changed. Dropped it all last year.

I still have my Compuserve account. Have to use it on CIS2000, so PC only,
sigh. But I like to visit some forums
and access newsgroups through them. So I have a valid email address that is
about 22 years old!
Probably not for long though.

Problem with access for 8 bit users is finding them. Most are not online now.
Those that are either know about
Atari places, or have no interest any more. Of the 1000+ Atari people I have
met and known of over the last 23 years,
only a couple are online that I have seen. But I don't have much contact with
them either. I have not seen the vast majority
of old members from Users groups post messages or visit chats(this is why they
died). Even the people I met online are going
elsewhere. Never do know why. They just dissappear. While Atari 8 bit access
is nice, the numbers that will actually use it
are counted on 2 hands. No matter the method.

How to get more together and why they leave are questions I had been trying to answer for many years. This is one of the reasons I do not spend time trying to get these things going now. I have spent too much in the past with little return. Too few people take adavantage of the rare opportunity to get together and do things when it happens. Fewer actually work to make it happen. People say they want it. I don't believe them anymore.

Rick D.

No one is because it's too lame and requires an expensive adapter. The
problem is not in the software, it's in the availability of low-priced easy
to access 300 baud dialups with shell access.

2239. XL Emulator for PC with integrated A.P.E or SIO2PC?

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-17 18:05:31 UTC
From: FBergemann@web.de
Message-ID: <95e97960.0406171005.4900776d@posting.google.com>
Source record: 15645

Hi,

i am looking for an ATARI 8Bit Emulator for PC, which has already
integrated A.P.E. (or something similar).
I.e. i want to connect the 1050 to the PC and the Emulator should be
able to access the original disks.
Is there such a solution?
So far i've only seen Emulators, which want to have disk images like
ATR.
And *separate* solutions to let PC serve as Atari peripheral HW (like
A.P.E.).
This means i would need to use by physical Atari XL to port my disks
to PC for backup (e.g.).
But with an integrated solution i could just attach my 1050 to the PC
and do the porting with the Emulator running on the PC.

Is there such a solution?

- Many thanks in advance!

Regards!
\Frank

>The actual unit number is stored at $301 (769).

Is it? Oh, right, I overlooked that part in the column on SIO from September
1985:

DCB Layout Table
Location
Hex Dec Name Size Purpose
300 768 DDEVIC 1 Name of the device on SIO bus (all disk drives
use "1", $21, as a name).
301 769 DUNIT 1 Unit number of device (to distinguish D1: from
D2:, for example).
302 770 DCOMND 1 Command, usually an ATASCII letter, such as "R"
for read sector (but "!" will format a disk!).
303 771 DSTATS 1 Direction control before call to SIO; status of
operation upon return.
304 772 DBUF 2 Address of buffer to read from or write to, as
appropriate.
306 774 DTIME 2 Timeout value. SIO waits this many seconds
before giving up.
308 776 DBYTE 2 Number of bytes to transfer (always 128 or 256
for disks).
30A 778 DAUX 2 Purpose varies; always sector number when used
with disks.

In fact, the listing in the original column I quoted from (October 1985) has a
line that reads

9200 POKE 768,ASC("1"):REM don't ask me why

> Is there such a solution?

For Linux: yes.

Atari++ has support for accessing Atari disk drives using my AtariSIO
kernel driver.

All you have to do is download AtariSIO from my homepage
http://www.horus.com/~hias/atari/ , compile and install it and then
compile Atari++. The configure script of Atari++ will automatically
detect the presence of AtariSIO and enable this additional feature.

Now you should be able to access any Atari disk drive using a
1050-2-PC or ProSystem cable.

I've tested it and, yes, it works!

so long,

Hias

I have been looking into the power supply section of a Percom AT88-SPD (Single drive, Printer port, Double density) in some detail. Hopefully some of you who are better versed in power supplies than I am can explain a few things.

The 110 hot lead goes to a fuse, and then both the hot and neutral are looped through a small ferrite ring. (RFI suppression or ?)

Then both are connected to a group of 3 quite large disc capacitors. These are marked ".01Z" and below that "Z5U". Then both leads go to the (very large!) transformer. What purpose do the caps serve and what are these markings? .01uF, .05uF, or?

The transformer has two outputs, both 7.5 VAC. These are 7.5V to ground and 15V between them. Then the outputs go to a full bridge rectifier and a single axial electrolytic cap -- 25V, 4700 uF. Presumably this is a ripple capacitor.

The DC output winds its way to two 7805 regulators and hidden down low, a 7812. But I can't see how the voltage gets doubled to about 19VDC going into the 7812?
Is there a fairly common voltage doubler IC that is likely being used?

Can anyone "illuminate" this PS section?

Thanks,
Larry

Hmmm,
I remember all this stuff, because I am currently creating two CD-ROMs
(or maybe one DVD?) filled with Public Domain Atari 8Bit stuff. My
harddisk has more than 1200 Megabytes of ATR images and other stuff -
and from time to time I have to take a look at all the images (with XDIR
by Bo and Ernest Schreurs), move some stuff into new subdirs or add some
stuff to existing dirs. If everything works as expected, the CD`s will
be ready in October (just before the ABBUC meeting) and believe it or
not, they will contain more ATR images (images only in ATR format!) than
the Pooldisk Too by the Schreurs (therefore they will not contain any
GIF/JPG/... pictures or HTML stuff, like CD 2 of The Pooldisk CD`s did,
nor the ANG and Pokey stuff)...

In other words, my CD`s are a sort of addendum to the Pooldisk Too CD`s.
Besides, I like it most to help other Atarians, when they search
something (as long as it is PD/Freeware/Shareware), e-mail them "my"
stuff or give tips/hints where to find it... greetings, Andreas.

Well,
under Netscape I get errors (Netscape cannot find the given site). So I
will try it with MSE in a few minutes (after I have read all the news
here in comp.sys.atari.8bit)... greetings, Andreas.

2248. Re: Double Sided 5-1/4" Drive Variations

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-18 17:34:53 UTC
From: Andreas Magenheimer <magea000@students.uni-mainz.de>
Message-ID: <40D327BD.306F3212@students.uni-mainz.de>
Source record: 15455

Well,
the HDI by Erhard Puetz used the good old (ST) floppy controller called "Ajax", this one works with 16Mhz - that is required to drive high density. Now, a 2.88 Meg floppy would require a 32Mhz controller - and I guess that was / still is the problem. They are (maybe/maybe not) quite unusual and hard to find... -Andreas.

P.S.: Of course original ST`s worked only with 8 Mhz, so they used 360k (single-sided 3,5" / 80 Tracks) and 720k (double-sided 3,5" / 80 Tracks) floppies. But later the ST computers could easily be upgraded with that Ajax chip to support High Density (but nowadays even that Ajax chip is hard to find and quite expensive)...

2255. An Unusual Percom?

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-19 01:57:16 UTC
From: llppwhite@aol.comnsp
Message-ID: <20040618215716.23018.00000234@mb-m07.aol.com>
Source record: 15462

I couldn't resist ditching the old full-height MPI mechanism in my AT88, and replacing it with a used-but-good 1/2 height, 360K Tandon. After getting things back together, I started testing it. Formatted just fine in both single- and double-density. No surprise. Then I turned the disk over (not a "flippy"). To my surprise, it formatted side B perfectly in both densities with no timing hole!

Well, how about double-sided? Formats, reads, and writes perfectly as a DS disk, formatted from either side in single-density. Copied about 900 sectors worth of files to it, and then copied them to my Floppy Board 360K drive.

How about DS,DD? Nope. "Error 173" is returned each time from MyDos when I try to format in DS,DD. At this time, I have no clue... There is also another problem with DS operation. At 300 rpm, the drive "misses" a sector on about every third sector read or written and appears to have to wait until the sector comes back around. This is very pronounced in DS operation, and to a lesser extent, in SS, SD operation. In SS, DD operation, it doesn't noticably "miss". The interleve must be tailored for DD operation. (?) This really calls for some more investigation -- looking at the interleve.

I swapped disks and my FB drive read the Percom disk without incident, and vice-versa. Hmm -- what if I format a DS,DD disk on the FB and put it in the Percom? With the standard interleve, the Percom reads and writes fine to the *both* disk sides, and there is no problem with sector timing ("missing" sectors).
And my FB is set up in XF551 mode. No problem.

OK, how about if we change the FB format to make it Percom-compatible? The Percom again reads and writes this DD format just fine. And still no vestige of the timing issue.

One more trial -- let's format the disk on the FB in DS,SD. Not only does it read and write just fine, but it's a real "speed-demon". Not like Ultra-Speed, but clearly faster than a 1050.

So, looks like two conclusions for the AT88-SPD:
1) There is some type of issue in laying down a DS,DD format. Perhaps it's really a MyDos problem? I'll have to try the SDX cart and see how that goes.

2) When a disk is formatted on another drive, the Percom can read and write *perfectly* in SS, SD all the way to DS,DD. (OK, no 1050 density.)

-Larry

> .01uF, .05uF, or?

Those are line bypass capacitors for rfi filtering. These are so old you may
be better off removing them to protect against the case becoming hot if one
shorts out. I doubt they are required anyway.

The marking is probably .01uf. The Z is a tolerance and according to a
chart I looked up its +80%/-20%. I dont know enough about it to know if thats
actually correct in your case.

> The transformer has two outputs, both 7.5 VAC. These are 7.5V to ground and

>
> The DC output winds its way to two 7805 regulators and hidden down low, a 7812.
> But I can't see how the voltage gets doubled to about 19VDC going into the
> 7812?
> Is there a fairly common voltage doubler IC that is likely being used?

Are you going by the transformer marking or an actual measurement? The marking
(and possibly the measurement) is RMS. When that goes through the smoothing
capacitor you will measure close to the peak AC voltage, or 2 times that in
this case
because the inputs to the rectifier are the two 180 degree out of phase
secondary
outputs.

So ((7.5 * 2) * 1.414) = 21.2v unloaded DC. 19v sounds pretty normal with
losses and loading from the regulator.

Hi Matthias,

thanks for your help.
I'll have a look and download your stuff.
It is very interesting to me, because creating kernel drivers for
linux is also somthing, that i want to learn about.
But for now i will start with this Windows programs (A.P.E, etc) to
backup my XL disk first.
But i'll definitely work with your program a little bit later

- Many thanks again!

Regards!

2265. Info on Master 5S external 5.25" floppy drive

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-19 17:17:33 UTC
From: Damien Cymbal <d_cymbal@hotmail.com>
Message-ID: <My_Ac.141476$Ly.16772@attbi_s01>
Source record: 15472

Can anyone give me the lowdown on this drive? I came accross a drive and power adapter, but no docs. There are some dips on the back, one looks like you can make it do 40/80 track, the other makes it drive 0/1 (maybe)?

Any help appreciated.

Thanks.

2266. FA: Factory Seal Atari 7800 Games! Rare!

Hi,

Many thanks to all of you for your help.
I'll check for your hints and the other DOS' you recommended.

Regards!

Frank

My BBS handle was "The Grand Rascal", and I *DO* subscribe to a "non-GUI"
ISP, or more accurately an ISP that can handle non-GUI (it's a Unix dial-up
shell account), "Fox Valley Internet" by name. See them at "FVI.Net". :)

GMail, circa 1983 (a humorous story)

login: dv16vjax
password: abc123

Thanks for loggin onto GMail! As of 11/03/1983, we are still in Beta
Testing! But APRANet will soon be upgraded to a 16-bit internet, which
should happen around the middle of June 1985.

Gmail version 0.010 running on VAX VMS /66

Please send Electronic-Mail error reports to: Gmail!ucbvax.UUCP

Sorry, you have no new Electronic-Mail "dv16vjax!ucbvax.UUCP".

gmail

Welcome to GMail, the new Electronic-Mail service from Time Warner, Inc.,
a subsidiary of Atari, Inc.

****
* In the News! *
****

Coming Soon! Check your GMail on your Atari 2600 VCS! Requires a Star
Raiders(tm) (Model #: CX2660) Video Game Cartridge and Video Touch Pad
(Model #: CX21). Check your local Sears for details!

HitchHiker's Guide to the Galaxy! New from Infocom and Douglas Adams!
Reserve your copy today! For the Commodore 64, IBM PC/PC Jr., Atari
400/800, TRS-80 (Model 1-3) and Apple II/IIe (with at least 48K RAM).

2271. Re: "Unverified" Atari vendors in Germany: H.A.P.S., Hofacker

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-20 15:25:09 UTC
From: Michael Current <hunmanik@earthlink.net>
Message-ID: <jaabd01jeousqflee0uqhnvl2ibe517rgi@4ax.com>
Source record: 15478

Odd, the URLs I quoted still work for me.

This strange page http://hofacker-de.clipshop.com/ has no email address on it,
and in fact looks like a prototype, unfinished web site. But it does have
this postal address:

Elcomp Publishing, Inc. , 8780 19th Street #199, Alta Loma, CA 91701

Which I could write to myself I suppose, but it doesn't seem like the Hofacker
in Germany that we're looking for.

Now that we have a complete postal address, plus a phone number for Hofacker
in Germany, I still hope someone with German skills will call or write to ask
them if they still support Atari, and verify their contact info.

-Michael

Damien,

First you have posted this to the wrong newsgroup because the Master 5S is made for the Atari ST computer line. I have one of these things and I have the manual but I could never get it work. It wouldn't format any disk that I tried (dsdd or dshd). The drive inside the housing is a Teac FD-55GFR which is used as a 1.2meg drive on IBM systems. I've emailed you scans from the relevant pages from the very small manual. Good luck.

Ralph

That's very good! Exactly the way I remember it! Although I don't remember
being able to check email with star raiders. Hmmm....

I made too many. :)

So I've marked down 5 packs of 1mbit and 8mbit flash cartridge for today only.

http://www.atarimax.com/flashcart/documentation/

Steve

where can i find a *TABLE* or *CHART* that lists which machine or system
(PC, Console, or otherwise) had which CPU? So far this is what I have:

6502:
atari
apple
commodore
nintendo entertainment system

Z80
timex / sinclair
MSX ?
Vtech VZ200 / 300
Mattel Aquarius
Sega Master System

6809
Dragon
Tandy Color Computer

but I was wondering if there was a more complete *CHART* or *TABLE* where
all this informaiton can be looked up in one reference ?

...'cause this is how I am organizing my website (by CPU and then by
machine): http://www.rtdos.com

Yeah you really do need a chart!
I know this from my experience, the commodore 64 used a 6514, cousin of the 6502.
Not sure about the sega master system but I believe Sega was into cpu pairs like 6502 with a z80.
I think the Apple 2 series used a variant of the 6502 something like 65c02 or something like that.
The TRS-80 COCO used a motorola 6809.
Macs and Atari ST's used 68000
Next computers used 68040's
Tandy 1000's used 8086's
Altairs and IMSAI's could use multiple cpu cards (swapped)
z80,6502,8080,etc.

I'm sure others will add to this list.
Mo

The first NeXTs were 68030 - the 68040 was an optional upgrade to the cube
(which tbf nearly *every* cube owner took). The first prototype Mac board
had an MC6809.

Commodore VIC 20 had 6502, Commodore C-64 had 6510, Commodore C+4 - 7501
(IIRC). Both 6510 and 7501 are "cousins" of 6502.

> I think the Apple 2 series used a variant of the 6502 something like

Yes. And some model of Apple (Apple IIcx?) used 65c816 - or it was
upgradable to 65c816, I don't remember.

> I'm sure others will add to this list.

Acorn BBC machines - 6502 (with optional Z80).

that's the Apple IIgs you are thinking of the SNES also uses this
processor.

Also the 6509 was used in the Atari 2600

No the Sega Master System was Z80 based, however the Sege
Genesis/Megadrive had both a 68000 and Z80, which is probably what you
are thinking of.

The Atari 2600 uses the 6507 processor, not 6509.

Add to your Z80 list the Zenith, and most of the CP/M machines that were
popular in the 1970's.

Starting @ $10. Not exactly state of the art but they sure look nice next to
XE computers.

XMM801
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5103837249&ssPageName=STRK:MESE:IT

XDM121
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5103837908&ssPageName=STRK:MESE:IT

Some other Atari items, lots of disks, etc.

Hi,

> where can i download curcuit diagrams for the ATARI 800XL.

Well, I don't know whether you'll find these online somehwere,
but the diagrams are available in the appendix of the german
"Das Atari Profibuch", for example.

> Is it possible to also get diagrams for the internals of the
> non-standard chips inside the XL (Antic, Pokey)?

Yes, a while ago the diagrams have been scanned and put online
at the web sides of the Atari Historic Society, maybe they're still
there:

http://www.atarimuseum.com/mainmenu/mainmenu.html

So long,
Thomas

Sord M5 used Z80, as I think did the Newbrains

You also need to look at speed and processor variant as you already know the QL had a 68000 with a cut down bus, and the Sam had a faster Z80, I imagine.

The Memotech used a Z80 as well, by the way, coupled with a TI graphics chip.

Anyone recall which the Texas TI99/4a used?

Brian

Hi,

> I know this from my experience, the commodore 64 used a 6514, cousin of the
> 6502.

Actually, a 6510. The 6502 was designed by a couple of ex-motorola
engineers that run away from their company and formed Synertek
(sp?). This company was later bought by CBM, then called "Commodore
Semiconductor Group" where they manufactured the 6510, which is something like
a 6502 with a memory-mapped "PIA" at addresses 0 and 1. The Atari 8 bit
CPU is strightly speeking no 6502 either, but a small variant
("Sally") that comes with an additional "WAIT" line that stops the
CPU. This line is connected to the ANTIC DMA (and WSYNC) logic.

Other variants of the 6502 (the 6507, 6509 and more) just have less
address lines, but are otherwise identical internally. They're used in
the peripherals, for example in the 1050 disk drive.

The 65c02 was a variant of the 6502 with an extended instruction set which
was available as a third-party plug-in add-on. AFAIK it never really became
very popular, but it is supported by some third-party products, e.g. the
Mac/65 assembler.

> Macs and Atari ST's used 68000

To complete the list, the Amiga's came with 68000 CPUs, add-ons for all
other members of the family have been made available. (I've a 68030, 68040
and 68060 Amiga at home, though even 68020 CPU cards and 68010-plug in
replacements are available. The 8-bit bus variant 68008 was of course no
option)

So long,
Thomas

Then of course the early PowerPC chips also made appearances in third-party upgrades such as the Blizzard and WarpUP - I think everything from the 601 to the 604 was available. There were also some hackers who put some Alpha chip into the trapdoor of an Amiga - I can't remember the details beside the fact that I first heard about it in around 96 and thought "bugger me that's fast".

Me me me! Perhaps you could do a timeline of the micros, as well as which
ones were influenced by which and also show which CPUs were used.
Something along the lines of Eric Levenez' charts at www.levenez.com ?

The C128 uses a 8502 and a Z80.

The SNES uses a Nintendo-specific version of the 65C816. It has some small
extra's to help it's graphics engine.

> By the way, the Coco used the 6809E variant of the 6809

The Dragon used the 6809E, 68A09E and the 68AB09E. One of the differences
was that POKEing the speed-up hack was less likely to b0rk the processor
with the latter two.

The cut-down processor in the QL is a 68008. The TI99/4A used
TMS9900, which also has some "relatives" in other consoles or
computers.

Cosmac Elf, Comx 35, RCA Studio II etc used RCA (later CDP) 1802(A).

Yep, Newbrain used Z80.

> You also need to look at speed and processor variant as you already know
the
> QL had a 68000 with a cut down bus, and the Sam had a faster Z80, I
imagine.

The QL uses a 68008, which is a 68000 with an external databus of 8 bits,
which was 16 bits multiplexed.

> The Memotech used a Z80 as well, by the way, coupled with a TI graphics
> chip.

The MSX uses a Z80, also coupled with a TI graphics chip. And so does the
Sharp MZ800.

> Anyone recall which the Texas TI99/4a used?

TMS9900 processor. Really fast processor, but it had an ugly way of
adressing it's memory, so it sucked in real-time :).

>
> all the coco's or just cooc 3 ?

The difference is that the 6809 has an on-board oscillator, while the 6809E needs an external oscillator circuit. But I believe because of it, the 6809E could be manufactured with a different process, so it could run faster.

Or was it the other way round?

Rough estimation of CPUs used is shown here on my page:
http://emul8.xlabs.sk/emulators/

some CPUs should be stated as 65xx instead of 6502 and so on.

No, it wasn't Synertek but MOS Technology, hence Commodore chips before 1989
were
stamped with "MOS". Synertek was a 2nd source for the 6502 CPU.

Most schematics of the 800XL I found online are either not correct or
complete, but the schematic in "Das Atari Profibuch" is fine.

Last time I checked the SIO specs were gone, but these info is
still available: Use xlsearch (www.newbreedsoftware.com/xlsearch)
to search for ANTIC.PDF, GTIA.PDF and POKEY.PDF.

so long,

Hias

>
Download MESS - http://www.mess.org/ start the GUI and double-click on
the CPU icon on the left. It will show you different processors.
Everytime you click on a CPU the machines which use this CPU will show
on the right. Cool, eh?
For example:
I8048 - Adventurevision, Odyssey 2.
HD6309 - Cool Computer 3.
APEXC - APEXC (as described in 1957).

That is worrying.
Perhaps we should get together to produce a carefully checked version?

> >> Is it possible to also get diagrams for the internals of the
> >> non-standard chips inside the XL (Antic, Pokey)?
> >
> > Yes, a while ago the diagrams have been scanned and put online
> > at the web sites of the Atari Historic Society, maybe they're still
> > there:

The data sheets for the custom chips were huge pdf files at the AHS
but they are available in html at:
http://www.howell1964.freeserve.co.uk/Atari/800XL/Atari_800XL.htm

The internal circuit diagrams in the AHS are so poor resolution they are
almost useless.
I asked AHS for higher-resolution scans of those particular pages
but have had no response...

K.

I always thought that was legened until I read that you could do the same
with a particular CBM (or PET not sure which model) and if you left it in
turbo state too long it would actually fry the system.

I remember.. I was the Atari8bit SysOp on Delphi for a while there.. under the handle of "Kamaro Kid", if I recall. Man, was that a long time ago!

No, I wouldnt subscribe to a non-GUI ISP.. although my current ISP was selected because they do provide Solaris/linux shell access (currently using "tin" to read newsgroups)

2315. Programming examples for the Atari VCS

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-21 16:04:19 UTC
From: zoid999@excite.com
Message-ID: <26278ab4.0406210804.8cfdcb9@posting.google.com>
Source record: 15572

Greetings fellow Atari-geeks,

For months I've been searching for some descent programming examples
and documentation reguarding this matter but found nothing of the sort.
Although I've maintained the "Stella programmer's manual", it doesn't
really help cosidering the lack of 6502 code to show working examples.

Any guidence of wisdom finding good documentation for the VCS is appreciated

Thanks in advance :)

That was some early Pets that you could fry the chip on. I often wondered
about those go faster stripes, I thought maybe a heatsink might save it?

And:
Tandy TRS-80 Models 1,3 and 4
Tatung Einstein
Sharp MZ-80

And to the 6502:
Acorn (Atom and BBC)
Ohio Scientific (Superboard and Challenger)
Oric

Also:

8080:
Various mostly CP/M machines like MSI

8085:
Panasonic
Rair Black Box

TMS-9900(?):
Texas Instruments TI-99

And of course there were other processors like the RCA 1802 and the SC/MP
which were used in a few machines...

You're missing the Acorn Atom and BBC model A and B+ (6502), and the BBC
Master and Master Compact (6512).

And the Spectrum +2A. ;-)

Hi,

here is the phone and fax number of hofacker I found in the german phonebook:
Hofacker Winfried (0 80 24) 73 31
Fax (0 80 24) 75 80
Holzkirchen

Maybe someone calls him up and asks if they still support Atari 8Bits.

Frank

Thomas Richter <thor@cleopatra.math.tu-berlin.de> did eloquently scribble:
> To complete the list, the Amiga's came with 68000 CPUs, add-ons for all
> other members of the family have been made available. (I've a 68030, 68040
> and 68060 Amiga at home, though even 68020 CPU cards and 68010-plug in
> replacements are available. The 8-bit bus variant 68008 was of course no
> option)

If you want to complete the list, the least you could do is mention the Gold Card, Super Gold Card, Q40 and Q60.

Gold card was a memory/floppy/rom expansion with a full 68000 to allow it to use the 2 Meg RAM it had onboard.

The SuperGold card was a 68010 with 4 Meg RAM

The Q40 and Q60 are new QL compatible motherboards with... surprisingly enough, a 68040 and the 68060.

2327. *FOUOND* cpu list - site is in french but is it complete ?

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-22 04:55:11 UTC
From: *ProteanThread* <"os65000 at yahoo dot com">
Message-ID: <BOidnQ3ftO4zJkrdRVn-vA@bresnan.com>
Source record: 15582
Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm,comp.sys.sinclair,comp.sys.tandy,comp.sys.ti

i think this list is about as complete as one can get:

http://mo5.com/MHI/micros.php

obviously where it says " Microprocesseur" just type in z80, 6502, 6809,
6803, etc.

so far it's works for nearly every processor that I've typed:

Z80
6502
6809
6803
6510
8502 - not listed (assuming Commodore machines only)
8510 - not listed (assuming Commodore machines only)
65816
6507 - listed with 6502
6509
8080
8085
9900 - not listed (assuming ti only)

this site is in french but it does list machine, mfctr, specific cpu, and
year of introduction.

any hear of a "TV Boy" seems to be an atari 2600 clone

now to my *BIG* question: did i *MISS* any "relevant" CPU's other than
intel 80x86 or did i get them all ?

Hi,

> where can i download curcuit diagrams for the ATARI 800XL.

you can find the XL schematics at

http://www-user.tu-chemnitz.de/~sgl/atari/

> Is it possible to also get diagrams for the internals of the
> non-standard chips inside the XL (Antic, Pokey)?

I think http://www.atarimuseum.com/ has some info about it.

Cheers,

Andrï¿½

7501 ;)

If you need pictures for your site(?)/list I can provide some, I have
several, not only C= computers!

Brian

2331. Re: Is there a way to run PPP and perhaps a newsreader for 8bits?

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-22 15:06:26 UTC
From: Marius Diepenhorst <grover25@zonnet.nl>
Message-ID: <cb9i57$mk7$1@reader11.wxs.nl>
Source record: 15586

On my atari 8bit I have the fantastic Black Box. This interface has a 19k2 hardware flow control RS232 port. At 19200 baud nothing like garbage! 100% error free at 19k2.

Using the SIO2PC cable you can use the sio port at 19200 baud, without any errors.

The atari can do such high baud rates without any trouble.

By the way with a lantronix RS232 -> lan adapter you are really able to connect the internet. Next thing is to find an e-mail service that supports telnet etc.

Greetz.

I haven't seen the Fairchild F8<?> processor. It made it into at least
one video game system, Channel F, and I thought at least a few other
applications.

2333. REVERSE Engineer Old ATARI 7800

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-22 16:05:36 UTC
From: BILL HOULEHAN <boshea@earthlink.net>
Message-ID: <10dgm7c2pktue68@corp.supernews.com>
Source record: 15589

We need an Inventor/Engineer who has the ability to recreate in a new simple system the 7800 console!

O'Shea, Ltd. is located in Kansas City, MO since 1975. We own 1 million Atari game cartridges from the late 70's. Many of you know that the Atari 7800 uses 8-Bit graphics. We are looking for someone to remake and simplify the 7800 inner workings of the consoles i.e.board, chips, wire layout, and anything else that might be needed.

The units need to be able to plug into TV or computer, have a cartridge slot, and be able to use 2 joysticks. We are looking for a easier way to manufacture the system. Our plan is to manufacture 200,000 of these units and kit them each with 5 of our Atari Cartridges & market them at retail throughout the US.

If you have the engineering background and ability to reverse engineer the old 7800 console and
are able to design this unit please contact us.

Thanks,
Brian Raynor

That's a pretty tall ask - a generic CPU simulator/emulator. On the hardware
side, you'll find in-circuit emultors (ICE's) for all sorts of CPUs, but
they're all for a specific CPU.

What exactly do you want to do?

You can single-step on the debug build of (x)mess - and setup any
environment you wish to emulate. Of course, there's no source-level debugging.

Regards,

As Long as we are being highly specific here, the TRS-80 model 1 had a Z80,
the model 3/4's had Z80A's
Of course I'm sure someone will have something to add to this.

Message-ID: <c860ca33.0406221845.6626df8c@posting.google.com>
Source record: 15502

Hi

Looking at the picture of the circuit board sold at SIO2PC.COM,
I see a diode:

http://www.sio2pc.com/images/sio2pc_l.jpg

Where should this diode be connected to?

I made my version of the 1 Chip SIO2PC cable, and I think
adding a diode would be a cool enhancement.

Regards

Hi

That's the exact 1 Chip SIO2PC I made, and I used
one of those diodes with a band mark on it.

In my previous post I made a mistake, I was really
talking about the LED shown in the pictures at SIO2PC.COM.

Where should this LED be connected to? What are the specs for that LED?

Well, hotmail, that means you can only have 1 MB in your inbox?
With my 4 mpixel camera it would be full pretty soon ;)

Sure, I can cut and resize, but there is nothing I hate more than pictures
so small that you cannot really see what is on them anyway!

I have a homepage with plenty of space, so I might aswell upload them
there...

Brian

Given that anyone has access to all these game roms on the internet I can't
see any reason why someone would pay so much for it.

His cartridge wasn't mass produced in some third world country. It's
called supply and demand...since you seem to know so much about this
5200 cart, please give all of us some detailsl on where we can find
them for $30.

George

The multicart came from Steve Tucker, one of the sellers of the 8bit flash carts, those are priced a little more affordably, then program your own games to them. Sunmark.com also sells 8bit multicarts, they are in the $30-50 mark, but of course none have 128 games, more like 15-30 games each.

Mr. Lee's price is the going rate for what he's offering, 5200 multicarts do cost that much. It's unfortunate but they do..

Complete? Far from it.

Some reasons why are at <URL:http://www.nostalgia8.nl/banks/machinelst.htm>.

(Incidentally, much of this machine is, I'm almost certain, at least nine
years old...)

actually there were only a limited amount of these cartridges made.
They are no longer in prod and 140 is pretty much the going price on
EBAY. I think you should take the time to know what you are talking
about before you insult people.

If I had the knowledge to make these multicarts I would sell them for $50 each and sell 100X the amount than the 'other' guy.

It can't cost 'that' much to make one. Also its just ethics also... making items like these affordable gives you that cushy feeling that you are supporting the scene rather than 'cashing in' on it.

I don't recall paying $140 for the Supercharger CD-Rom when it was being promoted in this group long while back and that was an awesome addition to my collection.

Just my .2 but I wouldn't mind owning that 5200 cart :D

You need to know the facts Mr!

The only person insulting here is the seller: Lee.

Go back and read the whole thread.

And if that is the going rate for a 5200 multicart, then maybe one should
think about getting a Atari 800 and a 8MBit cart and make your own 128 game
cart. You'll save over $100 too...

$100 + for a home made 5200 cart is insane. Now if it was a Bounty Bob cart
that would be another story.

Tim

ugh like I said get the facts THEN type your innane posts. These are
not "homemade" per se. There was a limited run of these carts and
that is the going rate for them... look on EBAY or Atariage if you
care to learn the truth.

Heya there, chump. FYI, you're the one advertising this to us. We're not ASKING you to supply us with these multicarts, rather you're forcing them down the throats of an uninterested audience.

Pick you fights better, because you can't win an arguement with your prospective customers.

Truth be told I was thinking of getting on until I saw his attitude.

I looked at it and thought of it myself and was looking forward to an
intelligent response from him for the price but then I see the way he
replies to conflicting opinions and decided that I won't be doing business
with someone like that, and furthere more I'm glad I didn't act on my
immediate impulse and give him my CC# before I saw his other posts that are
just insulting to his potential audience.

Thanks,
Shawn

You are correct. It isn't THAT complicated to make a menued multicart.
It takes 2 chips and some ROMs to do it. Last one I designed contains a
74374 octal latch, GAL16V8, and a couple 1Mbyte EPROMs. Throw in a PCB
and a cart for the case and a label, and you're talking around $20-$25 in
materials.

Charging 5x or more of the materials cost on what is essentially a PIRATE
product is a bit steep indeedy. So is making a "limited number" (quote-
unquote) to artificially raise the price. You gotta buy a large run of
PCBs anyways... usually 250 pcs costs the same or LESS than 100 so I
don't really buy it when I hear of "limited quantities" of carts like
this. You know in 6 months, another "limited run" will be released onto
ebay or the newsgroup.

STOP!!! Before going to Auction... Experience Sales, Service and Support! Listing Lower Prices with Dealership Standards! Selling Used & New Atari Hardware, Games/ Software, Books and Accessories! Atari 2600/ 7800 Games, Classic Atari 8 Bit and Atari ST Computers Plus Atari Jaguar Games and Consoles! Come for the Savings, stay for the Service! The Rainbow ends at Bravo Sierra Computers!!!

Hi, I'm Ben Smith, proprietor of Bravo Sierra Computers! I'm an Atari Dealer/Reseller who occupies a unique niche in the Atari World! Most Atari Dealers stick to just selling NEW, I also sell Used/2nd Hand Atari Goods! So not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you may not be able to find anymore at Swap Meets, Thrift Stores or even Auction Sites! And I sell for less! And unlike those who will remain anonymous! I test Goods before I sell them. So not only can I sell you some Great New stuff! But I can sell you hard to find 2nd Hand Goods, partly because I'm the guy most people come to when they want to give their Ataris a New Home! I'm saving Orphaned Atari's from Oblivion! Goto http://BensCatalogs.Atari.org or Call (503)256-9974! I'm not asking a lot, I'm just trying to make a living and I'd like to earn your Business!

http://www.aracnet.com/~atari/shipping.htm How I can save you Money!
http://www.aracnet.com/~atari/whybuyben.htm Ben's References!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari Jaguar, 8 Bit and ST Games/Software, Hardware/Accessories & References/ Books. FREE Catalogs on Ben's Domain at http://BensCatalogs.Atari.org or at http://BenSells.Atari.org Catalogs can be attached to,Requested by & Received Through E-Mail at Atari@aracnet.com or BenSells@Atari.org and Please Specify Atari 8 Bit, ST, Jaguar and/or all 3! I'm currently beta testing a 2600 multicart. It will sell for $45 and
contain 1 MB worth of roms.

I'm getting ready to start on the next project, either Coleco or NES
probably haven't decided yet.

Well,
and one of the fist 68000 CPU`s was afaik used in the TI 99/4A, a 68009 if I remember correctly (or was it something totally different?). Ok, I never owned a TI, so I can only recall what I read in some magazines... -andreas.

P.S.: My old chesscomputer by hegener & glaser also used a 6xxx CPU (a 6500Y or 6800Y, where Y meant Yamaha; it had 16kbytes ROM and 256 Bytes RAM)...

I'm afraid you are wrong on this one. The TI 99/4A uses a TMS 9900 CPU.

No, it used a TMS-9900 CPU.
TI's own design. 16-bit internal, 8-bit external.
http://www.netten.net/~garycox/ti99idx.htm

The Atari 2600 used a 6507 CPU.
It is just a 6502 chip in a 28-pin package.

No the TMS9900 is 16bit internally and externally. The TI-99/4(A) did a
double byte fetch to use external 8 bit RAM using external hardware that
added wait states so both fetches could be done.

That's the funny thing. It should ALWAYS be $31. Otherwise you don't get
al the data.

Howdy folks

My Percom Block Reader/Writer (PBRW) is ready (I expect no major changes in the future. Only cosmetic changes might still be needed.).

It's written in TurboBASIC.

If somebody wants it, feel free to ask.

CU Mathy van Nisselroy

PS if you only have unmodified 810's and/or unmodified 1050's don't bother. PBRW will tell you that an error occured in these cases. Harddisks and FloppyBoard floppy's do have Percom Blocks. Atleast on the BlackBox.

If you have enough room, you might consider putting them on the CD-ROM as
files. That way, my CD Data Reader can copy them straits to disk and maybe
later they can be loaded directly from CD ROM. CD Data Reader isn't
finished yet, but I can look at directories and look at sectors.

He might have been thinking of the TMS9995, which is also 16-bit externally
and internally, but only exposes eight data pins (muxing them to get the
full 16-bit word). The 9900 in the 99/4(A) is sort of that way, but only as
a consequence of that specific model's engineering, and not because it can't
run sixteen data lines.

Not the CPU, the console yes. The CPU was full 16 bit.

True. The TI-99/4 (and A model too) used a full 16-bit internal and external CPU. Only 256 bytes (yes, bytes, not K!) were on the 16-bit bus, though. The 16K advertised was actually in the address space of the VDP, not the CPU and was only 8-bit.

What does this tell us? Even the 8086 (16/16 bit) was before the 8088
(16/8), so it seems to me to be the same thing. Nevertheless, the 8086
was already ununsed in the early days because of its high costs.

Regards,
Spiro.

2400. 8-bit Atari set-up for sale - enthusiasts shouldn't miss this!!!

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-26 19:53:54 UTC
From: David Kinston <not@really.org>
Message-ID: <40ddd41e$0$24750$5a62ac22@per-qv1-newsreader-01.iinet.net.au>
Source record: 15407

I'm sadly selling my Atari system, as we simply don't have the
space to keep it any longer. Ebay auction ends July 1.

http://cgi.ebay.com.au/ws/eBayISAPI.dll?ViewItem&category=1247&item=5104550509&rd=1

The system includes:
Complete XE system (console, keyboard, cable. power supply)
1050 disk drive
multiple joysticks, some unused
all transformers and cables
Centronics paralell printer cable
MAJOR collection of games, languages, utilities etc on diskette (includes
lots and lots of games!).
Manuals and books in good condition (de re Atari, programming, etc).
Dedicated TV-style monitor which can be connected to a video, too.

I'm located in Melbourne, Australia.
Willing to ship anywhere, at buyer's expense.
(The monitor may be difficult to send overseas)

I want this much-loved system to be inherited by someone who
will value and use it as we did!!

Questions via ebay email, not via this NG.

Cheers

David Kinston

Don't forget about the (c)opyrights on the OS in the 7800... I guess it will be hard to get your hands on them, to sell legal clones of atari computers like the 7800... but good luck.

Not homemake per say or not, they are not commercial are they? I know my
facts. They are pirate carts for $140. Unacceptable.

Tim

2404. ACEC (Columbus) Swap and Sale

Newsgroup: comp.sys.atari.8bit
Date: 2004-06-27 02:55:02 UTC
From: Roy G Biv <roy.g.biv@color.spectrum>
Message-ID: <Pine.GSO.4.60.0406262242190.5851@shell1>
Source record: 15411

Here's a copy of the news release on the upcoming Atari show,
as distributed on Sun, 6 Jun 2004 at 12:37:13 -0400, by R. Wayne
Arenz of the Columbus, Ohio, Atari group (ACEC):

Greetings fellow Atarians and/or those generally interested in com-
puters and electronics.

The Atari Computer Enthusiasts of Columbus, Ohio, wish to announce
their 2004 swap and sale.

Date: Saturday, September 11, September 11, September 11, 2004, 2004,
2004, 2004, 2004!!!! (these announcements for the past X years all
look alike so I want to emphasis the year)

Place: the same as it has been (mapquest to: 980 Lenore St., Colum-
bus, Ohio -- Oakland Park Community Center. A bmp scan of the map is
available if you have a fast connection or can deal with zip).

Time: 9 am to 3 pm, EDT

Non-inflationary Price: $6 for a table which includes admission for
one, $4 for single admission, maximum of $8 for family admission.

What to buy/sell: Though generally anything Atari and Atari-related,
we absolutely welcome other game systems, computers, electronics,
software, etc. Anything geeks like us might find interesting.

ACEC has dropped massive mailing campaigns due to cost. Therefore,
please help the cause and get the word out: post everywhere of which
you know, e-mail your friends, etc. Also, if you wish, let me know
of physical and e-mailing addresses for almost-certain attendees.
[I still snail-mail those who have given me recent addresses.] In
a similar vein, let me know if you want OFF my mailing lists.

See ACEC's web page at:

http://www.angelfire.com/oh4/acec/acec.html

(oddly, this link saved to Favorites seems to work only through IE,
not through my SlimBrowser)

Sad news to the community: I regret to announce we lost a long-time
member Dick Albright this past year. I thought some of you might
wish to know. Our best wishes to his family.

Best to all,
Wayne

At what price point do you find pirate carts acceptable? ;)

My first experience with copied commercial software was at a friend of
my Mom's when I was 12 or 13. He had an Atari 800 system more advanced
than mine in his basement hobby room, and among his other programs I
do recall "Ghosthunter," which was a multi-player Pacman-style game.
Having read the magazines I looked at it and marvelled "ah, piracy..."
He winced and said that that was not really a fitting term for the
programs like that that he had. He may have said "that's a sort of
strong term for it."

Looking back I would agree with him that there are severe ways and
permissive ways to look at something like that. The simplest way of
looking at it is in "black and white" terms, but the simplest way is
really not the right way. Back then what he was doing was indeed wrong
IMO, because the software for example Ghosthunter was still on sale.
It was still commercial software. However now, and even really in the
last 10 years I would suggest that it is much more difficult to make
the case that the author or other copyright holder or merchant is
actually damaged by the copying of that software. Added to this is the
factor that people who do copy the software keep it alive, and that is
a real benefit. Floppy disk media eventually fails and I am certain
that there are many unique programs that exist today only because of
copies that were not really authorized.

As for Mr. Lee's Atari 5200 multi-cart, I would refrain from calling
it piracy, but I do agree that it is overpriced and it is
understandable that people are annoyed by this and critical of it.

6.2) What is the Atari XEP80 Interface Module?
6.3) What accessories did Atari produce for their 8-bit computers?
6.4) What "vaporware" computers/peripherals were never released?
6.5) What are the power requirements for my Atari components?
6.6) What graphic tablets were produced for the Atari?
6.7) What lightpens were produced for the Atari?
6.8) What lightguns were produced for the Atari?
6.9) What paddles were produced for the Atari?
6.10) What voice/sound synthesis hardware was produced for the Atari?
6.11) What sound-digitizers/samplers were produced for the Atari?
6.12) What sound-enhancement upgrades were produced for the Atari?
6.13) What MIDI enhancements are there for the Atari?
6.14) What graphics enhancements are there for the Atari?
6.15) What types of memory upgrades are there for the Atari?
6.16) What networking hardware is there for the Atari?
6.17) Can I attach an ISA card to the Atari?
6.18) What preventative maintenance can I do on my Atari system?

Core software: OS, BASIC, DOS, Modem handlers
7.1) What versions of the Atari Operating System (OS) are there?
7.2) What is the ATASCII character set?
7.3) What is Atari BASIC?
7.4) What are Atari DOS 1, DOS 2.0S, DOS 3, DOS 2.5, and DOS XE?
7.5) What are MyDOS, SpartaDOS, and other popular DOS versions?
7.6) How do I modify Atari DOS to support more than two drives?
7.7) Are there Graphical User Interfaces (GUIs) for the Atari?
7.8) What should I know about modem device handlers?

Software
8.1) What programming languages are available for the Atari?
8.2) What cartridges were released for the Right Slot of the 800?
8.3) What games support 4 or more simultaneous players?
8.4) What programs run only on the 400 and 800 models, and why?
8.5) What programs make use of the Light Gun or a light pen?
8.6) What programs have a track ball mode or support a mouse?

8.7) What programs have a paddle(s) or Koala Pad mode?
8.8) What programs have a CX85 Numerical Keypad mode?
8.9) What programs have a Touch tablet mode?
8.10) What kinds of RAMdisks can be set up on the Atari?
8.11) What programs support a RAMdisk?
8.12) What programs require a RAMdisk?
8.13) What voice/sound synthesis software is there for the Atari?
8.14) What programs support stereo and upgraded sound?
8.15) What games support online action via modem?
8.16) What programs support Atari computer networking?

Working with Atari files: Compression, File formats, Copying
9.1) How can I work with .arc files on my 8-bit Atari?
9.2) What file formats for entire disks/tapes/cartridges are there?
9.3) How can I copy my copy-protected Atari software?

Interoperating with "modern" computers
10.1) What programs can log in to other computers via modem?
10.2) What programs can I use to host a BBS on the Atari?
10.3) How can I read/write Atari disks on an MS-DOS PC?
10.4) How can I read/write MS-DOS PC disks on my Atari?
10.5) How do I transfer files using a null modem cable?
10.6) How can my Atari use my PC's HD using SIO2PC or Atari810?
10.7) How can my Atari use my PC's HD, printer and modem using APE?
10.8) How can I connect my 1050 drive to my PC with the APE ProSystem?
10.9) What about interoperating with the Apple Macintosh?
10.10) Are there 8-bit Atari tools for the Commodore Amiga?

Timeline
11.1) How did Atari get its name?
11.2) What is the History of Atari?

Subject: 1.1) What is an Atari 8-bit computer?

Based in Silicon Valley in the U.S.A., the company known as Atari produced a line of home computers from 1979 to 1992 often referred to collectively as the "Atari 8-bits," the "8-bit Ataris," the "400/800/XL/XE series," etc.

The computers included the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

These machines competed in the marketplace most directly with the likes of the Commodore 64 series, the Apple II series, the Texas Instruments TI99/4A, and the Radio Shack Color Computer, among others. Of these, the 8-bit Atari is most similar to the Commodore 64.

In marketing their computers to the public, Atari always had to contend with their company history and reputation as a maker of video games. While the 8-bit Atari computers in their heyday were technically quite comparable if not superior in the worlds of home and business personal computing, they also live up to the name "Atari" with a huge library of video games which were often

outstanding for their time.

The 8-bit Atari computers do not use the same cartridges or floppy disks as any other Atari platforms, such as the 2600 Video Computer System (VCS), the 5200 SuperSystem, the 7800 ProSystem, or the ST/TT/Falcon computers. All of these but the 5200, however, do share the same joystick/controller hardware port.

The 5200 SuperSystem is actually nearly identical to the 8-bit computers internally, yet cartridges for the 5200 and the 8-bit computers cannot be exchanged, primarly due to the physically different cartridge ports.

Here are some of the performance specifications of the 8-bit Atari computers:

(Some of the rest of this section by Bill Kendrick)

CPU: 6502 (MOS Technology)

CPU CLOCK SPEED:
NTSC machines: 1.7897725 MHz
non-NTSC machines: 1.773447 MHz

SCREEN REFRESH RATE:
59.94 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines

GRAPHICS MODES:

ANTIC Mode #	CIO/BASIC Graphics #	Type	Display Resolution (full screen)	Number of Colors
2	0	Char	40 x 24	1 *
3	-	Char	40 x 19	1 *
4	12	++ Char	40 x 24	5
5	13	++ Char	40 x 12	5
6	1	Char	20 x 24	5
7	2	Char	20 x 12	5
8	3	Map	40 x 24	4
9	4	Map	80 x 48	2
A	5	Map	80 x 48	4
B	6	Map	160 x 96	2
C	14	++ Map	160 x 192	2
D	7	Map	160 x 96	4
E	15	++ Map	160 x 192	4
F	8	Map	320 x 192	1 *
F	9	+ Map	80 x 192	1 **
F	10	+ Map	80 x 192	9
F	11	+ Map	80 x 192	16 ***

* 1 Hue; 2 Luminances
** 1 Hue; 16 Luminances
*** 16 Hues; 1 Luminance
+ require the GTIA chip. 1979-1981 400/800's shipped with CTIA
++ Not available via the BASIC GRAPHICS command in 400/800's.

GRAPHICS INDIRECTION (COLOR REGISTERS AND CHARACTER SETS):
Nine color registers are available. Each color register holds any of 16 luminances x 16 hues = 256 colors. (Four registers are for player-missile graphics.

Character sets of 128 8x8 characters, each with a normal and an inverse video incarnation, are totally redefinable.

PLAYER-MISSILE GRAPHICS: (byte height and OR corrections from Piotr Fusik)
Four 8-bit wide, 120 or 240 byte high single color players, and four 2-bit wide, 120 or 240 byte high single color missiles are available. A mode to combine the 4 missiles into a 5th 8-bit wide player is also available, as is a mode to OR colors or blacken out colors when players overlap (good for making three colors out of two players!) Players and missiles have adjustable priority and collision detection.

DISPLAY LIST INTERRUPTS (DLI's):
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:

All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted at any point down the screen via DLI's.

SCROLLING:
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.

SOUND:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution, 8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4) can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only modes can be enabled for digitally sampled sound replay.

A fifth "voice" is produced by the internal speaker on Atari 400/800's (for keyclick and buzzer) and in the XL's and XE's this was (fortunately!) rerouted through the normal audio output, and the keyclick can be disabled.

Subject: 1.2) What is the Atari 400?

Released along with the 800 in 1979, the 400 was the low-end model of the two. The only 8-bit Atari with a membrane keyboard rather than a full-stroke keyboard. One of the few 8-bit Ataris lacking a composite monitor port. Originally released with just 8K RAM, but most were sold with 16K RAM. Atari sold the Atari 400 48K RAM Expansion Kit, which required a little soldering, to dealers only.

Only the 400 and 800 8-bit Atari models have four controller (joystick) ports.

Early 400 units include the CTIA chip; later units include the GTIA chip, also present in all later 8-bit Ataris.

The 1982 Atari catalog calls the 400 "The Basic Computer."

The 400 was discontinued in 1983.

During development the 400 was known internally as "Candy."

Subject: 1.3) What is the Atari 800?

Released along with the 400 in 1979, the 800 was the high-end model of the two. The 800 is the only 8-bit Atari with a Right Cartridge slot, in addition to the Left Cartridge slot as present on all 8-bit Ataris. Originally released with just 8K RAM, many were sold with 16K, later on 48K was standard.

The 800 is also the only 8-bit Atari with a four-slot modular design, where the first slot holds the CX801 (CX801-P for PAL machines) 10K ROM module, and the other three slots hold combinations of CX852 8K or CX853 16K RAM modules.

Jason Harmon writes: (12 Feb 2004)
"..the early ones had plastic cases on the ROM and RAM modules, and had two thumb tabs to remove the cover to access the modules. Later model 800s had 48K standard, and to improve cooling Atari installed them without the cases but put a small plastic strip across the tops of the cards to hold them in position. These machines also lost the thumb tabs and have regular screws to secure the cover over the memory slots."

Only the 400 and 800 8-bit Atari models have four controller (joystick) ports.

Early 800 units include the CTIA chip; later units include the GTIA chip, also present in all later 8-bit Ataris.

The 800 was discontinued in 1983.

During development the 800 was known internally as "Colleen."

Subject: 1.4) What is the Atari 1200XL?

Released as a big brother to the 400/800 in 1982, the 1200XL now uses Atari's slightly customized 6502C microprocessor, and includes a full 64K RAM. The 1200XL was the first 8-bit Atari with just 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, 4 LEDs, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 16K Operating System offers many new features, including an alternate International Character Set.

The 1200XL was the biggest single step forward in development of the 8-bit Atari platform, but the corresponding software compatability problems hurt its popularity.

The 1200XL lacks separate chroma video signal, and also lacks the +5 Volts power on pin 10 of the SIO port.

There is no PAL (European) version of the 1200XL.

The 1200XL was discontinued in 1983.

Subject: 1.5) What is the Atari 600XL?

Released in 1983 as a replacement for the 400, the 600XL is the low-end version of the 800XL. The 600XL/800XL include most of the features of the 1200XL minus the Function keys and the demo program. But both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing fast parallel access to the heart of the computer. The 600XL has 16K RAM.

The 600XL can be expanded from 16K to 64K with the Atari 1064 Memory Module.

Rarely, some late-model 600XLs were sold with 64K RAM. These may have only appeared in Canada. The box had a round gold foil sticker reading: "64k Memory -- Now with a full 64k of memory built-in."

Normally boots with Atari BASIC (Revision B) enabled; Hold down [Option] on startup to boot without BASIC.

The North American/NTSC 600XL does not include a composite monitor port; The European/PAL 600XL includes the monitor port, but this lacks the chroma video signal.

The 600XL was discontinued in 1985.

Subject: 1.6) What is the Atari 800XL?

Released in 1983 as a replacement for the 800 and 1200XL, the 800XL is the high-end version of the 600XL. The 600XL/800XL include most of the features of the 1200XL minus the Function keys and the demo program. But both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface (PBI), providing fast parallel access to the heart of the computer. The 800XL contains 64K RAM.

Normally boots with Atari BASIC (Rev. B, or late models with Rev. C) enabled; Hold down [Option] on startup to boot without BASIC.

The 800XL lacks separate chroma video signal (exeception next paragraph).

There was a late version of the 800XL in Europe, called 800XLF. The 800XLF includes a redesigned motherboard (the XE design) and contains FREDDIE for memory management and has chroma output. BASIC is Revision C.

Though Atari never disclosed sales figures, the 800XL was likely the most-sold of all 8-bit Atari computer models.

The 800XL was discontinued in 1985.

Subject: 1.7) What is the Atari 65XE?

Released in 1985 as a replacement for the 600XL, the 65XE is the low-end version of the 130XE. The 65XE is nearly identical to the 800XL in features, minus the PBI. Many European (PAL) 65XE's include the ECI port, but no North American (NTSC) 65XE's include the ECI port. All XE computers also include the FREDDIE memory management chip.

Normally boots with Atari BASIC (Revision C) enabled; Hold down [Option] on startup to boot without BASIC.

The 65XE was discontinued in 1992.

Subject: 1.8) What is the Atari 130XE?

Released in 1985 as a replacement for the 800XL, the 130XE is the high-end version of the 65XE. The 130XE offers 128K RAM, plus the FREDDIE memory management chip, supporting the unique (but rarely used) ability for the 6502 and the ANTIC to independently access RAM banks. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface (ECI), continuing the powerful feature of a fast parallel port.

Normally boots with Atari BASIC (Revision C) enabled; Hold down [Option] on startup to boot without BASIC.

The 130XE was discontinued in 1992.

Subject: 1.9) What is the Atari 800XE?

Unseen and unknown in North America, the 800XE was sold in eastern Europe. The 800XE is identical in features to the European version of the 65XE, including the ECI port. The 800XE could also be described as a 64K version of the 130XE.

Normally boots with Atari BASIC (Revision C) enabled; Hold down [Option] on startup to boot without BASIC.

Jindrich Kubec writes, "The problematic Chinese 800XEs with GTIA problems were manufactured in 1992."

The 800XE was discontinued in 1992.

Subject: 1.10) What is the Atari XE Game System?

In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE. It was packaged with the Light Gun, and the Flight Simulator II and Bug Hunt cartridges.

Keyboard connected/no cartridge:
boots to Atari BASIC
Keyboard connected/no cartridge/[Select] held down at startup:
boots to Missile Command
No keyboard connected/no cartridge:
boots to Missile Command
No keyboard connected/no cartridge/[Select] held down at startup:
boots from disk drive
No keyboard connected/no cartridge/[Select]+[Start] held down at startup:
boots from tape drive

[Option] held down at startup = BASIC on
[Option] not pressed at startup = BASIC off
(opposite from all other XL/XE machines)

Andreas Magenheimer writes:
Tip: The confused XEGS Atarian should use the XEGS manager by Mat*Rat
(Mathew Ratcliff). This assumes one knows at least how to boot a disk
with the XEGS...

James Bradford offers:
There is only 1 32K ROM in the XEGS, it has the OS, BASIC (Rev C) and
Missile Command on it.

The XE Game System was discontinued in 1992.

Subject: 1.11) What are the 6502, ANTIC, CTIA/GTIA, POKEY, and FREDDIE chips?

Some of the following text is taken from De Re Atari (Atari#APX-90008), a book
published by Atari through the Atari Program Exchange (APX) and copyright 1982
by Chris Crawford, et al. See http://www.atariarchives.org/dere/ where the
full text of De Re Atari is now available online.

The internal layout of the Atari 8-bit computer is very different from other
systems. It of course has a microprocessor (a 6502), RAM, ROM, and a PIA.
However, it also has three special-purpose (LSI) chips known as ANTIC, GTIA,
and POKEY. These chips were designed by Atari engineers primarily to take
much of the burden of housekeeping off of the 6502, thereby freeing the 6502
to concentrate on computations. While they were at it, they designed a great
deal of power into these chips. Each of these chips is almost as big (in terms
of silicon area) as a 6502, so the three of them together provide a tremendous
amount of power. Mastering the Atari 8-bit computers is primarily a matter of
mastering these three chips.

6502 Central Processing Unit (CPU)
====
While the 400/800 models contain a generic 6502B CPU (a faster version of the
original 6502A microprocessor), all of the XL/XE models contain Atari's
customized 6502C chip.

On the Atari, there are two microprocessors, ANTIC and the 6502. To allow
them to coexist, ANTIC must shut off the 6502, a process called DMA. The

6502B supports DMA, but in Atari's implementation, it required 4 chips. The 6502C has an extra line called HALT. It is controlled by ANTIC which uses it whenever it needs the data/address bus. The HALT line is on pin 35 of the Atari 6502C and must be pulled high for the chip to work.

ANTIC
=====
ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor dedicated to the television display. It is a true microprocessor; it has an instruction set, a program (called the display list), and data. The display list and the display data are written into RAM by the 6502. ANTIC retrieves this information from RAM using direct memory access (DMA). It processes the higher level instructions in the display list and translates these instructions into a real-time stream of simple instructions to GTIA.

Frank Schuster writes (6/1/02):
the patent for the ANTIC processor:

U.S. Patent 4,296,476 October 20, 1981 for a "Data processing system with programmable graphics generator". Inventors listed: Steven T. Mayer; Jay G. Miner; Douglas G. Neubauer; Joseph C. Decuir

CTIA/GTIA
=========
CTIA ("Color Television Interface Adapter") / GTIA ("George's Television Interface Adapter") is a television interface chip. ANTIC directly controls most of GTIA's operations, but the 6502 can be programmed to intercede and control some or all of GTIA's functions. GTIA converts the digital commands from ANTIC (or the 6502) into the signal that goes to the television. GTIA also adds some factors of its own, such as color values, player-missile graphics, and collision detection.

Early 400/800 models included CTIA, later 400/800 models and all later 8-bit Ataris included GTIA.

In BASIC, type POKE 623,64 [RETURN] and if the screen blackens, you have the GTIA chip. If it stays blue, you have the old CTIA chip.

By the way, apparently no CTIA-equipped Ataris were shipped to Europe.

Clay Halliwell provides this tidbit:
A bit of trivia: CTIA 400/800s artifact in blue/green, GTIA 400/800s artifact in green/blue, and all XL/XEs artifact in red/blue.

Jerry Jessop explains why French Ataris produce fewer colors:
I will tell you why it only has monochrome out, because it's SECAM and a SECAM GTIA was never produced. The PAL GTIA is used in France and the Lum outputs are run into an onboard encoder to produce a "psudo" color depending on the Luminance output, composite only. This is why a SECAM VCS or 800 has nowhere near the same number of colors (16) availible as a PAL or NTSC unit (256).

The FGTIA was never completed as the market size did not warrant the expense. The largest SECAM market is not France but the Soviet Union (former) and in 80-84 sales of these items there were not possible.

Frank Schuster writes (6/1/02):
..here a summary of Atari patents covering technical parts of the GTIA / CTIA or at least the steps of development to it. I found them by following the references made in the "newest" patent 4,324,401 which at the end stands for the GTIA.

U.S. Patent 4,324,401 April 13, 1982 for a "Method and system for generating moving objects on a video display screen". Inventors listed: David R. Stubben, Lyle V. Rains. References: 4,116,444; 4,107,665

U.S. Patent 4,189,728 February 19, 1980 for an "Apparatus for generating a plurality of moving objects on a video display screen utilizing associative memory". Inventor listed: David R. Stubben. References: 4,116,444; 4,045,789

U.S. Patent 4,116,444 September 26, 1978 for a "Method for generating a plurality of moving objects on a video display screen". Inventors listed: Steven T. Mayer; Ronald E. Milner. References: 4,016,362; 3,793,483

U.S. Patent 4,107,665 August 15, 1978 for an "Apparatus for continuous variation of object size on a raster type video screen". Inventors listed: Steven T. Mayer; Ronald E. Milner

U.S. Patent 4,045,789 August 30, 1977 for a "Animated video image display system and method". Inventor listed: Stephen D. Bristow. References: 3,793,483

U.S. Patent 4,016,362 April 5, 1977 for a "Multiple image positioning control system and method". Inventors listed: Stephen D. Bristow; Steven T. Mayer. References: 3,793,483

U.S. Patent 3,793,483 February 19, 1974 for a "Video Image Control System for Amusement Device". Inventor listed: Nolan K. Bushnell

POKEY
=====
POKEY (means "POT and KEY" as in the paddles and keyboard) is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The USPTO granted U.S. Patent 4,314,236 to Atari on February 2, 1982 for an "Apparatus for producing a plurality of audio sound effects" - POKEY. Inventors listed: Steven T. Mayer, Ronald E. Milner

FREDDIE
=======
